Commission of Inquiry

Into the Wrongful

Conviction of David Milgaard

before

THE HONOURABLE MR. JUSTICE

EDWARD P. MacCALLUM

Transcript of Proceedings

and

Testimony before the Commission sitting at the

Delta Bessborough Hotel at

Saskatoon, Saskatchewan

On Wednesday, February 1st, 2006

Volume 116

Inquiry Proceedings

Commission Staff:

Mr. Douglas C. Hodson, Commission Counsel

Ms. Candace D. Congram, Executive Director

Ms. Sandra Boswell, Document Manager

Ms. Kara Isabelle, Document Assistant

Ms. Jodie Kendry Document Assistant

Support Staff:

Ms. Irene Beitel, Clerk to the Commission

Ms. Karen Hinz, CSR, and Official Q.B. Court Reporters

Mr. Don Meyer, RPR, CSR,

Mr. Jerry Wilde, Security Officer

Mr. Larry Prehodchenko, Inland Audio Technician

Appearances:

Mr. Hersh Wolch, Q.C., for Mr. David Milgaard

Ms. Joanne McLean, for Ms. Joyce Milgaard

Ms. Lana Krogan, for Government of Saskatchewan

Ms. Catherine Knox, for Mr. T.D.R. (Bobs) Caldwell

Mr. Jay Watson, Esq., for Mr. Serge Kujawa

Mr. Pat Loran, Esq., for the Saskatoon Police Service

Mr. Chris Boychuk, Esq., for Mr. Eddie Karst

Mr. Bruce Gibson and Ms. Rochelle Wempe, for the RCMP

Mr. Eamon O'Keefe, Esq., for Mr. Larry Fisher

Ms. Jennifer Cox, for Minister of Justice

(Canada), The Hon. Irwin Cotler

Mr. Alexander Pringle, Q.C., and Marshall Hopkins, Esq.,

for Justice Calvin Tallis

(Retired)

1 Transcript of Proceedings 2 (Reconvened at 9:00 a.m.) 3 COMMISSIONER MacCALLUM: 4 JAMES ALEXANDER JOHNSTON FERRIS, continued: 5 BY MR. HODSON: I'll ask Dr. Ferris to return to the stand. 6 Q Good 7 morning, Dr. Ferris. Yesterday when we adjourned we 8 9 were just talking about the work that you were 10 doing in 1997 relating to the DNA and I think you 11 told us a bit of the history of your lab, you 12 described it as a research lab rather than a 13 forensic lab; is that correct? 14 That's correct. Α 15 And I just want to go through that a bit further. 0 16 What would be -- a forensic lab, the purpose of 17 that would be to do work with the purpose of 18 presenting your results in court; is that correct? 19 That's correct. All of the forensic science 20 laboratories that I'm aware of in Canada are 21 responsible for the collection and analysis of 22 samples submitted to them, the purpose of which is 23 ultimately the presentation of evidence in court.

And would there be, for a forensic laboratory, a

protocol or a set of rules about the handling of

24

1		exhibits, the transferring of exhibits and the
2		dealing with exhibits?
3	А	Yes, there is, there are extremely strict
4		protocols, even to the extent of maintaining lab
5		books and records with regard to everything that
6		has been done. In particular, in forensic
7		laboratories careful documentation is made of all
8		of the individuals who handle and test samples.
9	Q	For example, the issue of continuity with an
10		exhibit would be important for a forensic lab to
11		ensure that the who had the exhibit at all
12		times; is that right?
13	А	That's correct.
14	Q	And would there be also a concern about
15		contamination so that steps would be taken to
16		ensure that there's not cross-contamination or
17		contamination of an exhibit?
18	А	Yes. Even in the early days that would have been
19		standard to most of the protocols.
20	Q	And am I correct that one of the purposes of that
21		is so that if your forensic work resulted in
22		evidence that would have to be put forward in any
23		type of legal proceeding, that you as a forensic
24		pathologist or as a scientist could come forward
25		and say from the moment I received this exhibit I
		4

1 can tell you exactly what happened to it, where it 2 was, what was done with it and I now have it? 3 Α Yeah. 4 0 And here's all the notes to cover everything that was done? 5 That's correct. 6 Α Now let's talk about a research lab. Q same, would the research lab have the same 8 9 concerns or reasons as a forensic lab about 10 continuity, avoidance of contamination, etcetera? 11 Α Well -- excuse me. Not all laboratories, not all 12 research laboratories would have those concerns, 13 but I was a trained forensic pathologist. We were 14 engaged in what we thought of as forensic research 15 and because there were so few people involved in 16 the laboratory work on a day-to-day basis, it was 17 a total of four people, we did in fact keep 18 records that would have been similar to the 19 records kept by a forensic science laboratory, but 20 would not have been necessarily within their 21 standard format, but we knew that any results that 22 we had obtained in our research project would be 23 subject to quite intense peer review. We were 24 hoping that if we did produce publishable results 25 on DNA degradation, that in fact it could then

А

become part of forensic laboratory protocols, so that although we were not actually a forensic laboratory, I think we would, we were doing things that would have met the standards that would be normally expected of a forensic science laboratory.

Q And do I take it from that that your objective

when you undertook the work with respect to the Gail Miller exhibits, that your objective, if things went well, was to publish a paper or some type of document on the issue of DNA degradation? No, I don't think that particular case would necessarily have become part of our research publications. We may, with appropriate consent, probably from Mrs. Milgaard and from David, we might have been able to use that case as a case example to justify the work that we were doing or to give an example of the type of degradation that we were recognizing in our research, but we weren't -- we really hadn't considered that. were doing this case simply because of our own interest in degradation and we were interested to see whether, in a sample that was an historic sample, that we had some idea of how the sample

had been obtained in the court registry in

1		Saskatoon, that it was interesting for us to see
2		what sort of degradation was occurring.
3	Q	And so from your lab's perspective, to take an
4		exhibit that was 20 years old, look at it and look
5		at the degradation issue, that was your focus and
6		interest as a researcher; is that correct?
7	А	That's correct, although clearly we were doing the
8		actual examination at the request of Mrs. Milgaard
9		to see whether or not we could obtain any results
10		that might assist her.
11	Q	And a result that might assist her would be, for
12		example, if you could get DNA, enough DNA from the
13		clothing, compare it to David Milgaard's DNA and
14		if it did not match, then that would be something
15		that might be of assistance to her?
16	A	That's correct.
17	Q	And if that had happened, based upon the work that
18		your research lab had done, would that have been a
19		result that would be the equivalent of what a
20		forensic scientist would do and would present in
21		court or would further, would further steps need
22		to be taken?
23	А	I think obviously we never got that far, but
24		certainly at that time it was in my mind that if
25		we got an interpretable negative result, which was

1 what we were effectively looking for, a sample 2 that did not match, I would have reported back to 3 Mrs. Milgaard and Mr. Wolch and would have said look, these results indicate that this is not 4 5 David's sample and that I think you need now to get it properly tested in a reputable DNA 6 laboratory, some of which were available, and 8 probably in those days the only place to go would 9 have either been the home office in Britain or the 10 FBI. 11 So do I take it from that, and I mean no 12 disrespect, but you said you would then have it 13 tested in a reputable DNA lab. Was your research 14 lab a reputable -- let me take out the word 15 Was it a DNA lab? reputable. 16 Well, we were a DNA research lab. I think --А 17 remember, for expert testimony to be given in 18 court, particularly in North America, the 19 technology has to be proven, it has to be 20 established and it has to be given by trained 21 people who have experience of giving this evidence

reproducibility, even the statistics were

in court. I mean, for the first five years of the

presentation of DNA evidence almost every single

case was challenged on the issue of credibility,

22

23

24

1		challenged, and we simply would not have been up
2		to that, that was not our area of interest, and I
3		think we would have been misleading people if we
4		claimed that we could do that.
5	Q	So if you would have had a result that you could
6		match and it excluded Mr. Milgaard, am I correct
7		that what you are saying is that you, Dr. Ferris,
8		would not have come forward and said here's my
9		opinion, this DNA does not match, I exclude David
10		Milgaard as a suspect, things of that nature?
11	Α	Well, if I had said that, it would have been
12		simply as a preliminary study. I would probably
13		have said this sample does not appear to match and
14		this sample is inconsistent with David within the
15		criteria of our laboratory.
16	Q	So and I think you said earlier, you talked
17		about a preliminary test, so is your work simply
18		an initial screening then to see if the DNA lab,
19		another DNA lab could do further work, is that
20		what you are telling us?
21	А	Yes, but the problem is of course we never got
22		that far. I'm sure Mrs. Milgaard was hoping that
23		we could come out with a black and white answer
24		and if we had got a black and white answer, it's
25		hard to say exactly what would have happened, but
		Movey CompuCourt Paparting

1 I know from my own forensic experience in those 2 days that I would have wanted someone else to, at the very least, back up our results and probably 3 4 take them over. 5 Q You told us that at that time, you said the reputable DNA labs would be the home office in 6 Britain and the FBI lab. Can you tell us if you have any knowledge, what would they have done or 8 9 be doing at that time that you weren't doing in 10 your lab, like, what would the difference be? The biggest difference would be the number of 11 Д 12 cases that they were dealing with which gave their 13 cases -- they had case experience, they were 14 dealing with multiple cases. They were also 15 developing the technology, remember there was 16 different technology being used on both sides of 17 the Atlantic, but they were working towards the 18 same end, and within their own laboratories they 19 were reproducing good enough results to be, by 20 that stage, beginning to be tested in court. 21 And if we could just go back to some of the 22 ancillary work then that would be part of -- let's 23 talk about the forensic work of testing Gail 24 Miller's clothing, I think you talked about 25 extracting, or attempting to extract DNA. What

1 about tests to determine the identity of the 2 substance, to determine whether it's semen, things 3 of that nature, what other lab tests would need to be done as part of a forensic review of Gail 4 5 Miller's clothing to see whether or not, (a), you could extract DNA, and (b), whether you could 6 match it with David Milgaard's DNA? Well, if a forensic scientist approached that 8 sample and I, you know, to some extent I can't 10 speak for forensic scientists working in a 11 laboratory, but their protocol would have been first of all to establish that the stain that they 12 13 were looking at was probably semen and they would 14 have done screening tests for that, they would 15 have done ultraviolet florescence which gives an 16 indication of a seminal stain, they would probably 17 have looked for sperm heads or sperm tails --18 COMMISSIONER MacCALLUM: I'm sorry, you 19 were blocked out, I'm sorry, sir. Just repeat 20 that again? 21 They would have done screening tests, Α I'm sorry. 22 they would probably have done ultraviolet 23 florescence which will help identify a possibility 24 of semen, they will have looked for the presence 25 of sperm heads and tails and then they will have

1		gone with the extraction process.
2		BY MR. HODSON:
3	Q	Okay. Now what did your labs so let me just
4		back up so that I understand this. The process
5		would be, I think you've identified three methods
6		to try and identify substance?
7	А	Yes.
8	Q	Umm
9	A	There are other chemical tests that could be used
10		such as acid phosphatase.
11	Q	And what did your lab do, then, in 1987-1988?
12	A	Well we were not set up to do any of those
13		screening tests, and since we were only concerned
14		with the identification of DNA,
15	Q	Yes?
16	А	we fluoresced the sample, we selected an area
17		that appeared to show fluorescence and therefore
18		could have been semen, and we took that sample and
19		extracted it. But we did not try to prove, before
20		we extracted DNA, that that was semen.
21	Q	And do I understand, from that, that if a forensic
22		lab had been doing the work they would have
23		started with that, to try and identify the
24		substance, and would have done the the acid
25		phosphatase I'm not going to pronounce it
	Ĭ	

1		right the acid P test? What explain what
2		that is?
3	А	This is a method of detecting an enzyme which is
4		present in large amounts in semen, and although
5		it's present in some other tissues it's got high
6		concentrations in semen and is relatively easy to
7		detect, and it's a very good screening test for
8		semen.
9	Q	And does it in any way damage the garment if you
10		do this acid phosphatase what is it
11		phosphatase?
12	А	Phosphatase.
13	Q	Phosphatase. If you did an acid phosphatase test
14		on the panties would that, in any way, harm the
15		garment for future testing?
16	А	Almost certainly not.
17	Q	Okay. So let's just go back to the work that your
18		lab did. Am I to understand, then, that you took
19		the panties, and that it would be visually using
20		the you talked fluoresce, that's
21	А	That's correct.
22	Q	I take it that's an ultraviolet light?
23	A	It's a ultraviolet lamp which fluoresces
24		particular types of protein.
25	Q	And so, based on that, the you believed, then,

		——————————————————————————————————————
1		that there was semen, or what appeared to be
2		semen, on the panties; is that right?
3	А	Yes.
4	Q	And that's where you focused your attention, and I
5		think the reports indicate you cut out one or two
6		pieces of cloth, is that right?
7	А	Correct.
8	Q	And did you do the acid phosphatase test on the
9		panties?
10	А	No, we did not.
11	Q	And why; would there be a reason you didn't do
12		that?
13	А	We simply were not set up to do that. We could
14		have done it, but again, it was as I said at
15		the beginning, we were not doing this as a primary
16		forensic investigation, we were doing this simply
17		to see if we could link DNA from David Milgaard
18		with stains on the clothing retrieved from Gail
19		Miller.
20	Q	Okay. Now let's just turn our attention to the
21		or let me just pause on the panties. It's my
22		understanding then that based on the work that you
23		did and what you extracted, that there was not
24		enough nuclei or material in what you extracted
25		from the panties to allow you to get a reliable
		3.

1		DNA graph, is that the right word, or plate?
2	A	A DNA plate. The normal, identifiable pattern of
3		
		DNA that you see on an x-ray plate when you have
4		separated the DNA fragments is quite
5		characteristic and allows you to match and compare
6		one sample with another. It's a sort of, it's
7		almost like a simplified bar code this was the
8		method we were using and you can compare the
9		lines, where they are, across the bar code system.
10		What was happening with us was
11		that instead of getting nice, identifiable, clean
12		lines in the bar code we were getting smears, and
13		the smears represented degradation of DNA. There
14		was a possibility that the beginning of the smear
15		might have represented something of significance,
16		because we were seeing that in comparable research
17		samples, but we couldn't be sure, and as we went
18		through the tests we came the conclusion that we
19		were not getting an interpretable result. It
20		appeared to be DNA but we couldn't interpret it.
21	Q	And so did you then stop the work on the DNA?
22	A	Yes, we did.
23	Q	And so was it a question of let me just back up
24		then. In simple terms, if you would have had more
25		substance to work with, would that have assisted $lacktriangle$

1		you in getting something that you could use to
2		match?
3	А	I doubt it. We might have been. Remember, we had
4		very limited experience of looking at this type of
5		sample, and I think once we identified the
6		problems that were, we thought, beyond us, we
7		decided it was best to leave it.
8	Q	What do you mean by "beyond us"?
9	А	That we simply didn't have the techniques yet
10		developed which would allow us to get rid of the
11		breakdown products and the, what might possibly
12		have simply been contamination.
13	Q	All right.
14	A	Because we couldn't even say whether the smearing
15		was due to the breakdown of the DNA or the
16		smearing was due to contamination and breakdown of
17		other products such as bacteria. I mean we were
18		this was what our research was about, was to
19		try and see if we could sort this out.
20	Q	When you say "it was beyond us", did others in the
21		field with perhaps different focuses or different
22		specialties have greater abilities to try and
23		unsmear the smear, if I can put it that way?
24	A	They might have. I don't know. Because certainly
25		the FBI were doing research in conjunction with
		Meyer CompuCourt Reporting Certified Professional Court Reporters serving P.A. Regina & Saskatoon since 1980

1		some of their routine work, because they were
2		actually testing different methods of doing DNA,
3		and some of them were giving better results than
4		others, and I don't know whether another lab might
5		have been able to do it.
6		Remember, the technology was
7		advancing extremely fast. These samples were
8		looked by us, looked at by us, I believe, at the
9		beginning of 1988.
10	Q	Yes.
11	A	I suspect that even within another 12 months, if
12		we had had an opportunity to re-examine them, we
13		might have got better results. But, by that time,
14		we were no longer really in a position to do
15		samples, and it was much better that the samples
16		would then be tested by laboratories that were
17		advancing the science specifically for the
18		purposes of forensic examinations.
19	Q	Right. Now let's just talk about Gail Miller's
20		dress, that was one of the exhibits that was sent
21		to you by the Court; is that correct?
22	A	That's correct.
23	Q	What, if anything, did you and your lab do to
24		examine the dress?
25	A	We looked at the dress and we simply decided that
	İ	

1		it was too big a garment for us to attempt to
2		identify potential stains.
3	Q	Did you do a fluorescent test of the dress to see
4		if there was any semen or substance on the dress?
5	А	I can't recall. I know we looked at the dress but
6		I can't recall whether we fluoresced it.
7	Q	And did you do an acid phosphatase test?
8	А	No.
9	Q	Now we know from reports, and we'll hear
10		subsequent evidence, that in 1997, when the DNA
11		testing was done again, that semen and sperm were
12		found on the dress. And I'm wondering if that
13		are you able to tell us, Dr. Ferris, whether the
14		techniques you had at the time, in 1988; would you
15		have been able to detect semen on the dress?
16	A	Umm, we might have been able to. I suspect that
17		probably a forensic science laboratory that is
18		accustomed to doing this type of clothing
19		examination would have been able to do that but,
20		you know, in retrospect I'm very glad we didn't
21		extract or cut pieces out of that dress because we
22		you know, it was bad enough us removing some
23		potentially significant samples way back in 1988
24		and, fortunately, leaving enough materials to be
25		further identified.

Q

What do you say "it was bad enough"; what do you

2		mean by that?
3	A	Well I mean this is in hindsight, I mean we were
4		doing our best at the time, but clearly we I
5		think nobody anticipated how advanced and how
6		sensitive DNA technology would become, and I think
7		if we had known that we wouldn't we would have
8		simply left it for another few years.
9	Q	I see. When did your lab, I think you told us
10		yesterday that your lab, your research lab shut
11		down?
12	A	Yes, we began closing the lab in 1989.
13	Q	And why was that?
14	A	Well, first of all the research funding, we had a
15		grant for two years from the Law Society of
16		British Columbia and from the provincial
17		government. We then decided that we would try and
18		fund the lab by doing paternity testing, and we
19		were certainly capable of doing that and that
20		would allow us to continue with our research, but
21		there was a company in British Columbia that had
22		obtained the patent for this type of testing and
23		was already set up as a paternity testing
24		laboratory and was offering a commercial service
25		for this, and after some somewhat difficult

1 meetings between the company executives and the 2 university and myself it was decided that we would 3 stop doing the paternity testing, which meant effectively that we had no funding to continue our 4 5 research, and my DNA research in fact stopped completely until the mid-'90s when I got 6 additional funding from a private company to carry 8 on in a different area, once again looking at DNA 9 degradation, but this time in terms of using DNA 10 degradation to identify time since death. And so the work that you did on Gail Miller's 11 12 clothing, the analysis that you did, was that of 13 assistance in your research in looking at the 14 issue of degradation? 15 No, except it was simply a case example that, if Α 16 you like, we could use to justify the research. 17 If we could go to 182095, please. And this is a 0 18 memorandum, I think from David Asper, that just 19 puts a date on things, February 26th, 1987. 20 it's referring to a telephone call he had with 21 Joyce Milgaard about -- and I think she became 22 aware of this genetic fingerprinting, and I think 23 you told us yesterday that your research work or 24 what you were doing had been in the news or had 25 been in the media, is that right, around this

1		time?
2	А	Yes, they the publicity related in part to the
3		research funding that had been given by the
4		British Columbia Law Society.
5	Q	If we can then go to 155420. And this is a letter
6		from Mr. Wolch to you that I think is your
7		original set of instructions, and it references
8		discussions first with Joyce Milgaard and David
9		Asper; do you have a recollection of what, what
10		would have been the nature of those initial
11		discussions?
12	A	Umm, I don't remember very much other than
13		Mrs. Milgaard phoning me and giving me a very
14		brief outline of the case and telling me that
15		David was prepared to submit blood samples for
16		comparison purposes, and I was impressed by that
17		offer, and it seemed to me that it gave some
18		credibility to her claims and it certainly
19		justified my efforts in trying to take on the
20		case.
21	Q	Okay. And what did you tell her you could do?
22	A	I can't remember. I hope I did not promise too
23		much, but I certainly told her that we would try,
24		but I can't remember exactly what we said.
25	Q	And "try"; and is it correct to say that you would

1		try to do a comparison to either exclude Mr.
2		Milgaard, or I suppose the other option is it
3		could be a match?
4	A	That's correct.
5	Q	And I think Mrs. Milgaard was asking you to do
6		that, that was the objective, to do the matching,
7		to do
8	A	That's right. And she certainly placed no
9		conditions on our testing, which I know that I
10		made it aware to her that I could not guarantee
11		that there would be a result that would
12		necessarily please her.
13	Q	And what about; did you make any comments or what
14		did you tell her about your confidence or optimism
15		in being able to get DNA material from a
16		20-year-old exhibit or an 18-year-old exhibit?
17	A	I can't remember what I said, I hope I was not too
18		optimistic, but I may well have told her that we
19		would do our best.
20	Q	And so again, if we can just scroll down just to
21		the bottom of this paragraph, up to the first
22		paragraph. Mr. Wolch, it appears he has already
23		talked to the Crown office about getting:
24		" the panties of the victim which
25		contained traces of semen plus viles of
		4

frozen substance which we are advised

'		110Zen Substance which we are advised
2		are semen and were found at the scene of
3		the body."
4		Let me pause there. We have heard a fair bit of
5		evidence that there were two frozen lumps of
6		semen found at the scene of the crime and were
7		analysed by the RCMP at the time. It's my
8		understanding that those vials were sent to you
9		in 1988, from the Court exhibits, and were found
10		by you to be dried up; is that correct?
11	A	Umm, they were, as far as we were concerned, empty
12		and appeared to be clean.
13	Q	I see. So no residue at all?
14	А	Not that I recall. We did nothing with those
15		tubes other than just visually examine them.
16	Q	I see.
17	A	And, remember, in those days you had to have a
18		visually-identifiable sample in order to test it.
19	Q	Okay. And then just scroll down. Mr. Wolch says:
20		"In other words, I am seeking from you
21		at this point your assistance as to what
22		steps we should take in this rather new,
23		to the writer at least, area."
24		And is that fair that Mr. Wolch was asking you
25		"what do you need us to do for you to do your
		1

1		work"?
2	A	Yes.
3	Q	And if we can go to 267809, and this is your
4		letter of August 24, 1987 back to Mr. Wolch, and I
5		just want to go through parts of this. The second
6		paragraph you say:
7		"You have asked me whether or not it
8		might be possible to apply the new
9		techniques of DNA genetic typing to your
10		case to see whether or not it would be
11		possible to associate or exclude the
12		stains on the panties of the victim with
13		other samples obtained at the scene."
14		And I'm wondering, at this point, the "other
15		samples obtained at the scene" might have been
16		the vials of frozen semen; would it not also
17		relate to David Milgaard's sample?
18	A	Umm, the sample that I was receiving, or going to
19		receive from David, was a sample that was going to
20		be taken from him in prison.
21	Q	Yeah. I'm sorry, let me rephrase that. When I
22		looked at that I thought what you had told us was
23		that you were going to look at the stain on the
24		panties of the victim to see if you could
25		associate or exclude that stain with David
	Ĥ.	

1		Milgaard's DNA as opposed to other samples at the
2		scene?
3	А	Umm, yes, in fact it was we were going to look at
4		all of the samples and compare them.
5	Q	Okay. If we can just scroll down. And I think
6		you talk here about:
7		"DNA genetic typing has not",
8		reached:
9		" the point of routine service within
10		the forensic community. Nevertheless,
11		in Vancouver we are actively engaged in
12		a research and development program and
13		hope to be in a position to present
14		evidence in court within twelve months."
15		And was that your plan at the time then?
16	A	Yes, it was.
17	Q	And so that would be to convert it into a forensic
18		lab?
19	А	Yes. It was a question, then we were, we actually
20		were discussing with the RCMP in Vancouver how we
21		might liaison this, with this, and one of the
22		options that we considered, but I don't think the
23		RCMP seriously considered, was that in fact we
24		would provide a DNA lab for the RCMP.
25	Q	Okay. So this did not happen I take it?

1	A	It did not happen.
2	Q	If we can go to the next page, please. And you
3		talk here about:
4		"The handling of the samples and the
5		transportation of the samples would be
6		best done as for any other forensic
7		sample and I believe should be sent to
8		Vancouver by courier in a sealed
9		container.",
10		and then about deep-freezing, etcetera. So would
11		that be the protocol that you would have used for
12		a forensic lab?
13	A	That those are the protocols that we use for
14		the handling of samples, and I think that's the
15		way samples are handled by between the forensic
16		science laboratories, although often they will use
17		couriers that the police have agreements with.
18	Q	What we have seen in 1992, when they did some
19		testing, is Sergeant Pearson of the RCMP
20		physically took custody of the exhibits, flew down
21		to North Carolina, I think kept them in his room,
22		took them to the lab, took them back, took them on
23		the airplane with him, and brought them back, and
24		is that would that have been different than
25		what your research lab was

A	Well clearly, in terms of continuity, it would be
	preferable. But remember, dealing with us, with a
	small research lab staffed entirely by a
	technologist and a research fellow, it would not
	have been possible for us to have gone to
	Saskatoon to get the samples and I my
	understanding at the time was that the Court
	registry were the ones who were going to make the
	arrangements to have the samples
0	I see.

- sent.

And then, if we can just scroll down, it -- you say:

> "I have spoken to Mrs. Milgaard on a number of occasions by telephone and I have cautioned her about expecting too much from these results. There are many reasons why the tests may not be helpful. While it is possible that we could reasonably exclude David Milgaard, it is also possible that the testing, because of the age of samples and the technical problems associated with the handling of a case so many years after the event, might not allow for the

Meyer CompuCourt Reporting =

1		exclusion of David Milgaard."
2		And would that be a fair summary of what you
3		would have talked to Mrs. Milgaard about?
4	А	I think so, yes.
5	Q	Did you have, going into this "experiment" is
6		probably the wrong word into this task, did
7		were you optimistic or doubtful as to whether or
8		not you could get anything from the clothing?
9	А	Umm, I think I was hopeful. "Optimistic" is
10		certainly not, is too strong a word, but I was
11		hoping that we might be able to do it.
12	Q	And, based on the research that you had done to
13		date on degradation of DNA samples, did you have
14		any views about whether a, I guess, 20-year or
15		probably 18-year-old sample might have degradation
16		problems?
17	A	Well we knew there would be degradation problems,
18		but we also knew that drying of DNA is actually
19		one of the means of preserving it, so we simply
20		didn't know how much DNA would be preserved and
21		how much would be degraded.
22	Q	Then, if we can go to 001585, this is an
23		affidavit if we can go to the next page,
24		please it's an affidavit that Mr. Wolch filed
25		on or swore November 9th, 1987. This was to
		•

get a court order to get the exhibits from the Court. If we can just go to the next page, paragraph 5 and 6, first if we can go to paragraph 5:

"... I am informed and do verily believe that there is a new system of "DNA genetic typing", the results of which have been entered as evidence in English courts (see Exhibit "A" attached) and which is presently available in the experimental stages in Canada, which will be of assistance in David

Milgaard's application for clemency."

And if we could go to 001590, this is Exhibit A, and if we could just call this up. This is an article in the London *Times*, *The Sunday Times*, August 2nd, '87, and you told us yesterday about Dr. Alec Jeffries, who I think was the pioneer, is that correct, in using DNA in a court setting? Yes.

×

And so, again, this would be, I think, the first case, I think is that fair to say, the first case where DNA was used -- and I think this was a sexual assault case -- this was to be used in a criminal Court for the first time? Now that may

1		simply refer to Britain but presumably, to your
2		knowledge, would that have been the first time
3		that DNA was used in court anywhere?
4	A	Yeah, I'm not I'm quickly trying to there is
5		a reference to, I'm not sure whether this article
6		refers to two cases. I think the very first case
7		that was published was a refugee application on an
8		issue of paternity.
9	Q	Okay.
10	A	And the next case was a criminal case involving
11		the sexual assault and murder of two little girls.
12	Q	Yeah. There is if you look at the, where I've
13		drawn out:
14		"The genetic test was developed by Dr.
15		Alec Jeffries already been used in
16		an immigration case"
17	A	Ah yes. Okay. The then this case refers to
18		the murder of two girls. I think the accused was
19		a man called Pitchfork, an unusual name, but it
20		actually, it's been written up I think by Joseph
21		Wambaugh in a book called The Blooding, and it's a
22		very, very famous case because it truly was the
23		first case where mass testing of a male population
24		in one village in England was carried out, and
l l	İ	

then ultimately that resulted in the

1		identification of the assailant.
2	Q	And would that have been in and around 1987 then?
3	А	Yes, it was.
4	Q	All right. So if we could go back to the
5		affidavit, 001587, just at the bottom it says:
6		" I am informed and do verily believe
7		that Dr. James Ferris, of Vancouver,
8		B.C. (See Exhibit "B" attached) is an
9		acknowledged expert in DNA genetic
10		typing in Canada, and that Dr. Ferris is
11		prepared to conduct such tests"
12		And, again, do you take issue with anything
13		stated in there about your expertise?
14	А	Well I think it's flattering. I think this, we
15		were clearly in at the beginning in terms of
16		pioneering the work, but I'm not sure that I would
17		have classified myself as an expert.
18		There were in fact, I would
19		think it would be fair to say there were no real
20		experts, certainly within the forensic context.
21		The RCMP were looking at the methods, they were
22		being very cautious as to what way they would go
23		with regard to developing the techniques, but they
24		were working hard with the FBI and the Home Office
25		in Britain to sort something out. We were

1		liaising in Vancouver with a number of other DNA
2		labs, there was one in Calgary, a private research
3		facility. We hosted a joint meeting with the RCMP
4		and some of these other people interested in
5		Vancouver to try and sort out some of the basic
6		problems but, you know, it became clear to me that
7		the future of the technology was such that it was
8		going to leave us a long way behind.
9	Q	If we could then go to page 001604, I think it's
10		still part of the affidavit, just to try and
11		identify for the record what this is the
12		listing of exhibits from the original trial. Is
13		this document familiar to you, would you have
14		circled these, or was that would someone else
15		have done that?
16	А	Umm, I I've seen that document before. I know
17		that I saw this document in connection with the
18		Fisher case,
19	Q	I see.
20	A	but I don't know what who circled those, it
21		may have been me, but I don't doesn't look like
22		my writing.
23	Q	And if we can just go to 277663.
24		And this is, Mr. Commissioner,
25		this is just a document that I have pulled that
	ı	

has the index of exhibits, and I just want to go through, if we could call that up.

I don't think there's any issue with any of this, but just so that we see, each of the exhibits at trial had a P number, and I'll show you the court order in a moment as to what you, at least what the court order says you received; P.5 is the coat, P.6 is the panties, P.7 is the girdle, P.8 is the slip, P.9 is the brassiere, P.10 is the uniform dress, and P.13 is the envelope containing two vials. If we could then go --

COMMISSIONER MacCALLUM: These were exhibits in which trial?

MR. HODSON: These were the exhibit numbers in the original trial, if you see at the top August 10, 1971, so this is the index.

And then, when we look at the court order, if we go to 255115 -- actually, we could put this document on the left-hand side and put 255155 on the right-hand side. Go to the next -- no, I'm sorry, on the right-hand side should be 255115, I think the doc. ID is 114 but go to page 115. So here is the court order of January 12th, 1988 that orders these exhibits

1		entered at the trial:
2		" be released to the care and custody
3		of Dr. James Ferris".
4		So if we take a look here we can just call
5		that out it actually looks as though you did
6		not get the coat, but is that right, P.5, do
7		you remember getting a black coat?
8	A	I don't remember the coat, and I actually, I know
9		we did get the dress, but I don't have an image of
10		the dress in my mind, but yet all the other doc
11		all the other garments I can clearly visualize.
12	Q	Okay.
13	A	And that is really confirms in my own mind that
14		we did not do much in the way of an examination of
15		the dress.
16	Q	Okay. So P-5, the black coat, is not one of the
17		exhibits that you received. Do you remember, did
18		you ask did you ask or indicate what you wanted
19		to receive?
20	А	No. I had no idea what exhibits were available.
21	Q	Okay. So P-6, P-7, P-8, P-9, P-10 are the ones
22		that I outlined being the panties, the stockings,
23		the slip, the brassier and the dress; correct?
24	А	Correct, and it's the white uniform dress that I
25		don't have a visual memory of.

		, age 2000 i
1	Q	I think did you acknowledge that you received
2		it?
3	A	Oh, yes, I'm sure we received it, but, you know, I
4		examined all of the smaller articles very
5		carefully, but for some reason I just don't have
6		in my mind an image of that white uniform dress.
7	Q	Okay. Then we go down to P.14 which is the sample
8		of pubic hair from the body of Gail Miller. Do
9		you recall whether anything was done with that?
10	A	No. I mean, I would not have examined that.
11	Q	Okay. If we can go to the next page of the
12		left-hand document, please, or down to P.24.
13		P.24, P.25, if we can just zoom in there, P.24 is
14		the envelope containing, a further envelope
15		containing two vials and I think those were the
16		two vials, the frozen semen, I think you told us
17		that were empty or appeared to be empty; is that
18		right?
19	A	Yes.
20	Q	P.25 would have been the head hair from David
21		Milgaard. Would you have done anything with that?
22	A	No, we would not have examined that.
23	Q	And then if we can scroll down to 35, the toque in
24		a brown envelope, and I think the evidence at the
25		original trial was that that may have had some
		Movey CompuCourt Poporting

		. ago 2000
1		blood on there. Do you remember doing anything
2		with the toque?
3	А	No, I did not examine the toque.
4	Q	And down, P.41, the blood sample identified as
5		that of Ronald Dale Wilson, did you do anything
6		with that?
7	А	No, we didn't.
8	Q	Okay. If we can then just go back, we'll have the
9		court order up, please, on the right-hand side.
10		Sorry, just the court order. If we can go to the
11		next page, and they talk about the exhibits being
12		mailed to you; correct?
13	А	Yes.
14	Q	And then if we can scroll down to (c), it says:
15		"The exhibits are to be returned in any
16		event within one month by Dr. Ferris by
17		registered mail."
18		And I think we'll see some documents later that
19		it was quite some time later that they went back.
20		Do you recall that?
21	А	Yes. I think it was almost a year.
22	Q	Yeah. And what do you recall how that came
23		about or why they were not returned within 30
24		days?
25	А	First of all, it took us almost 30 days to get set \P

1		up to start the experiments and then they were,
2		after we had finished with them, we locked them
3		back in the filing cabinet and I suspect the
4		reason that they were not sent back was simply my
5		negligence, I did not send them back when I should
6		have, but they remained locked in that cabinet and
7		I think the next request, I received a request, I
8		can't remember whether it was from Mr. Wolch or it
9		was from Saskatoon asking me to return them. They
10		were then returned immediately.
11	Q	Yeah, and I'll show you a letter a bit later, I
12		think there was a letter back, and it appears to
13		just have been inadvertence that they were not
14		returned; is that fair?
15	А	That's correct, yes.
16	Q	And then when you were asked, you returned them?
17	А	Correct.
18	Q	And where were they kept in your lab then?
19	А	They were in a vertical filing cabinet. As you
20		came in through the door we had a series of
21		lockable filing cabinets where we kept the, any
22		dried clothing exhibits and each individual drawer
23		was lockable and these were kept in that locked
24		drawer and the samples themselves were sealed.
25	Q	Okay. And then down to paragraph (d), it says:
	II .	

1		"Dr. Ferris is to retain the exhibits
2		during the period required for
3		scientific testing within his sole
4		possession and is, insofar as is
5		possible to preserve the exhibits in
6		their original state."
7		And I think we have heard that part of your
8		testing was to remove part of the panties to do
9		the test?
10	А	Yes.
11	Q	And is it fair to say that that was necessary for
12		you to do the work that you had to do?
13	A	That's correct.
14	Q	Again just for the record, a couple of documents,
15		155463, and this just confirms, January 18th, '88,
16		that the Correctional Services provided you with
17		Mr. Milgaard's blood sample; is that right?
18	А	Correct.
19	Q	And did you ever do any comparisons then in your
20		lab, did you ever use Mr. Milgaard's blood for any
21		purpose?
22	А	Well, we extracted DNA from that and we got a good
23		profile from that, but we obviously weren't able
24		to compare it with anything from the clothing.
25	Q	And then if we can go to, just try and keep this
		Meyer CompuCourt Reporting

1 in chronological order, I'm going to jump ahead to 2 a letter that contains some notes, 230988, and 3 I'll come back to this letter a bit later, it's 4 April 1, 1992 to Mr. Williams and you enclose 5 laboratory working documents and x-ray radiographs, represent the actual pages from our 6 working laboratory files and are not specifically organized as a Milgaard file and include other 8 9 cases, so I take it from this, I just want to 10 quickly go through these and see if you can just 11 help us understand what they are. Am I to take it 12 from this that you would have sent a copy of all 13 of your lab files and notes relating to the work 14 you did to Mr. Williams? 15 That's correct. At that stage the laboratory had Α 16 closed and we simply had file folders with 17 documents relating to all of the case work that we 18 had done and each case was separately identified 19 by number, but clearly at any particular point in 20 time the research technologist and my graduate 21 student could have been working on other research 22 projects, but we kept a detailed daily record of 23 everything that went on in the laboratory and in 24 order that I didn't miss anything for Mr. 25 Williams, we sent him the entire records.

1	Q	Okay. If we can just go to the next page, I don't
2		want to spend a whole lot of time on this, but
3		these would be notes from someone in your lab; is
4		that right?
5	А	Yes. I have, I think, probably got copies of the
6		entire document that I sent to Mr. Williams.
7	Q	Yeah, and I'll go through these, I've got the
8		document as well, you are certainly welcome to
9		follow the paper or on the screen, but whose notes
10		would these be?
11	A	These would have been written either by Kelly
12		McNeill, who was the research technologist, or
13		Lorie Chung who was my Ph.D. student. I can't
14		tell you which, whose the writing is.
15	Q	And so again here it looks as though you would
16		have put Exhibit B, letter exhibits to the stuff
17		that you were the items that you were testing?
18	А	Yes. Remember, they are actually doing the lab
19		work. All that would happen normally in this sort
20		of a case is I would go into the laboratory at
21		some stage during the day and we would go over
22		what they had done and perhaps review the lab book
23		for the previous day's work, so a lot of the
24		writing and notes here don't really mean much to
25		${\tt me.}$
	ii	

1	Q	Okay. Let's go to the next I mean, I think
2		what they talk about, it's self-explanatory, about
3		cutting out the spot on the panties, etcetera?
4	А	Yes.
5	Q	If we can go to the next page. Are you able to
6		tell us what any of this relates to?
7	A	This will relate to the actual laboratory methods
8		they are using, the type of chemicals they are
9		using, the time that each individual step is done.
10		For example, you can see the reference there a
11		third of the way down the page to the spinning of
12		the sample and then the ending of a particular
13		step of the analysis, then the amount of different
14		chemical constituents that are used, that's all
15		documented. I'm not actually sure that in a
16		forensic science laboratory they would detail all
17		of these documents because their protocols would
18		have these details, but they will simply follow
19		step 1, step 2 without necessarily giving the
20		detail, but in a research lab where you need to be
21		able to go back and check and see if you've
22		altered your method at all between one day and
23		another, you have to keep a detailed record of
24		every drop that you put in a particular sample so
25		that you can reproduce it.

		——————————————————————————————————————
1	Q	So would this relate to the process of extracting
2		substances from the garments and trying to extract
3		the DNA; is that
4	А	That's correct.
5	Q	And the next page?
6	A	That's a photograph of one of the x-ray profiles.
7	Q	Sorry I don't have a better copy. If you can
8		just go and so again, this would have been the
9		x-ray plate that would have shown the blurring?
10	А	Yeah, that's right, and in fact you can see on the
11		left-hand side of the image a nice clear, distinct
12		band and that would have been our control sample.
13	Q	Is that where I've circled it?
14	А	Yes, that's correct.
15	Q	Go to the next page. I think this is another
16		matter.
17	А	This is a different case.
18	Q	And keep going, next page, next page, page 994,
19		and again this would be another photograph of the
20		x-ray graph?
21	A	That's right, and if you look across the top, in
22		the gelatin plate that you put the samples, and
23		you may have seen on television samples being
24		dropped into little grooves on a gelatin plate,
25		except nowadays they do it with a whole row of
	ñ	

1		pipettes and they press one button and deliver an
2		exact sample. We were individually putting drops
3		into each of these little troughs in the gel and
4		you can see here that after this would be
5		after, it looks as if it's about 23 22 hours of
6		electrophoresis, that even after that time there
7		isn't an identifiable separation of the samples.
8	Q	And so would this be the correct date then,
9		February 9th, February 10th of 1988 that
10	А	Yes. It looks as if the sample, the
11		electrophoresis started at 12:50 p.m., that would
12		be at lunchtime on February the 9th at the top of
13		the page, and ended at nine a.m. on February the
14		10th.
15	Q	Okay.
16	А	And then it would be plated out and the x-ray,
17		development of this, that black picture, that
18		would not have been created for probably another
19		two or three days, but it would then have been
20		referred back to that sample and clipped to that
21		page.
22	Q	And would this then tell you then two days, three
23		days after February 10th that you could not get a
24		DNA extraction?
25	A	That's essentially there's nothing there.

		——————————————————————————————————————
1	Q	Okay.
2		COMMISSIONER MacCALLUM: Your phrase was no
3		identifiable separation was it?
4	А	That's the way I would interpret that image now,
5		but without having the actual plate in front of
6		me, I'm not sure how far I could go, but it
7		clearly, even then, it would not have been
8		interpretable.
9		BY MR. HODSON:
10	Q	We can then go to 996, skip ahead two pages, and
11		this is a report March 7th, '88. Can you tell us
12		what this is? It's got at the top Restriction
13		Digest Information.
14	А	This is simply an account of the different
15		solutions and the quantities of the buffer and
16		other chemicals that we used in each of the tubes
17		that were then plated out on the erectophoretic
18		plate.
19	Q	And then if we can go to the next page, it looks
20		as though March 10th, doing a bit further work on
21		the Milgaard case as it says at the top; is that
22		right?
23	А	Yes.
24	Q	Are you able to tell us what that was?
25	A	The x-rays were not developed very well. I have a
		3

1		feeling this was one of our controls actually with
2		the control person being, I suspect one of our
3		technologists from somewhere in the lab,
4		downstairs, that we would have gone and taken
5		blood from to provide us with controls, probably
6		called Thomas Heidt. If you look at the
7		right-hand image, the one marked March 14th
8	Q	Yes.
9	A	and if you look at, there's a long vertical
10		streak, and if you look slightly to the left of
11		that, or sorry, to the right of that, you can see
12		actually three faint horizontal bands. I don't
13		know that I can point them out.
14	Q	I might find you a better if we can call up
15		068982?
16	А	Yes, here you can see the type of banding on the
17		left-hand side, these are the bands that you would
18		hope to get, and the big vertical smear, which
19		almost looks like a comet tail, is what we were
20		getting, the best that we were getting from David.
21	Q	So the left-hand side would be the control sample?
22	A	Yes.
23	Q	So that would be likely Mr. Milgaard's profile?
24	Α	I'm not even sure whether this is his case.
25	Q	There's a reference there to the

		_
1	A	Oh, yes, it is. Yes, it is.
2	Q	So then on the right-hand side, this would be
3	А	That might well have been a sample from Gail
4		Miller.
5	Q	And so that would be typical then of the results
6		you were getting at the time?
7	А	That's correct, and as you can see, if you want to
8		compare those horizontal bands, there's nothing to
9		compare them with. Looking at these today in
10		2006, it's almost embarrassing because, you know,
11		I mean, this is, by today's standard, very amateur
12		work.
13	Q	If we can go to 164573, it's a letter from Mr.
14		Wolch to Legal Aid, but it talks about:
15		"Preliminary reports by telephone from
16		Dr. Ferris are very favourable."
17		Would you have been reporting on your work then
18		as you go along by phone to either Mr. Wolch or
19		Mrs. Milgaard or Mr. Asper?
20	А	I think I was dealing entirely with Mrs. Milgaard
21		on the phone. I don't I may have spoken to Mr.
22		Asper on a number of occasions. I think probably
23		what we had said was that we think we found DNA,
24		but that so far we haven't been able to identify
25		it.

		ŭ
1	Q	Okay.
2	A	And that would be I mean, we had not been able
3		to do any more than that. If I communicated more
4		than that, I was wrong, and I hope I didn't.
5	Q	And so again, the notes that I went through around
6		this time anyway that the work was there, once you
7		found, I think you said what you think was DNA and
8		the smear, at what point did you make the decision
9		to stop the work on the DNA?
10	A	I cannot remember the date, but I know that we
11		tried a number of different methods of cutting the
12		DNA chemically, plating it out using different
13		types of electrophoresis, different types of
14		labelling, but I think that probably we finished
15		after about three months and decided that this
16		really was going nowhere.
17	Q	And how I'm sorry?
18	A	I think actually even after I told Mrs. Milgaard
19		that we had gone as far as we could, I think in
20		fact we tried again as our own methods became a
21		bit more refined, but we still got nothing.
22	Q	I see. And did you prepare a written report on
23		the DNA work?
24	A	I don't think so, I think I simply phoned and said
25		we really have failed. I may have sent a letter,
		1

1		I don't recall it, but I did not do what I would
2		call a proper forensic report.
3	Q	And why not?
4	A	Mainly because at that stage my association with
5		the case had moved into another phase.
6	Q	And what phase was that?
7	A	Well, having failed to obtain any answer from the
8		DNA, I suggested to Mrs. Milgaard, because I
9		wasn't sure that anyone would be able to get a
10		decent DNA result, that maybe the best thing to do
11		would be to go back to the original forensic trial
12		evidence and I would be prepared to review that,
13		and certainly I would have been much more
14		comfortable at that stage doing that because that
15		was the sort of thing I was doing on a day-to-day
16		basis, and I would have said I would be very happy
17		to look at the forensic science evidence and see
18		if by any chance there was anything in that
19		evidence that might offer an opportunity to look
20		again at the case.
21	Q	And so would this have been around the time then
22		that you communicated the results on the DNA
23		testing?
24	A	Yes.
25		COMMISSIONER MacCALLUM: Can I see the full

1		page there again, please?
2		MR. HODSON: I'm sorry?
3		COMMISSIONER MacCALLUM: Just the full
4		page, that's all. It's March 7, '88.
5		BY MR. HODSON:
6	Q	So you then switched gears from DNA to, I think
7		what you said is work that you regularly did; is
8		that right, the forensic pathology?
9	А	Well, yes, essentially reviewing evidence and
10		reviewing statements and forensic science reports.
11	Q	Were you more comfortable doing that than you were
12		the work on the DNA?
13	A	Well, the work on the DNA was research, it was
14		very sophisticated, it was dealing with laboratory
15		methods that I was learning on a day-to-day basis.
16		I mean, I was certainly not familiar with this,
17		this was all new to me. As far as reading
18		forensic science reports, reading transcripts is
19		something I had been doing for pretty well all of
20		my forensic working life.
21	Q	And so just on that point, would this be similar
22		to what you might do, for example, if an accused
23		in a criminal case came to you or their counsel
24		came to you and said look at the Crown's evidence,
25		review it and give us an opinion as to what might
		1

1		assist us in the defence of the matter, is that a
2		fair
3	A	Exactly, and, I mean, I still do that, I do that
4		on a regular basis.
5	Q	And would that have been your specialty at the
6		time?
7	A	Well, I suppose as a practicing forensic
8		pathologist, it is a part of being that.
9	Q	And so that's was that your suggestion then to
10		Mrs. Milgaard, let me take a look at things and
11		see if I can come up with anything that might
12		help?
13	А	Yes.
14	Q	Then if we can go to 002486, this is your report
15		of September 13, 1988 to Mr. Wolch, and I believe
16		this is your next written report. I showed you
17		the one letter in 1987, I think this is your next
18		report, and if I could just well, maybe go to
19		page 002492 and deal with the DNA first. There's
20		a reference here:
21		"As you know, several months ago we had
22		an opportunity to examine the clothing
23		and to attempt to retrieve DNA from
24		samples of clothing including the
25		panties and panty girdle of the victim.

1		As I communicated with you by telephone,
2		all of these attempts to obtain
3		sufficient DNA to carry out a genetic
4		typing analysis were unsatisfactory. At
5		no time did we obtain sufficient
6		quantities of DNA to allow us to do a
7		detailed typing. The extent of the
8		breakdown of the samples was such that
9		it would be my opinion that the type of
10		DNA synthesis which is becoming
11		available and allows for the artificial
12		manufacture of sufficient quantities of
13		DNA from tiny traces recovered at the
14		scene would probably not be appropriate
15		in this case. Also there is no evidence
16		that the DNA would have remained
17		unaltered during its period of storage
18		following its examination in 1969."
19		And again, would that be I believe this is the
20		only written report at the time; is that correct,
21		about the DNA work?
22	A	Yes, that's correct, and it just shows how wrong
23		you can be.
24	Q	In what respect?
25	A	Well, I was saying effectively that I didn't think
	ĺ	

1 PCR would help and that was because we believed 2 that the amplification methods that PCR involved 3 would simply, would magnify the degradation process, that in fact all that would happen is 4 5 that you would end up with very large amounts of degraded DNA which would again not be 6 identifiable, and of course we were completely 8 wrong because the very opposite is the case. 9 And you talk here about: 10 "... that the type of DNA synthesis which is becoming available and allows 11 12 for the artificial manufacture of 13 sufficient quantities of DNA from tiny traces ..." 14 15 Are you referring there to the PCR? 16 Yes. Α 17 So at this time, September 13th, 1988, was PCR 0 then at least in existence in the scientific 18 19 community? 20 It was in existence in the scientific community, 21 it was present in its early phases, and I don't 22 think it had been adopted in the forensic 23 community, although they, people who were, like 24 the RCMP and the FBI and the home office, were 25 clearly very interested. This was technology

1		which was being advanced by people like Sir Alex
2		Jeffries in Lester.
3	Q	And so again at this time it was your view that
4		that technique that was being developed wouldn't
5		work?
6	A	Well, that was
7	Q	Sorry, wouldn't be appropriate?
8	A	Well, I didn't think it would be appropriate. In
9		fact, the reason I knew about this technique was
10		that I had actually attended a conference with
11		Alex Jeffries in Madras in India and we had a long
12		talk about, you know, where DNA was going, and it
13		didn't take me long to realize that he was moving
14		into an area which was going to be well beyond my
15		abilities to cope with in our small facility in
16		Vancouver.
17	Q	Did you have any discussions with anybody, Joyce
18		Milgaard, David Asper, Hersh Wolch, around this
19		time about other resources that might assist on
20		the DNA front, do you recall anything about that?
21	A	I don't recall anything about that.
22	Q	And your comment here, you say:
23		"Also there is no evidence that the DNA
24		would have remained unaltered during its
25		period of storage following its
	ĬI.	

1 examination in 1969." 2 What was your concern there, what did you mean by 3 that? 4 Α Well, what I was saying is that our research on 5 degradation indicated that in an equivalent period of time samples did degrade and I didn't think 6 that it was likely that there would ever be sufficient identifiable, undegraded DNA that would 8 9 help solve this case. 10 0 Okay. If we can go back to page 1, it would look 11 like you were sent various information by Mr. 12 Wolch or his office; is that correct, for you to 13 look at? 14 Α Yes. 15 And then in your opinion you recite, and we won't 0 16 go through it all, it's self-explanatory, but 17 certainly many of the key lab reports, a list of 18 exhibits -- if we can go to the next page --19 evidence from the preliminary hearing from many of 20 the RCMP lab technicians, we see Bruce Paynter. 21 Go down to the transcript of the evidence at 22 trial, it looks again to be the evidence of many 23 of the ident officers, you were also given the 24 evidence of some of the police officers who were 25 involved, again Bruce Paynter, Dr. Emson, and it

1		doesn't look like a complete transcript of the
2		evidence, but a significant part of it; is that
3		correct?
4	A	Yes. I can't remember what my communications with
5		Mr. Wolch or Mr. Asper were at that stage, but I
6		know that I was really only interested in looking
7		at any evidence that had to do with the recovery
8		of the body, the examination of the body and the
9		retrieval of the samples and the examination of
10		the samples. I was not interested in general
11		witness statements about the circumstances, and in
12		fact I never saw those.
13	Q	Now, it's my understanding that you did not get a
14		copy of either Mr. Caldwell's or Mr. Tallis'
15		closing address to the jury; is that correct?
16	A	That's correct.
17	Q	And so when this opinion was prepared, is it fair
18		to say you didn't know what the Crown and defence
19		counsel said to the jury in their closing
20		addresses?
21	Α	Correct.
22	Q	And I provided you with copies of that, or the
23		excerpts of that a couple of weeks ago; is that
24		correct? You've had a chance to look at that?
25	А	Yes, I have.
	ii	

1		COMMISSIONER MacCALLUM: How about the
2		charge of the judge?
3		BY MR. HODSON:
4	Q	Yeah, the charge to the jury, was that something
5		you had?
6	А	No, I did not. I've seen extracts of that.
7	Q	Then if we go, you state here:
8		"However, the above material examined by
9		me relates principally to the forensic
10		evidence and I think it is appropriate
11		that I should confine my comments to
12		that evidence. There are a number of
13		different topics which merit
14		comment"
15		Before I go through this, what was your objective
16		when you went through this material, what were
17		you looking for and what were you hoping to
18		achieve?
19	А	I think I was approaching it as a potential
20		defence expert. I reviewed all of the evidence to
21		see whether or not there was anything in the
22		evidence that might assist with the defence of
		David Milgaard as if I had been a potential
23		
23 24		defence witness at the original trial.

1		(a), claiming his innocence, and (b), had made an
2		application to the Federal Minister of Justice to
3		have his conviction reviewed; were you aware of
4		that at that time?
5	A	Yes, I was aware of that, and remember I was also
6		aware that Mrs. Milgaard and presumably David had
7		great faith in this new DNA technology, and
8		probably maybe even exaggerated faith in the DNA
9		technology, and the fact that David was willing to
10		provide a blood sample for comparison purposes was
11		perhaps an incentive for me to go through the
12		material in very great care to see if there was
13		anything I could do to help.
14	Q	And so you, then, would be looking for anything
15		that might assist Mr. Milgaard in his case,
16		seeking to have his conviction set aside, is that
17		correct?
18	A	Yes.
19	Q	And I think you said your approach would have been
20		similar or the same as if you had been retained,
21		back at the time of trial, to look at the case
22		against him; is that fair?
23	A	Yes.
24	Q	And I suppose the one difference might be that in
25		1988 you are looking at all the evidence that went

		Page 23417
1		in, whereas if you had been retained at the time
2		
2		of trial would it be fair to say that you would
3		not have the benefit of the same material, maybe
4		similar but not the same material?
5	А	Well, I might even have been available even to sit
6		in and listen to some of that evidence. But yes,
7		I mean, usually during the process of trial, as an
8		expert for one side or the other, you don't hear
9		all of the evidence.
10	Q	Now, prior to preparing this opinion, did you
11		speak to any of the witnesses directly?
12	A	No. That's, well, that's not quite correct.
13		I came to Canada in 1975 from
14		Britain, and I think it was in 19 it was either
15		the end of 1975 or early in 1976 I attended a
16		Canadian Society of Forensic Sciences conference
17		in Toronto, at which time I met Dr. Emson, and he
18		presented this case at that meeting. Now I don't
19		recall what he said about the case, actually, I
20		just remember his him discussing the case. And
21		I met him at that time, and in fact I had
22		communicated with him as another forensic
23		pathologist in Canada on several occasions, but to

the best of my knowledge we never actually

discussed this case.

24

25

1	Q	So in preparing this opinion, then, is it your
2		evidence, sir, that you would not have discussed
3		matters with Dr. Emson?
4	A	Correct.
5	Q	And what about, for example, Bruce Paynter or any
6		of the other lab people; did you talk to any of
7		them?
8	A	No. I don't know Mr. Paynter and I have still not
9		met him.
10	Q	If we can go to the next page, I just want you to
11		comment on a couple areas where I think you took
12		issue with what some of the witnesses of the day
13		had said, you say here:
14		"It would be my opinion that the stab
15		wounds as described by Dr. Emson were
16		neither immediately fatal nor even
17		immobilizing. In my experience
18		individuals with this type of injury may
19		live for several minutes following the
20		injuries. It is possible that in fact
21		she could have survived for at least 15
22		minutes following the injuries."
23		If I can just pause there, I think Dr. Emson's
24		evidence at the trial, and indeed before this
25		Commission of Inquiry, is that the fatal wound

1		was a stab to the lung, and that caused bleeding
2		into the lung, and that the death would have
3		happened, and I can't recall whether he said how
4		many minutes, but I think the essence was that it
5		would be fairly quickly; and do you take issue
6		with that then?
7	А	It depends, really, on I mean I'm not going to
8		argue with him over a matter of minutes, but this
9		is not a death that would be as quick as perhaps a
10		stab wound to the heart or a stab wound to one of
11		the great vessels, and in essence I think the
12		significance of this is that where her body was
13		found is not necessarily where the stabbing took
14		place. She could have been capable of movement
15		following this stab wound and I don't know, even
16		to this day, whether that was factored into the
17		examination of the scene.
18	Q	Okay. So your view and that would be based on
19		what, the autopsy report?
20	А	Based on the autopsy report, plus my own
21		experience of hundreds of cases of stab wounds to
22		the chest.
23	Q	And so your evidence is that she could have been
24		stabbed elsewhere and either on her own, certainly
25		on her own, walked to where her body was
		Meyer CompuCourt Reporting
	_	Certified Professional Court Reporters serving P.A. Regina & Saskatoon since 1980

1		ultimately found?
2	A	Or staggered a few yards. All I can say is that
3		where she ultimately, where her body was
4		ultimately found is not necessarily exactly where
5		she received her fatal stab wounds, it may be, but
6		it is possible that she could have moved some
7		yards, it's possible that in fact the stabbing
8		could have taken place somewhere else and she got
9		there for other reasons, I don't know. But I
10		don't know whether this timing, that clearly the
11		assault and her death represent two separate
12		times, separated perhaps by minutes, and I don't
13		know whether that has been factored into this
14		reconstruction of the case.
15	Q	And so here you say for at least 15 minutes
16		following the injury she could have survived?
17	А	Yes.
18	Q	And that is your opinion today, still?
19	А	Yes. Although, again, it's the sort of opinion
20		that I would like to be able to discuss with Dr.
21		Emson, because he saw the body, he saw the nature
22		of the injuries, and he, you know, his opinion
23		actually may therefore be more valid than mine.
24	Q	And I think and, again, I won't do justice to
25		try to repeat his evidence but I think he, what
	l	

1		he said at the time and what he told us was that			
2		the bleeding would have been into the lung, and			
3		fairly rapid, and I think that formed his opinion			
4		that it would be fairly quickly; do you have any			
5		comment on that?			
6	А	Well, even if it would take even if she died			
7		within two or three minutes, since she does not			
8		have any injury to her brain and her loss of			
9		consciousness will be as a result of blood loss,			
10		she clearly is going to be cognitive and capable			
11		of movement for even within Dr. Emson's short			
12		time of, I don't know, perhaps two or three			
13		minutes she is still capable of moving.			
14	Q	And so you are saying it could have been 15			
15		minutes?			
16	A	Yes. And that's based on my observations. But,			
17		again, the best evidence for this type of			
18		interpretation needs to come from the pathologist			
19		who performed the autopsy, but he needs to be			
20		specifically questioned about this, you know, he			
21		needs to be asked, you know, "what is the longest			
22		period of time she might have survived", and I			
23		don't know the answer to that, and I have not			
24		heard Dr. Emson's answer to that.			
25	Q	Okay. If we could just go down to the next			

1		paragraph, you say:			
2		"If this is the case",			
3		and I take it you are referring to being alive			
4		for at least 15 minutes after?			
5	А	Yes.			
6	Q	" and if as we know from the			
7		examination of the clothing she was			
8		wearing her coat at the time that the			
9		injuries were inflicted, then it is			
10		highly likely that she was alive at the			
11		time of the apparent rape."			
12		And can you just explain how you arrive at that			
13		conclusion?			
14	А	Well in order to, I suppose, be subject to any			
15		form of violent rape the clothing has to be at			
16		least partially removed.			
17	Q	Yes.			
18	A	And yet my interpretation of the evidence that I			
19		read was that her clothing, although a bit			
20		confused in its distribution on her body, it			
21		didn't look as if her panties and so on had been			
22		removed from her body, or at least they were			
23		present on her body.			
24	Q	Right. I think the evidence is that the panties			
25		were around her ankles, she was wearing her coat,			
	1				

1 her nurse's uniform was pulled down to her waist, and her arm was out of the arm holes of the dress 2 3 but not the coat. 4 If we can just carry on, you 5 say: "This would tend to indicate that her 6 inner clothing had been removed before the injuries were inflicted." 8 9 And I take it that would be based on the fact 10 that the -- well, you say here: "While this would explain the apparent 11 12 absence of knife wounds to the nurse's 13 dress, it also suggests that the 14 circumstances of the rape/murder were complex, probably prolonged, and in my 15 16 opinion, incapable of having occurred 17 within the time frame suggested by the evidence at the trial." 18 19 Can you tell us what you meant by and how you 20 arrived at the conclusion it was probably 21 prolonged and how it would have been incapable of 22 having occurred within the time frame suggested by the evidence at trial? 23 24 Well we have evidence of, if you like, partial 25 disrobing and perhaps re-organization of clothing,

1		we have evidence of multiple stab wounds, and we			
2		have evidence of sexual assault, we have evidence			
3		that she didn't die immediately, albeit maybe a			
4		few minutes, and I don't remember exactly what the			
5		time frame was but I believe it was about 15 or 20			
6		minutes, it was			
7	Q	I think I can try and tell you what evidence we've			
8		heard. I think the judge's charge to the jury			
9		suggested 6:45 to 7:10 a.m. as the window, I stand			
10		to be corrected on that; I think some of the			
11		evidence I think the evidence, in fairness,			
12		varied a bit as to the window of opportunity, but			
13		I think the charge to the jury put it in that time			
14		frame.			
15	А	Yes.			
16	Q	So, again, when you say it was:			
17		" incapable of having occurred within			
18		the time frame",			
19		when you gave this opinion what was on what			
20		did you think the time frame was?			
21	A	I my recollection was that it was about 15 to			
22		20 minutes.			
23	Q	And, in fairness, I should also tell you that I			
24		think the evidence at trial from Ron Wilson as far			
25		as how long Mr. Milgaard was away from the			
		4)			

1		vehicle, although that varied a little bit, would		
2		be in the range of 15 minutes, perhaps 10 to 15		
3		minutes would have been his evidence as to when		
4		Mr. Milgaard left and when he came back. So would		
5		that have been the time frame, then, you were		
6		thinking of when you gave this opinion?		
7	А	Yes.		
8	Q	And so it was your opinion that that was not, that		
9		based on what you saw with the body and the		
10		autopsy report, that the attack would have taken		
11		longer than that?		
12	A	Umm, yes. Although, in looking at this opinion, I		
13		wonder if I was expressing my doubt a bit		
14		strongly, but I think the reality is that I'm		
15		saying that there are issues relating to the		
16		timing of this event which need to be looked at.		
17	Q	Okay. And would you have been aware that that was		
18		one of the issues raised at the time of trial,		
19		certainly in the examination of some of the		
20		witnesses and in closing remarks to the jury?		
21	A	I don't think I had that evidence.		
22	Q	If we can then scroll down. Just at the bottom,		
23		we have heard some evidence of this, and you say:		
24		"Unless there was clear proven evidence		
25		of frank blood in the vagina, I would		

1		not consider the presence of apparent			
2		bloodstain secretions in the vaginal			
3		cavity of any significance."			
4		And I take it that was your opinion at the time?			
5	A	Yes.			
6	Q	Go to the next page. Seminal stains at the scene,			
7		you say:			
8		"I have real concerns as to the			
9		integrity and continuity of the samples			
10		of alleged semen that were recovered on			
11		February 4th at the scene."			
12		And, presumably, this is the frozen semen that			
13		was found at the scene and then subsequently			
14		analysed; is that what you are referring to?			
15	А	Correct.			
16	Q	What concerns did you have about the integrity and			
17		continuity?			
18	А	Well, any sample that is retained from a crime			
19		scene has to be specifically related to the crime			
20		scene in a number of ways, there has to be some			
21		forensic link with the scene, and there must not			
22		be the potential for significant contamination or			
23		disruption of that sample before it is retrieved			
24		and secured.			
25		Now my understanding, at the			

1		time that I wrote this letter, was that this
2		sample had not been retrieved for at least two
3		days after the body had been found. I saw some
4		photographs of the scene and it clearly showed
5		quite heavy distribution of blood in the snow,
6		much of the scene was heavily tramped, and I
7		believe, at one stage, that efforts were made to
8		melt the snow and look under the snow for
9		potential weapons, and it was only after all of
10		this had been done that the semen sample was
11		identified.
12	Q	Was it your opinion at the time, then, that that
13		sample would have no probative value?
14	А	Umm, it would be, in my opinion at the time and in
15		my opinion today that it would simply not be
16		acceptable as a valid, uncontaminated sample.
17	Q	And would it be fair to say or what you are
18		saying is it would not be reliable?
19	A	Correct.
20	Q	Okay. That's probably an appropriate spot to
21		break.
22		(Adjourned at 10:29 a.m.)
23		(Reconvened at 10:50 a.m.)
24	ВУ	MR. HODSON:
25	Q	We'll go back to page 002489. Okay. And I think,
	1	

when we left off, you told us that it was your opinion that the samples of semen, the frozen semen or alleged semen at the scene, you said, were of no probative value, and you talked a bit about your observations of I think you told us, one, the fact that it was at least two days later, and I think it actually may have been four, three or four days later; the trampling of -- in the area -- if we can just go down I think you elaborate on that in this letter -- you talk here about reading the statements and of being trampled extensively, movements by the victim, a large number of people attended the scene, it was: "... clear that there was considerable blood and bloodstaining of the snow around ... the body. ... evidence that the snow was shovelled to one side ... ",

and you say:

1

2

3

4

5

6

9

10

11

12

13

14

15

16

17

18

19

20

21

22

23

24

25

"In view of the porosity of snow particularly deeply frozen snow, mixing of evidence and soiling with blood from the area around the body would be almost bound to happen. There is also evidence that the area was melted during the searching process ...",

1		and then y	you say:	
2		1	"In view of the extensive disturbance of	
3		t	the scene and the obvious potential for	
4		C	contamination of the scene, I find it	
5		Ç	quite remarkable that two small pools of	
6		£	semen were identified four days after	
7		t	the initial examination."	
8		And then y	you say:	
9		1	On the basis of the forensic testing	
10		t	that was done I have no doubt that semen	
11		V	was recovered as described."	
12	And, what, can you tell us what caused you to say			
13		that? Wha	at	
14	A	Well I, si	imply, I would accept that if the	
15		forensic s	science service in the RCMP say "this is	
16		a seminal	sample", I would not argue, I mean they	
17		are expert	s in that and it's not for me to contest	
18		that sort	of evidence.	
19	Q	And then y	you say:	
20		ı	"I am surprised that with this clear	
21		i	inability to prove either the continuity	
22		C	or integrity of these seminal samples,	
23		t	they were considered admissible	
24		6	evidence."	
25		And is thi	is what you told us before the break,	
	I			

1		then, that your view was that these should not
2		have had any probative value?
3	A	Yes. I mean that's, again, that's not a decision
4		for me to make, but it certainly I mean this
5		would be in the mind of any forensic scientist or
6		forensic pathologist who is asked to present
7		evidence related to a sample where the integrity
8		of the sample not only can't be proved but, in
9		fact, can be proved to be unreliable.
10	Q	And so "unreliable" because, I think as you told
11		us, the three or four days later, the trampling in
12		the area, contamination, things of that nature?
13	А	Yes. I mean now, in retrospect, we know that
14		there are opinions that have been expressed that
15		this may have been dog urine, it may have been
16		contaminated with the victim's blood, and there
17		are various other things that might have happened
18		to this sample prior to its analysis.
19	Q	So just so we can go back, I think in 1988 you
20		expressed the opinion that it was of no probative
21		value, and would it be fair to say that if I had
22		asked you that question in 1969 or 1970 you would
23		have given me the same answer then?
24	А	Yes. I mean, to me, this it was a sort of a
25		fundamental that was hammered into me in my
	ii	·

1		training, that issues relating to continuity and
2		integrity of samples, I mean relating even to the
3		human body, is an issue, and everything that you
4		interpret has to be qualified by how reliable is
5		the sample that you are looking at.
6	Q	And so just if I can put it this way; from it's
7		not a question of science, forensic science being
8		different in 1969 than 1988 or even today, is that
9		correct, that
10	A	Yeah. I mean I really believe that issues
11		relating to the quality of forensic evidence were
12		really well-established as early as the 1940s, and
13		every laboratory was well aware of issues of
14		integrity of sample and continuity of sample, and
15		although our protocols may not have been as strict
16		then as they are today the principles were there.
17		I mean nowadays, because of the sensitivity of
18		some of the testing that is available such as DNA
19		testing, we have to go almost to extremes to
20		preserve the integrity of scenes far further than
21		we would ever have gone 20 years ago.
22	Q	But between 1969 and 1988 there was no advances in
23		science or changes in the forensic pathology
24		community relating to the integrity of samples; is
25		that fair?

1	A	I think that's correct.
2	Q	Yeah.
3	А	The observable differences would be that by 1988
4		when we would go to scenes we would be wearing
5		protective clothing, that was probably not done in
6		1969, but that was not done because we didn't
7		realize that we had the potential for
8		contaminating the scene.
9	Q	Right.
10	А	If we thought in 1969 that, by being there, we
11		would have contaminated the scene we'd have done
12		something about it.
13	Q	So then if we can go on to the next page, please,
14		you talk about this issue of blood, serology of
15		seminal stains. And we've heard a fair bit of
16		evidence about this, and I think the evidence at
17		trial was that the hemostix testing of the seminal
18		stain was done by Staff Sergeant Paynter of the
19		RCMP lab, showed evidence of apparent blood. You
20		say:
21		"There is no question that the Hemostix
22		is a reliable hospital test for the
23		presence of blood but it is not positive
24		proof of blood."
25		And then it goes on to say:

Α

"However, even assuming that the semen sample was stained with blood, I do not believe that the presence of this blood significantly alters the final conclusion as to the meaning of the serological test carried out on the seminal stains." Can you explain that for us, or just this whole

issue of the serology?

First of all, dealing with the hemostix test, it is a presumptive test for blood, and that is all, it is never claimed to be anything else.

What do you mean by "presumptive", maybe that's --If it is positive then we can presume that the sample contains blood. For example it's used for testing for the presence of blood in urine in a hospital urine sample. Now there isn't really much opportunity for the urine sample to contain anything else that would be positive or give a false positive other than blood, and that's where it is valuable. You don't write down that "there is blood in the urine" in a hospital, you say "the hemostix test is positive", and you then examine the sample under the microscope to see if you can

see blood cells, and you take it further.

1	Q	Right.
2	A	And the same applies within the forensic science
3		use of this. And this business of the positive
4		hemostix test misleading, giving misleading
5		results, I mean this is not unique to the Milgaard
6		case. I gave evidence in the Chamberlain case in
7		Australia where exactly the same thing had
8		happened. Hemostix was used to identify stains,
9		and there was a presumptive test for blood which
10		later turned out to be a false test, and so you
11		have to be careful how you do that. And
12	Q	And I'm sorry, go ahead?
13	Α	And as I recall, in the evidence in this case, at
14		the trial someone said that the hemostix test
15		actually meant that there were minute traces of
16		blood present. Well, that's not correct.
17	Q	I think what Staff Sergeant Paynter, certainly his
18		evidence before the Inquiry and I believe his
19		evidence at trial, was that it was presumptive, a
20		presumptive test for blood, but that it could have
21		resulted it could have been a false positive
22		if, I think, it was leather or leafy vegetables,
23		certain things could cause the sample could
24		contaminate the sample and cause a false positive
25		test for blood, and I think he ended up saying "I
		Meyer CompuCourt Reporting

1		can't say that it is blood".
2		Now there is other references in
3		the transcript or in the closing address that I
4		will refer to you later, I know, that you have
5		brought to my attention, but just on the evidence
6		of Staff Sergeant Paynter that the positive
7		hemostix testing doesn't necessarily mean it's
8		blood, you agree with that?
9	A	Oh, absolutely. That's what I would expect him to
10		say. I mean, again, this is this is not was
11		not new to forensic science in those days, people
12		were well aware that it was simply a screening
13		test.
14	Q	Correct.
15	A	It's, you go to the scene, and you use your
16		hemostix to try and identify samples that you will
17		then collect and carry out more sophisticated
18		tests on.
19	Q	Right. If we could just scroll down here, and
20		let's get to the issue of the secretor and the
21		antigen, you say:
22		"My understanding of the serology
23		evidence is that Gail Miller was Blood
24		Type O it does not matter whether or
25		not"

		, age 20.00
1		she was.
2		" a secretor.
3		It is also apparent that
4		serological testing of the semen
5		revealed the presence of Type A
6		antigens. I have also accepted as fact
7		that David Milgaard is Blood Type A,
8		non-secretor."
9		And let me just pause there. On what did you
10		base that assumption or that you accepted that as
11		fact?
12	A	Because that was my understanding of the evidence,
13		that he was in fact a type A non-secretor.
14	Q	Did you examine the test or consider the test that
15		was done at the time and how they did the test and
16		reach any conclusions or opinions in your mind
17		about whether or not the test that was done to
18		determine Mr. Milgaard's secretor status was a
19		proper test?
20	Α	I don't know what test they did. I believe they
21		tested saliva,
22	Q	Yes, they did.
23	А	and that was that contained, or presumably
24		contained no blood type, and they made a
25		conclusion that this was a non-secretor test.
	I	

		1 ago 25+01
1	Q	Did
2	A	Now there were other tests that they could have
3		done.
4	Q	Did you have any concerns, when you gave this
5		opinion, as to whether or not David Milgaard was
6		in fact a non-secretor?
7	А	Umm, no, because my purpose in this opinion was to
8		review the evidence that was presented at the
9		trial.
10	Q	And so when you say "I accept it as fact", would
11		that be based upon the evidence at trial?
12	А	Yes.
13	Q	And then, if we can carry on, I think just before
14		I go through this part, I think what we've heard
15		is that if the frozen semen came from the
16		perpetrator, the frozen semen had A antigens, and
17		if it was to be linked to David Milgaard, who was
18		a non-secretor, there would have to be some
19		explanation as to how A antigens could be in his
20		semen sample if he is a non-secretor. And then
21		certain witnesses looked at the possibility that
22		his blood could be in the semen, and that that
23		might explain where the A antigens came from, and
24		as well it ties back to this hemostix test about
25		the blood; is that fair?

		Page 23438 —————
1	А	That's correct.
2	Q	And so the issue, I think when we go through here,
3		is where you look at the evidence at trial that
4		if I can summarize it this way that tried to
5		explain how a non-secretor could have A antigens
6		in his semen; is that fair?
7	A	Yes.
8	Q	And then you carry on:
9		"Semen which is proven to contain Type A
10		antigens is most likely to have come
11		from an individual who is Blood Type A
12		and a secretor."
13		Now you say "is most likely" and you say:
14		"Clearly this would exclude David
15		Milgaard."
16		Can you explain that?
17	A	Well if it came from an individual who was a type
18		A secretor then the evidence states that, at that
19		time, David Milgaard was thought to be a type A
20		non-secretor and, by definition, that would
21		exclude David.
22	Q	Then you go on:
23		"Semen which contains Type A antigens
24		could have come from a secretor or
25		non-secretor and have been contaminated
		•

25

with antigens from Type A blood. Ιn this case it is alleged that the apparent bloodstaining of the seminal fluid recovered near the scene must have been contaminated by blood from David Milgaard. Not only is this idea unlikely, but it is not supported by any of the evidence. In order for David Milgaard to have contaminated his semen with his own blood, he would have had to have been suffering from some bleeding injury, either an injury to the penis or his urethra. This injury may be on the basis of a direct injury inflicted before or during the sexual assault or more likely would be as a result of an injury to the urethra caused by an internal infection. I have not found any evidence from the material that I examined that David Milgaard was suffering from any such bleeding injury. I have also spoken to a number of personal contacts in other forensic science laboratories and on the basis of their experience and my own experience,

we are not familiar with a single case
where seminal fluid or stains have been
found to be contaminated by blood from
the alleged assailant. It would be my
opinion therefore that even if the
contamination of the seminal sample can
be proven to be blood, there is no
evidence that this blood came from David
Milgaard and therefore there is no
evidence that this Type A semen can be
linked with David Milgaard."

And I think, just on the point about the injury
where you talk about your experience not being

And I think, just on the point about the injury where you talk about your experience not being familiar with that, at the trial Dr. Emson -- at the original trial Dr. Emson testified about -- and I can't recall his exact words -- but to the effect that it was not uncommon for young males to bleed into their semen. And I may have overstated it, but he certainly talked about that being a possibility, and I think here you are saying "lookit, that's fairly rare, I've never heard of it"; is that correct?

A Yes.

And I think Dr. Emson subsequently has more or less agreed with your opinion on that point, that

it's unlikely.

Α

Am I correct in summarizing what you are saying here is that there is no evidence at trial -- which was the case, there was no evidence at the trial that David Milgaard had bled into his semen -- that you are saying if the A antigens in the semen came from someone's blood -- and that's the only ex -- or one explanation -- there's nothing to say that it came from David Milgaard's blood?

A Correct.

ignored.

call it that, as a forensic issue; in other words, you are saying this is an evidentiary matter?

I think it's an evidentiary matter. In order to link this so-called blood-stained semen with David Milgaard, there were theories advanced as to how this link might occur, but none of those theories had any evidential foundation that was presented at the trial as far as I know and therefore, if there is no evidential foundation to support a hypothesis, my understanding is that really has to be taken out or ignored or else directed to be

And would that be as much a proof issue, if I can

Q So in other words, if the fact that there's no

evidence that David Milgaard bled into his semen and assuming he's a non-secretor, assuming the frozen semen came from the perpetrator of the crime, then on that evidence that should have excluded David Milgaard?

Yes.

A Yes

Q If we can go down to paragraph 3, you say:

"In my opinion there is clear evidence from the circumstances of the scene and also from the apparent contamination of the scene by the victim's blood that if this seminal sample was contaminated with blood, it was almost certainly contaminated with Type O blood from the Type O blood would not contain victim. antigens A and B and therefore a seminal stain or sample which is typed as containing A antigens and is contaminated with O blood from the victim would have originated from an assailant who was a Type A secretor. I believe that this is the most likely explanation for the serological findings in the seminal stains in this case. also note that this opinion completely

1		excludes David Milgaard as being the
2		source of the seminal fluid."
3		Is what you are saying there is lookit, if there
4		was blood in that frozen semen, it likely came
5		from Gail Miller?
6	A	Yes.
7	Q	And Gail Miller's blood in that semen would not
8		account for the A antigens which were found in the
9		semen?
10	A	Correct.
11	Q	And I don't dare go into type AB secretor issues
12		because I don't I'm not sure that that bears on
13		matters here.
14		You then also talk in this last
15		paragraph about the hair and fibre material
16		recovered from the nurse's badge and you say that:
17		"As presented in court I believe it
18		could even have been misleading to the
19		jury."
20		Can you tell us what you meant by that?
21	A	I actually can't remember the details of that. I
22		just remember being confused myself reading about
23		that evidence.
24	Q	Yeah. I think there was evidence that there was a
25		brown fibre found in the name tag pin of Gail
		Meyer CompuCourt Reporting

1		Miller's coat and I don't know that there was any,
2		I don't believe there's any evidence that linked
3		it to anything else. Do you recall anything else
4		about the fibre?
5	А	No, I don't remember that.
6	Q	You say at the bottom:
7		"The general circumstances of the scene
8		would tend to indicate to me that the
9		offence may have taken place elsewhere
10		and that the body had been dumped."
11		And can you elaborate on why you reached that
12		conclusion?
13	А	It's difficult now, after so many years, but my
14		recollection of the photographs is that the body
15		was lying at the side of a road on top of a
16		snowbank, presumably a bank of snow that had been
17		piled up there as a result of snow clearing.
18		There was a lot of blood around the body and it
19		would be an unusual place for somebody to die
20		following an assault, right beside a road with
21		heavy blood staining and some circumstantial
22		evidence to suggest that the body may have been
23		able to move.
24	Q	Okay.
25	A	And therefore it seemed to me that one of the
		-

considerations should be that the murder had taken place and that the body had been bumped, and then take into that the environmental factors such as the temperature, the arrangement of the clothing, it was all, to me, very confusing. It wasn't an area that I had gone into in detail, but if I had been the forensic pathologist at that scene, I would have questioned whether or not this was actually the primary scene or whether in fact it might be a secondary scene. Go to the next page, please, you say here:

"On the basis of the evidence that I have examined, I have no reasonable doubt that serological evidence presented at the trial failed to link David Milgaard with the offence and that in fact, could be reasonably considered to exclude him from being the perpetrator of the murder."

And this paragraph, in your opinion, was repeated many, many times in subsequent media articles, and I want to spend a bit of time with this. what you are saying here -- let's just talk about the failing to link David Milgaard with the offence. Is what you are saying there is that

1		there's nothing there in the semen sample that
2		says it came from David Milgaard?
3	Α	Yes.
4	Q	Secondly, you are saying it could be reasonably
5		considered to exclude him from being the
6		perpetrator of the murder, and would that be on
7		the basis that he's an A secretor or pardon me,
8		an A non-secretor, or you believed him to be an A
9		non-secretor; the semen sample, if it came from
10		the perpetrator, had A antigens and therefore
11		couldn't have come from David Milgaard?
12	A	Correct.
13	Q	How are tell me how you, I guess, rationalize
14		that opinion with what you say the page earlier
15		which you told us this morning, that this frozen
16		semen had no probative value because of lack of
17		integrity?
18	A	If you like, it's a two-phase opinion. I have to
19		accept the fact that this semen sample was put in
20		in evidence and became an issue for argument.
21		It's not for me to comment on how the court
22		directed the jury to view the weight that should
23		be placed upon this sample, but my recollection
24		was that integrity and continuity of the sample
25		was not an issue, simply the results of the

1 analysis were in issue.

А

So setting that aside and assuming therefore that the sample was in evidence, which it was, I feel that simply looking at the analysis alone provided sufficient evidence that one would reasonably exclude David.

If I called you as an expert witness at David
Milgaard's trial, would you have been prepared to
give the opinion at that time that the frozen
semen, knowing what you knew about how it was
collected, exonerated David Milgaard?

I think I would have said to you what I've said this morning, is that I do not think that this sample should be considered in evidence because of the high risk of contamination; however, if you intend to put this in in evidence, I will say that the most likely source of the blood staining in that sample, if it is blood, is as a result of crime scene contamination by the victim and therefore cannot be used to link David Milgaard with the evidence and effectively excludes him.

And if I were -- so let me just back up. Are you telling us that you would have concerns -- I mean, if I asked you the question at trial, you are a defence witness, in your opinion should we be able

1		to rely upon this frozen semen to tell us who the
2		killer of Gail Miller might be, what would your
3		answer to that question be?
4	A	No, you cannot.
5	Q	If we go back and at trial you are again giving an
6		opinion for the defence and there's no issue taken
7		with respect to integrity, I think that's the
8		second point, would you then say that this
9		evidence would tend to exculpate David Milgaard as
10		opposed to incriminate him?
11	A	I would, but remember, we still have the problem
12		of proving that this is blood, but even assuming
13		that it is, it excludes David.
14	Q	I suppose, am I correct in saying that if you are
15		on the stand at Mr. Milgaard's trial as an expert
16		witness, the question put to you that let's assume
17		David Milgaard is a non-secretor, if his blood got
18		in that semen somehow, granted there's no proof of
19		that, but if it did, would that explain why there
20		are A antigens, could that explain why there are A
21		antigens in there?
22	A	I would hope that the court would direct that the
23		evidence, the proof of contamination or the proof
24		that allows you to say David's blood is in that
25		sample would have to be provided before I answered

1		that because that hypothetical has in fact no
2		evidential foundation.
3	Q	In fact, Mr. Caldwell tried to put that question,
4		I think worded it better than I did, to Staff
5		Sergeant Paynter and the judge did provide that
6		direction, that there's no evidence of blood, but
7		again just back, if David Milgaard is a
8		non-secretor, that's the assumption at the time,
9		then the only way, and that there's A antigens in
10		the semen, the only way that it could have come
11		from him would be one of two reasons, either the
12		secretor test was wrong, or (b), somehow his blood
13		or some blood of someone else that was an A
14		secretor got into or blood type A, pardon me,
15		got into the semen; is that correct?
16	А	That's correct.
17	Q	And again, whether it was in there and whether
18		there was proof of that, I think what you are
19		saying is lookit, I can't, I mean, there's got to
20		be a foundation for that before I would answer?
21	А	Correct.
22	Q	So when you gave this opinion on September 13th,
23		1988, what were you saying about David Milgaard's
24		guilt or innocence, if anything, what was your
25		opinion based on what you reviewed, and in
	ii	

1		particular the frozen semen?
2	А	I was saying that based on the forensic evidence
3		that I had reviewed, evidence that was presented
4		at the original trial, reasonably interpreted,
5		meant that David was excluded from being the
6		source of that semen.
7	Q	Okay. If we pause there and change your
8		assumption, because we now know that David
9		Milgaard is a secretor, if you would have been
10		aware of that at the time and assumed that fact,
11		what would your opinion have been?
12	A	Then from the defence perspective, the issue would
13		have been the admissibility of that sample.
14	Q	No, I'm sorry, I just I appreciate, and I'll
15		come to that. Just September 13th, 1988, if I
16		said what is your opinion on David Milgaard's
17		guilt or innocence based on the work you did, you
18		told me that based on what was presented at trial
19		it would exclude him, and I'm saying now if you
20		would have accepted as a fact that he was a
21		secretor, and I'll come back to the integrity
22		issue, but what would your opinion have been just
23		changing the one assumption of him being a
24		secretor?
25	A	Well, then clearly he is not excluded.
	ĬĬ	•

1	Q	Okay. So then when you say from a defence
2		practice, are you saying that if you knew he was a
3		secretor, you would then focus on the integrity
4		because the sample now does not eliminate him, so
5		now you eliminate the sample; is that fair?
6	А	Yes. Effectively I would assume that from the
7		defence point of view, you attack the sample which
8		is the source of this pretty damning evidence from
9		the point of view of the integrity of the sample
10		and the issue of the identification of the blood
11		within the sample.
12	Q	If the secretor test had been done proper well,
13		I shouldn't say properly. If the secretor test at
14		the time of trial had shown that David Milgaard
15		was a secretor, which was shown later, what would
16		your observation be about the evidence against him
17		at trial, would it be more incriminating than it
18		otherwise was?
19	A	I think it would have been, yes. I mean, there is
20		a lot of other evidence that I was not aware of,
21		but clearly on the forensic side, the evidence was
22		not as exclusive as it appeared to be at the time
23		of the trial.
24	Q	And so again just getting back to sort of the
25		essence of your opinion on September 13th, 1988, I

1		think what you said is that, and tell me if I'm
2		wrong here, the qualifier is that based on what
3		was presented at trial, that should have excluded
4		David Milgaard; is that right?
5	A	Yes.
6	Q	How let's just go back to the integrity of the
7		sample, though, because I think what you say in
8		your opinion is lookit, no one should be relying
9		on this sample because of its integrity?
10	A	That's correct.
11	Q	And so if I had asked you on September 13th, 1988
12		to say, well, would you stand up in a court and
13		give your opinion and say that this sample
14		exonerates him, would you be able to say that?
15	А	Only from the forensic perspective.
16	Q	From the forensic perspective?
17	А	Yes.
18	Q	And what about the integrity what about the
19		integrity of the sample though?
20	А	That is working on the assumption that the Court
21		has accepted the integrity of the sample.
22	Q	What if I just say September 13th, 1988, forget
23		what happened at court, I want you to tell me
24		right now, based on what you looked at, can you
25		tell me that this frozen semen exonerates David
	II.	.

		Page 23453 —————
1		Milgaard?
2	A	Well, again I would say yes, it does.
3	Q	Would you be
4	А	I think I'm
5	Q	Sorry, let me try this again. If I would have
6		said tell me based on your review and your
7		comments about the integrity of the sample, not
8		what was accepted or assumed at trial, but can you
9		give me your opinion and tell me that that frozen
10		sample exonerates him?
11	А	I think it does.
12	Q	And what about your concern about its integrity?
13	А	Then it comes back to the issue as to whether or
14		not the evidence should even have been presented.
15	Q	No, and that's what I'm trying to get at, because
16		I'm asking you as an expert, tell me, should I
17		rely on this frozen semen.
18	А	Oh, I see. No, the answer is you should not, that
19		sample should not be considered reliable for the
20		reasons that I've argued here, in that the most
21		likely source of blood, even assuming that it is
22		blood, is actually contamination.
23	Q	Okay, I think I understand. If we can then turn
24		to, call up 141905, please, and this is a
25		document, this is Mr. Caldwell, the prosecutor's
	I	4

1		address to the jury, and I provided this to you a
2		couple of weeks ago, Dr. Ferris, and I think
3		you've this is his closing address and I think
4		you've told us that you did not have an
5		opportunity to review this when you gave your
6		opinion; is that correct?
7	A	That's correct.
8	Q	And if we can go to page 141937 and I just want to
9		take you through parts. This is where we started
10		talking about, it's page 32 of the address to the
11		jury, and if you've got your paper, I think it's
12		the same copy as I provided to you.
13	A	Yes. I don't have all of the pages with me.
14	Q	Yeah.
15	A	I highlighted a number of issues and pages and
16		just brought those with me.
17	Q	Sure. If you've got them, we can follow along
18		here. If you want to refer to your notes, you are
19		welcome to do so. And the Crown here is talking
20		about the three locations of spermatozoa, submit
21		desperate struggle:
22		" quite possible the person who raped
23		her achieved penetration, ejaculated
24		into the body of the deceased, that some
25		of the seminal fluid got on the panties,

1		where it was later found at the
2		laboratory; that other seminal fluid
3		drained from the body on to the snow
4		where it froze into one of these lumps
5		that was collected by Penkala."
6		Now again, just on that, do you see anything sort
7		of I mean, it's a theory. Do you see
8		anything I'm not asking for you to accept that
9		that happened, but is there anything there that
10		jumps out as being not possible or contrary to
11		what you observed?
12	A	No, that but it clearly glosses over the issue
13		of integrity of the sample.
14	Q	And I'll get to that in a moment I think.
15		"Now remember that Corporal Molchanko
16		found human pubic hair in that same lump
17		that had contained"
18		And then go to the next page, and then he talks
19		about:
20		" it is clearly a possibility that
21		this is how, the explanation of how the
22		frozen lump of material came to be
23		there, and you don't need to have expert
24		evidence on you know it from your
25		common sense"
	Ï	

1		And I think this is saying, trying to explain to
2		the jury how it came to be that there was frozen
3		semen in the snow, that it came from the scene,
4		and again I'm not asking you to agree with that,
5		but is there anything from that that you have
6		concerns with?
7	A	Probably not. Remember, we're talking about one's
8		understanding of forensic science evidence in
9		1969. I mean, the way we handle scenes today,
10		clearly the description of the collection and
11		identification of that sample in the snow would be
12		much more expansive, but, you know, I'm sure that
13		that probably was considered a reasonable
14		explanation for the identification and collection
15		of a sample in '69.
16	Q	And if we assume that the frozen lumps were semen
17		from the perpetrator, then this explanation as to
18		how it might have got there is one that you don't
19		quarrel with; is that fair?
20	А	Well, it seems reasonable.
21	Q	So then we go down:
22		"You remember that the spermatozoa in
23		the body was blood stained"
24		And I think that related to the vaginal aspirate
25		that was in the autopsy,

1 "... and he tested, later, the same 2 sample." 3 Let me just pause here to make sure I've got that 4 So he's talking about spermatozoa, the 5 body was blood stained, and that's referring to the autopsy: 6 "... and Staff Sergeant Paynter found "A" antigens in the vial which contained 8 9 the lump and he tested ..." 10 So this is the frozen lump, and: 11 "... later, the same sample for the 12 presentation of human blood and got a 13 reaction indicating the presence of 14 either blood or those two other extracts 15 he mentioned, mainly leafy vegetables or 16 leather, and that his evidence was 17 finally to the effect that he could not 18 say definitely if the person whose 19 seminal fluid he examined was a secretor 20 or was not a secretor. 21 The evidence of Dr. Emson, as I 22 said, was that the spermatozoa in the 23 body was blood stained and that there 24 are a number of ways in which blood can

get into the spermatozoa within the male

person and all of this, I submit, while it does not have the effect of identifying Milgaard alone as the source of that spermatozoa, certainly had the effect of not eliminating him either, and that is the effect I ask you to give it. I am not saying it could only be him, I am saying that it certainly has the effect of not eliminating him, he is one of the thousands.

Now the reason for that is that, of course, the spermatozoa found frozen came from a person with type "A" blood; this is established. That includes the accused and, of course, it includes many thousands of other people, but it certainly doesn't eliminate him as the possible source of that spermatozoa, it is consistent with being I ask you to remember now that he does not have to be a secretor to get "A" antigens in to his spermatozoa if the antigens are found there as a result of whole blood being in his spermatozoa for the kinds of reasons that Dr. Emson

Α

Α

mentioned. It could have got there from secreting -- because the person was a secretor, but "A" antigens are a consistent constituent of "A" blood and could be found there for the reason that whole blood was there."

Let me just pause there. Is there anything that Mr. Caldwell has said there that you take issue with?

A Yes, I do. That's extremely misleading because what he has --

COMMISSIONER MacCALLUM: Extremely what? Misleading.

COMMISSIONER MacCALLUM: Okay

Because what he has done is he has equated the sample retrieved by Dr. Emson from within the vagina has exactly the same status as the sample that was retrieved from the snow, and even Dr. Emson I believe indicated that the causes of blood contamination of the semen sample in the vagina could have been from her own blood, could have been menstrual blood and that was not an issue that was ever raised dealing with the snow sample, but to read that paragraph, the implication is that the quality of both the

1 seminal sample obtained from the vagina and the 2 seminal sample obtained from the snow are 3 identical and that's not correct. BY MR. HODSON: 4 5 Q Okay. And apart from -- I suppose could you look at it the other way and say that if the semen came 6 from Gail Miller, in other words -- I can't recall what Mr. Caldwell said, but that it could have 8 9 leaked from her, would that be an explanation, could it be her blood in there? 10 Oh, these are all explanations, but they are 11 Α 12 explanations which need evidential foundation. 13 0 Sure. So your concern then is the fact, the 14 evidentiary base for what's stated; is that fair? 15 Yes. Α 16 And then putting aside -- well, I don't mean to Q 17 say it that way, but apart from the concern that 18 you don't think there was evidence of this, what 19 he puts forward as an explanation of how this 20 semen could be connected to David Milgaard, apart 21 from the fact that you say there isn't evidence of 22 his blood being in there, do you quarrel with 23 what's said there, take issue with it? 24 Well, not really, because what he is doing is 25 outlining what he, under normal circumstances,

		•
1		would be going to prove during the course of the
2		presentation of his evidence.
3	Q	Yeah.
4	A	And what I'm saying is that in fact that proof did
5		not appear.
6	Q	Okay. If we can just carry on a bit more here, he
7		says:
8		"Now the other thing I ask you to
9		remember about that is that the "A"
10		antigens in that frozen lump could not
11		have been put there in any way, shape or
12		form from the blood of Gail Miller or
13		from the blood of Ron Wilson. You know
14		what their blood is: Gail Miller's is
15		"O"; Wilson's is "B"."
16		And that do you take issue with?
17	А	Well, that's wrong.
18	Q	In what respect?
19	A	Well, in fact my view is that the most likely
20		source of blood in the sample, if it was blood in
21		the sample, was Gail Miller.
22	Q	Yeah, I think what he says is not the blood, but
23		that the A antigens in that could not
24	A	I'm sorry, yes, correct. I'm sorry.
25	Q	So if it was blood, you are saying it could have
		1

		——————————————————————————————————————
1		come from Gail Miller?
2	A	Yes.
3	Q	As far as A antigens, you don't take issue with
4		the fact that they could not have been put there
5		from Ron Wilson or Gail Miller's blood?
6	A	Yes. I'm beginning to have sympathy with the jury
7		already because I'm getting confused.
8	Q	Okay. It goes on:
9		"It must have been from a type "A"
10		person, and type "A" persons include the
11		accused."
12		And again, I think what he's saying there, and
13		you've touched on this, is that if whole blood is
14		the explanation for antigens in the frozen semen,
15		it had to come from someone who is blood type A
16		and that includes the accused?
17	А	Correct.
18	Q	And:
19		"So I leave that phase of the matter by
20		stressing again that while this part of
21		the evidence does not, of itself,
22		identify the accused, it most certainly
23		does not eliminate him."
24		And what is your response, do you take issue with
25		that?
	I	

1	A	No. I mean, that, as presented by Mr. Caldwell,
2		what he is saying is correct, you know, I would
3		take issue with individual parts of it and the
4		validity of some of the foundation, but, I mean,
5		what he is saying is correct.
6	Q	And so that (a), it doesn't identify him as, does
7		not of itself identify him, it most certainly does
8		not eliminate him?
9	A	Correct.
10	Q	Then if we can go to 212178, please, and this is
11		the address to the jury by Mr. Tallis, and again I
12		provided you with copies of this a couple of weeks
13		ago, and if we can go to page 212217, and I should
14		tell you that this transcript, Dr. Ferris, was
15		obtained from shorthand notes and was transcribed
16		I think by a different shorthand reporter, so
17		there are some spots in here where the transcript
18		may not be complete, but I think we can get a
19		sense of what was said, and here at page 39, this
20		is Mr. Tallis, what he says to the jury, he said:
21		"Now I think it's pretty clear that
22		there is nothing in the nature of
23		fingerprints. That I suggest must be
24		But on the question of hair samples,
	Ï	

there is no suggestion of any matching

25

of hair samples. And ... it is fair
that you have these -- there may be
these ... samples that cut from a piece
of frozen ... that had been taken frozen
... but I suggest that is not of too
much significance.

There is no matching of any

There is no matching of any blood type, of body hair, pubic hair.

And these are factors that I suggest you consider very carefully. While it is true the observations were made after the date of this offence, there has been no suggestion of scratch marks or anything else on David."

Go to the next page and get onto now, call that up:

"Now in the area of the seminal fluid, I have one or two observations to make. First of all, this is no criticism of Dr. Emson, but I think it is unfortunate that the sample that was from the vaginal cavity was not saved, because if it had been saved it is quite clear from his evidence that the blood could have been analyzed for grouping."

Now let me just pause there, and I'm not sure if you recall, but when they did the autopsy they did a vaginal aspirate, Dr. Emson looked under the microscope and identified spermatozoa and I believe I think some traces of blood and it was discarded, not saved. You are aware of that happening?

A Yes, I am.

Q And here I think Mr. Tallis is saying it's unfortunate that it wasn't saved because it could

Α

And here I think Mr. Tallis is saying it's unfortunate that it wasn't saved because it could have been analysed for blood grouping. Is that fair?

Yes. Again, I have to come I think to Dr. Emson's defence in this case. In those days many pathologists routinely examined aspirate from the vagina specifically to identify the presence of spermatozoa and identify semen and it would be quite common to find red blood cells and I suspect that his initial impression was that the blood cells would be normal contamination from the girl herself. I can't defend his discarding of the sample, but it may be that at that time he decided that there would be ample other evidence to help identify semen and any blood.

Q And am I correct that if that had been saved, that

1		could have been analysed, and if A antigens had
2		been discovered in the vaginal aspirate you can
3		exclude it coming from Gail Miller.
4		And I think the other point that
5		may have been raised by Dr. Emson or someone else,
6		I'm not sure that you could exclude other partners
7		that she may have had prior to the assault, is
8		that fair?
9	A	Yes. Effectively, we could have ended up with an
10		identical result to the seminal stain in the snow,
11		and the issue then would have been the relative
12		integrity of each sample, and clearly the vaginal
13		sample would have been much preferable in terms of
14		its ability to interpret.
15	Q	Right, and if it would have showed A antigens,
16		then certainly that would have supported the fact
17		that it came from an A secretor?
18	A	Yes, and it would be much less likely that
19		contamination had resulted from it coming from an
20		A secretor.
21	Q	Okay. So then we go back, and Mr. Tallis says:
22		"Now much is said of this really is
23		of no significance. Now members of the
24		jury there is no suggestion that other
25		than a non-secretor and the
		1

1 possibility of secreting the blood 2 factor in his seminal fluid is great --3 . . . " , and I think we've heard evidence that 85 percent 4 5 of the people secrete; is that correct? Correct. 6 Α "... the effect of that evidence that the Q seminal fluid contained what are called 8 9 "A" antigens. Now this may be, and I 10 suggest is something that you should 11 consider pretty carefully, and as you 12 see, if in fact the donor of that 13 seminal fluid was an "A" group secretor, 14 and there was no blood, as such, in the 15 seminal fluid from that person with that 16 "A" grouping, it cannot have been, the 17 man could not have been the ..." 18 and then, unfortunately, it tails off. 19 "Now it is suggested that the traces of 20 blood that Sergeant Paynter found --21 that might have been blood -- now 22 frankly I am not here to argue that 23 there was ... at that time of year and I 24 am not -- ... anything to suggest that 25 there is ... out in that alley at that

time, but what I say to you, members of the jury, is this: when you get down to the question of reasonableness ..." --

MR. PRINGLE: Could I just --

MR. HODSON: Sure.

MR. PRINGLE: Mr. Hodson said it "trailed off" there, and I know he didn't mean that, but there's an affidavit from the court reporter that indicates that where you see three dots -- this is the court reporter that ultimately prepared the transcript -- that means several words are missing. So it's not a situation where it trails off, but many of the words, some of the words that Mr. Tallis said at that point are not on the transcript.

MR. HODSON: Yeah. I'm sorry, I should have clarified that, and I probably didn't explain it enough. It is not -- it was taken from a shorthand report, and certainly Mr. Tallis will be asked to expand upon what was said, and Mr. Pringle is correct that where it does trail off, it's not that he stopped talking, it's just that the shorthand was not decipherable by the court reporter; is that fair, Mr. Pringle?

MR. PRINGLE: Yes.

1		BY MR. HODSON:
2	Q	Umm, okay. So here:
3		" when you get down to the question
4		of reasonableness, first of all, Dr.
5		Emson points out that the blood in the
6		seminal fluid in the vagina that he
7		threw away spermatozoa could well
8		have come from Miss Miller's "O" group.
9		It could have come from her in two ways:
10		from the inflammation that was referred
11		to, or from the possible onset of
12		menstruation; or from the donor."
13		So we pause there, and is that correct?
14	A	Yes.
15	Q	Yes. And would that respond to Mr. Caldwell's
16		comment about trying to relate the blood in the
17		vaginal aspirate to the frozen semen?
18	А	Yes.
19	Q	And so in other words saying "well no" tell me
20		if I'm wrong about this please, Dr. Ferris but
21		"here is the reason why there was blood in the
22		vaginal aspirate as opposed to" he does say it
23		could come from the donor?
24	А	Yes.
25	Q	"And then let's examine another point in

1 this connection, when that frozen lump was found out in that area that had been 2 3 . . . " , 4 and again a break: 5 "... may I suggest to you that if there was blood in this sample, as he thought 6 there might be, he could not say that 8 for sure, but let's forget what ...", 9 and then a break: 10 "... for the moment and be reasonable Is it not more likely that 11 about this. 12 since he scooped up the area to get the 13 patch where the blood had seeped 14 through, that it was some other blood in 15 Is this reasonable? the snow? 16 suggest not. And as you see, if the 17 blood that got into that seminal fluid 18 was "O" group, and the donor didn't have 19 any secreted blood in his seminal fluid, 20 then of course, the result would have 21 proved it. There is no suggestion in 22 respect of the sample that that was done." 23 24 And, again, do you agree with that? 25 Α Yes I do.

1	Q	And scrol	l down:
2			"There is no evidence that David is a
3			person who is afflicted with any
4			condition which caused blood to be in
5			his seminal fluid, and I suggest to you
6			that these other matters that I raised
7			with you are more probable than the
8			possibilities that have been urged upon
9			you."
10		And I bel	ieve what he is referring to there is
11		about how	blood got into the semen.
12			"Now",
13		and then	there's some breaks:
14			" in this way because I suggest to
15			you that it is reasonable."
16		And then	a couple of breaks:
17			"Frankly, for any counsel to suggest in
18			these circumstances, and I think that
19			you would have felt the same way and
20			while you would not",
21		and then	a break, and then he says:
22			"Now those are factors when you are
23			assessing the forensic evidence, that I
24			invite you to consider very critically
25			and I suggest to you that they",
			4

1 or: 2 "... I suggest to you that they tell 3 . . . " , and that might be "fall": 4 5 "... heavily in favour of David. These are factors which are dealt with by 6 honest and reliable witnesses, and I say 8 this with regard to the crime detection 9 laboratory people and the identification 10 officers who dealt with this ... very fairly and very frankly, and I am not 11 12 here to suggest that someone taking a 13 syringe and drawing a little blood ... I 14 am not suggesting that, but I am putting 15 it to you on the basis of that, I think 16 . . . " , 17 and then a break: 18 "... and draw to you that when you 19 consider this, when you consider the 20 nature of the alleged struggle and so 21 forth the question of hair samples and 22 so forth, you just bear this in mind." 23 Now we'll pause there. And, again, what is your 24 comment on what Mr. Tallis said -- and I 25 appreciate that it's not a complete transcript --Meyer CompuCourt Reporting =

1		but from what I read to you as far as what he put
2		forward about the value or the exculpatory nature
3		of the frozen semen?
4	A	Well I think it's clear that he is highlighting
5		all of the issues that relate to integrity and
6		contamination of all of these samples, and I think
7		it's not for me to suggest what would be in the
8		minds of the jury, but remember these are
9		arguments that he is presenting to negate the
10		effect of other evidence that has been presented
11		against David Milgaard, and clearly the problem is
12		that once the jury have a picture in their mind,
13		raising issues such as contamination and so on are
14		difficult to put into effect. But, I mean, he has
15		very correctly, I think, and very eloquently
16		listed all of the issues relating to the very
17		problem of contamination.
18	Q	And so the contamination being the explanation as
19		to why there might have been a presumptive test
20		for blood in the semen?
21	A	Correct.
22	Q	What about his comments that no evidence that
23		David Milgaard bled into his semen and the effect
24		of whether or not the frozen semen is
25		incriminating or exculpatory?
	I	

		1 age 20414
1	A	Well, again, those are absolutely correct and
2		valid comments to make.
3	Q	Would and, again, I appreciate that you said
4		things differently in your opinion than what Mr.
5		Tallis did, but are they, would you view them as
6		being inconsistent or similar approaches to the
7		evidence?
8	А	I think he's got a different approach to my view,
9		I mean I was looking very specifically at the
10		issue of the presence of a blood type and the
11		issue of secretor status, and I really was only
12		linking those.
13	Q	Yes.
14	А	He is presenting the jurors with a much broader
15		view of this issue.
16	Q	If the evidence was such that the frozen semen was
17		exculpatory in that it would exclude David
18		Milgaard because he was believed to be a
19		non-secretor, would there be maybe a reason not to
20		challenge the integrity of the sample? In other
21		words if it's helpful, I think what you referred
22		it to earlier, once it's harmful you can attack
23		the integrity, but if it's exculpatory might you
24		simply let it go and not challenge something that
25		might be exculpatory?

1	А	Well the answer is that sure, I mean, you can
2		argue it either way. This is a judgement call for
3		counsel in every issue relating to forensic
4		evidence. You get to a point where the very
5		presence of the evidence at all can confuse the
6		jury, and no matter how careful you are at
7		explaining what you mean and I am aware of this
8		as a forensic pathologist it's not unusual for
9		the lawyers and the jurors to get the wrong end of
10		the stick, so it's a, it's a judgement call for
11		counsel as to whether or not they make an issue of
12		this sample.
13	Q	Did and, again, I went through your initial
14		opinion of September 13th, 1988; if you would have
15		been provided with copies of Mr. Caldwell and Mr.
16		Tallis' closing address to the jury would that
17		have, in any way, affected what you said in your
18		opinion?
19	A	It might have in that I think most of the
20		arguments that I made in my opinion had already
21		been presented to the jury, but I think within
22		some of the transcripts they there is an
23		evidence there is an emphasis on, for example,
24		the presence of blood in the seminal sample, which
25		in fact was not proved but may have left the jury

1		with very limited options in terms of working out
2		how that blood got there. I don't know whether I
3		can ask the Court to refer to a page in
4		transcript?
5	Q	Yes, you may. Are you referring to Sergeant
6		Paynter's transcript?
7	А	It's page 210902.
8	Q	Yes, we can have that called up.
9	А	And if we look at just line 19,
10	Q	Maybe
11	А	just above line 20, may I read?
12	Q	Yes?
13	А	" that he got what he calls a positive
14		presumptive test for blood in the
15		sample, which in our language means that
16		he found a minute trace of blood as such
17		in the sample."
18		Someone is actually saying, positively, that
19		blood was present.
20	Q	If we could just pause here for a moment. If we
21		go back to page 1, I think this is Mr. Caldwell's
22		opening address, but maybe we can go back to page
23		1 of this document which would be 858. Yes, this
24		is Mr. Caldwell's opening remarks, so if we could
25		go back to the page 210902.

1	A	Effectively what has happened here is that the
2		jury are being primed to believe that there is
3		blood in the sample, and even though all of the
4		subsequent evidence says that this may not be the
5		case, at no time are the jury told I believe
6		except from a couple of important cautions by the
7		judge that this statement was wrong.
8	Q	There is reference and maybe I can bring it up
9		after the break in the course of Mr. Caldwell's
10		examination of Staff Sergeant Paynter on a
11		question that was objected to by defence counsel,
12		and the judge stated "there is no evidence of
13		blood in the sample", and I think I'll maybe bring
14		it up after lunch; were you aware of that
15		reference?
16	А	Not at the time I did my opinion. But, I mean,
17		this is what I mean, I think the Court were well
18		aware of the fact that the integrity of that
19		sample was an issue, and that blood was not had
20		not been proven to be present.
21	Q	So just back to the question of whether, now
22		having read what was said in the closing address
23		by Crown and defence, I think you are saying that
24		might have affected your opinion; is that correct?
25	А	Umm, yes, it well, it certainly would have. I
		Meyer CompuCourt Reporting

1		would have had to reword the opinion. I think
2		what I would have been stating was "look, I am
3		simply confirming what was effectively presented
4		in court as evidence".
5	Q	And then I think your subsequent comments are
6		that, based on what you read, you would have
7		concerns about what the jury might be thinking and
8		what they might understand or not understand about
9		this evidence; is that
10	А	That's right. And it's the old problem of towards
11		the end of the trial the jury may already have
12		acquired tunnel vision and it's very hard,
13		sometimes, to switch on the lights.
14	Q	And would it be fair to say that, since you viewed
15		the evidence on the frozen semen as being
16		exculpatory, that in order for the jury to have
17		convicted Mr. Milgaard they either disregarded it,
18		misunderstood it, or understood it but found some
19		and we don't know but found some way to
20		rationalize that with their verdict; is that fair?
21	A	Yes. I suspect they disregarded it, but I don't
22		know.
23	Q	Right. And I'm not sure any of us will ever know
24		because we are unable to talk to the jurors, but
25		okay.
	İ	

1		If we could go ahead to 155426.
2		And this is a follow-up letter from Mr. Wolch to
3		you asking for clarification on a point, and I
4		think what maybe I'll just try and summarize
5		this, maybe speed things up. I think what he was
6		asking you is to say that if, when you look at the
7		frozen semen sample and there's blood in there, if
8		you are not if there is not enough blood to do
9		a proper test to identify it for blood does that
10		mean that it's also not possible to test for A
11		antigens, I think is what he is saying?
12	А	Umm, yes. Now that is, that really is beyond me,
13		my I don't know what they were capable of doing
14		in 1969.
15	Q	And
16	А	I would have thought that if they could not
17		identify blood then the antigen tests, which were
18		fairly crude, may not have been reliable.
19	Q	Okay.
20	А	But I don't know.
21	Q	Actually, let me restate it, I didn't properly
22		state the issue. I think what Mr. Wolch was
23		asking you is that "lookit, if there is not enough
24		blood in there, in the frozen semen to give a
25		positive, reliable test that there's blood in

		-
1		there, does it follow that there can't be enough
2		blood to leave A antigens in the sample"?
3	A	Okay. Well, again, I can't answer that
4		definitively today. I'm not sure what I said in
5		the letter.
6	Q	Yeah. I think you
7	А	But in fact I think they might have been able to,
8		but I don't know.
9	Q	I think you went to a fellow by the name of
10		Mr. Brian Jay if we can call up 002486, and go
11		to page 493 and I think you asked now Brian
12		Jay is someone you knew from the Centre of
13		Forensic Sciences in Toronto?
14	A	Yes, that's correct.
15	Q	And when you say, he:
16		" agrees with",
17		you:
18		" that it is quite likely that if
19		there was not sufficient blood in the
20		seminal specimen to positively identify
21		it as blood, then it is unlikely that
22		there would have been sufficient blood
23		for this sample to have been grouped as
24		Type A."
25	A	Yes. I have to tell you that I also spoke to, at

1		that time the Head of the Biology Division of the
2		Home Office central research establishment in
3		Aldermaston, Mr. Russell Stockdale, and he gave me
4		the same answer as Brian Jay.
5	Q	And so that, if I understand that correctly, that
6		I think what Mr. Wolch was getting at is that if
7		you can't, if there is not enough blood to confirm
8		the test for blood, then there can't be enough in
9		there to explain the A antigens?
10	А	That's correct.
11	Q	And so that if the test for blood saying "there
12		is not enough blood in there to confirm blood", it
13		follows then that the blood can't be the source of
14		the A antigens, is that
15	A	That's correct. The one unknown in this is that
16		as, if I remember from talking to Mr. Jay and to
17		Mr. Stockdale, is that they were giving their
18		responses on the basis of first principles and
19		hadn't actually got case experience to tell me you
20		can or you cannot make this test work.
21	Q	Now you also say in this letter, if he we can go
22		down, you say:
23		"The problem seems to be knowing exactly
24		what techniques were available to the
	li .

Д

What he does tell me, however, was that there was no accurate means of determining secretor status in the Forensic Science Laboratory at that time since the Lewis antigen, which is the modern method of determining secretor or non-secretor status, had not been adopted as a routine laboratory procedure."

Can you elaborate on that, please? This is, my understanding is that the forensic labs had not accepted the Lewis antigen test, which does identify secretor status. There are three principal Lewis antiqens, which are similar to the ABO secretor types, but they are different proteins. This is a method of determining secretor status, it was a method that was discovered and I believe first written up about 1947-'48, it's referred to in most of the old textbooks. It was a standard procedure in hospital laboratories, but it was not used in forensic science laboratories because they normally dealt with bloodstains, and the Lewis test was not reliable on bloodstains. could have tested whole blood from David and got

1		secretor status, but because the forensic science
2		laboratories were not using it, I believe that was
3		probably the reason they didn't do it.
4	Q	Let's just go back to 1969. What you are telling
5		us I think and please correct me if I'm
6		wrong that forensic labs, at that time, were
7		not using the Lewis antigen test to test for
8		secretor status?
9	А	As far as I know, that's correct. Remember, as I
10		said earlier, in those days a lot of forensic
11		science, certainly as far as biology was
12		concerned, was transfer technology from hospital
13		laboratory work, and it's only really relatively
14		recently that forensic science research has become
15		independent and is evolving on its own.
16	Q	And what Mr. Jay appears to be telling you is that
17		in 1969:
18		" there was no accurate means of
19		determining secretor status"?
20	А	Other than looking at samples of saliva and other
21		body fluids.
22	Q	Do you recall either hearing from Mr. Jay or from
23		others elsewhere that the method of testing David
24		Milgaard for secretor status in 1969 may not have
25		been accurate or may have been suspect?

		——————————————————————————————————————
1	А	I recall someone saying that, but I don't remember
2		who.
3	Q	Okay. And around this time would you have had any
4		discussion with Mr. Wolch about that, or Mr.
5		Asper?
6	A	Not as I recall.
7	Q	Then, if we can talk about this Lewis antigen, so
8		in 1988 are you saying, here, that the secretor
9		test can be done with blood?
10	A	Yes.
11	Q	Okay.
12	A	The Lewis antigen test can be identified under
13		it's, I think, one or two of the Lewis antigens,
14		if identified, indicate secretor status.
15	Q	Now you would have had David Milgaard's blood for
16		the DNA work; is there any reason that you did not
17		conduct the Lewis antigen test on this blood to
18		determine his secretor status?
19	А	I didn't because secretor status was not an issue
20		for me. Remember, at the time that I examined
21		David's samples for DNA, I didn't even know of the
22		secretor status issue.
23	Q	No, I'm sorry, at this time, October of 1988 or at
24		a later date,
25	А	Oh, yes.
		•

		1 age 25400
1	Q	whether you could have you would have you
2		had Mr. Milgaard's blood, presumably?
3	А	I'm not sure that whether we still had it at
4		that time.
5	Q	Oh, okay.
6	А	I suspect we didn't. But even then, if I had
7		received a call asking me to determine secretor
8		status, I would not have done it because that
9		would have been inappropriate. It would have been
10		better done within a proper haematology laboratory
11		and not our
12	Q	I see.
13	А	forensic pathology laboratory.
14	Q	Okay. That's probably an appropriate spot to
15		break.
16		(Adjourned at 11:58 a.m.)
17		(Reconvened at 1:32 p.m.)
18		BY MR. HODSON:
19	Q	Good afternoon, Dr. Ferris. Just to clarify
20		something, this morning I had referred to
21		Mr. Tallis' closing address to the jury and after
22		Mr. Pringle rose to indicate that the breaks in
23		the transcript were not Mr. Justice trailing off,
24		but rather due to the transcription, and having
25		raised that concern and me having agreed with it,
		Meyer CompuCourt Reporting

I think after that I referred, when I was reading part of it, that he trailed off again and I apologize for that, so just for the purposes of the record, I think that transcript, and certainly we'll hear from Mr. Tallis on that, that the breaks in there are from the shorthand report and the transcription as opposed to Mr. Tallis trailing off.

If we could go to 000002,

please, and this is the application that was made by Mr. Milgaard in December of 1988 to the federal minister, and were you aware that that application was made at that time, or around that time?

I was made aware of that later, but I was not made aware that it was going to be made.

And I take it you would have known, the work you were doing for Mr. Milgaard, that one of the, or that their objective was to present whatever they could to the Federal Minister of Justice as part of a review process?

Yes.

A Yes.

Q

- Q And so that part of your opinion, I guess your September 13th, 1988 opinion, would form part of that?
- A Yes.

1	Q	You would have known that? Just at the bottom
2		here, there's a reference to again:
3		"Dr. Ferris's evidence and credentials
4		as explained in the Application that
5		follows is scientific evidence of a very
6		compelling nature which, in our opinion,
7		had it been available at the time, would
8		have clearly resulted in an acquittal."
9		And again, these aren't your words, but just, if
10		I could get your take on that, whether your
11		opinion, had it been available at the time, in
12		your view do you think that would have resulted
13		in an acquittal? Are you able to comment on
14		that?
15	A	I think I've been a forensic pathologist and given
16		enough opinion evidence in court to know that
17		that's not necessarily the case. I think juries
18		can often make decisions that don't necessarily
19		coincide with what seems obvious science.
20	Q	And I'm just trying to understand, and again I
21		appreciate these aren't your words, but whether
22		what was it that you were putting forward that was
23		not available at the time that would have made a
24		difference in the jury's verdict?
25	A	Well, I think if we look at the opinion as I wrote

1 in the light of the final addresses to the jury that I am now aware of, it could be argued, in 2 3 fact, that my opinion would at the most have 4 simply reinforced the position, or some of the 5 positions that the defence were taking. I don't think that it necessarily would have overridden 6 other witnesses' evidence of which I'm aware. If we could go to page 000016, just get a comment 8 9 on this, and again I appreciate these are not your 10 words, Dr. Ferris, the application states: "The scientific evidence was presented 11 12 at his trial but it is submitted that it 13 was not understood. Perhaps it was too 14 new an issue for counsel and for the 15 Judge." And then goes on to talk about: 16 17 "The Trial Judge simply ignores the 18 issue in his charge to the jury and more 19 particularly does not point out that on 20 the evidence given at trial the evidence 21 exonerated David Milgaard." 22 Did you have any views or opinions at the time 23 that you would have expressed about this being 24 too new an issue for counsel and/or for the 25 judge?

1	А	No, I don't. I certainly agree that the
2		presentation of scientific evidence is always a
3		problem and making a jury understand its
4		importance may sometimes be very difficult, if not
5		impossible, but again, in retrospect, having read
6		the statements and the addresses to the jury, it
7		was quite clear to me that the judge certainly
8		understood the import of that evidence.
9	Q	If we could go to 000074, actually 073, and this
10		is part of the application, and you had mentioned
11		this morning your concerns about what the evidence
12		was about blood. If we could actually just go up
13		a bit, and this is actually part of the
14		application, and this is where Staff Sergeant
15		Paynter says:
16		"A Yes, sir; there was insufficient blood
17		in this sample - or coloring in this
18		sample that I was able to attempt any
19		confirmation tests to absolutely prove
20		that there was blood present."
21		And the judge says:
22		"Q It turned out to be useless then, didn't
23		it?
24		A Chemically I could not say that it was
25		definitely blood there "

1		And scro	ll down, Mr. Caldwell then asks:
2		"Q	And as I understand you, Staff, this
3			would be a matter of the quantity you
4			had to work with?
5		А	That is correct, sir.
6		Q	And can you describe or not the quantity
7			of blood revealed to you in this way?"
8		And then	Mr. Tallis objects saying:
9			"My Lord, my learned friend is using the
10			question of quantity of blood and with
11			the utmost"
12		Deference	e I think it should be, and then The
13		Court say	ys:
14			"There is not evidence whatsoever of
15			blood."
16			"And I think accordingly the question
17			should be framed differently."
18		And then	the next page, The Court says:
19			"Well, there is no proof of any blood."
20		Do you re	ecall reading that part of the evidence
21		about	when you expressed your opinion?
22	А	Not at t	he time that I expressed my opinion, this
23		is evide	nce that I didn't have until a few weeks
24		ago, but	if you go back to the top line of the
25		previous	page

1	Q	Yes.
2	A	I think there's an important statement and an
3		important answer there and it says:
4		"A I obtained a positive result for blood
5		with this test."
6		And clearly that was wrong, and I know that all
7		of the subsequent questions and answers are
8		directed to clarifying that, but nevertheless, a
9		statement was made, "I obtained a positive result
10		for blood with this test," and I think this is
11		part of the problem in this case, is that
12		occasionally there were statements made which
13		were in fact incorrect and the difficulty then is
14		can you be sure that subsequent clarification
15		will correct that error.
16	Q	If we could maybe just go back on this point, to
17		the previous page, I'm sorry, and again this is
18		from Staff Sergeant Paynter and he's talking about
19		the false positive reaction, and:
20		"Q In other words, it's something from the
21		vegetables that's there and not blood
22		and mistaken for blood, is that what you
23		mean?
24		A No sir; I'm saying that the test -
25		when tested against other substances -
	İ	

		. ago 20.02
1		a few other substances will give a
2		false positive and for that reason I
3		cannot positively say that a substance
4		is blood from using this test alone."
5		And I think that's what you told us?
6	A	Yes.
7	Q	That you can get a positive test result for blood,
8		but that doesn't mean it's blood?
9	A	That's correct.
10	Q	And is that would you agree that's what Staff
11		Sergeant Paynter is saying there?
12	А	That's correct.
13	Q	And he says:
14		"Q It's not much good then, is it?
15		A Well, we use it as a screening test to
16		eliminate stains and then if it is
17		positive we attempt to do a further
18		test to positively identify it as
19		blood if there is sufficient there."
20		And I think you agree with that; is that correct?
21	A	That's correct.
22	Q	And then scroll down:
23		"Q But those are the two subjects if you
24		will on which you found it to give a
25		false reading so to speak?
	II	

			——————————————————————————————————————
1		А	That is correct.
2		Q	And have you found it did give a false
3			reading with any other substances you
4			have tested?
5		А	No, sir.
6		Q	Now, when you on the second occasion
7			tested the contents for the presence of
8			blood as such, what result did you
9			obtain?
10		А	I obtained a positive result for blood
11			with this test."
12		And is S	taff Sergeant Paynter not saying the same
13		as he sa	id before, it's a positive test for
14		blood, b	out that doesn't mean there's blood?
15	A	No, you	can't have a positive test on a
16		presumpt	ive test.
17	Q	Okay, ca	n you
18	A	Because	well, a presumptive test is what this
19		has alwa	ys been called, and in fact Sergeant
20		Paynter	has previously referred to it as a
21		presumpt	ive test for blood, and all that it is is
22		it's pos	itive as a presumptive test for blood
23	Q	Okay.	
24	A	it is	not a positive test for blood, and this
25		is it	really is a problem when you changed that
			1

1 emphasis. 2 If we can go to 155493, please, this is a letter 0 3 from you to Mr. Asper, April 11th, 1989, and there's an earlier letter, just to give you a bit 4 5 of context, where once the application was filed on behalf of David Milgaard, Federal Justice asked 6 Mr. Asper to send in copies of various documents, and I think Mr. Asper then wrote to you about 8 9 them, and if we can just scroll down, you say: "We still have retained in our 10 possession the following exhibits which 11 12 were released ..." 13 Etcetera. And then further down you say: 14 "I shall await your instructions as to 15 the best way to deal with these 16 exhibits." 17 So this would be approximately 14 months, 15 18 months after you received them; is that correct? 19 Yes, it would appear so. 20 And then down at the bottom it says: 21 "I did hear from the CBC that they were 22 interested in doing a program on the 23 Milgaard case but I suspect that with 24 the recent CBC strike, their plans have 25 been somewhat derailed."

1		Were you involved in discussions with Mr. Asper
2		or the CBC about a program on the Milgaard case?
3	А	I actually can't remember anything about that at
4		all. I don't even remember whether there was a
5		program. I don't recall at all.
6	Q	Then 155495, this is a letter May 3, 1989 from Mr.
7		Asper to you advising that the Fifth Estate is not
8		proceeding:
9		"However, a reporter from the Winnipeg
10		Free Press as well as a local CBC news
11		reporter are currently investigating the
12		situation. We have provided both
13		reporters with your name and address
14		etc."
15		Would that be and we'll see a bit later, Dr.
16		Ferris, media reports. Would that be common, for
17		you to where you give an opinion of this
18		nature, to then be involved in the media
19		discussing what you concluded, etcetera?
20	A	It would be unusual for me to discuss a case that
21		was subject to continuing investigation, I
22		wouldn't normally do that.
23	Q	And why not?
24	A	Well, as far as I'm concerned, this was I may
25		be incorrect in the term, but certainly in my, as
	Ĭ	

1		far as I would understand, this case was back as
2		sub judice, it was no longer a completed case, it
3		was effectively being reinvestigated.
4	Q	Right. And that would be the application to the
5		Federal Justice Minister?
6	А	Well, that would be my understanding. I'm not
7		clear of what the legal status would be, but I
8		certainly wouldn't normally discuss that without
9		the direct consent of the lawyers involved.
10	Q	Okay. Now, in this case do you recall discussing
11		that with Mr. Asper, Mr. Wolch or Mrs. Milgaard
12		about the extent to which you should be publicly
13		commenting about the case?
14	A	I don't remember that.
15	Q	And I will take you to some let me back up.
16		Certainly your report, were you aware that your
17		report was forwarded to the media and quoted
18		extensively in media publications?
19	А	Yes, I became aware of that.
20	Q	And did you have any issue with that?
21	A	I probably was a little concerned about it, but,
22		you know, clearly there were reasons why Mrs.
23		Milgaard and Mr. Wolch wanted that report
24		released.
25	Q	What would your concerns have been?
	1	

1	A	I suppose I have an inherent distrust of trial by
2		press.
3	Q	And could you elaborate?
4	A	Well, we have already been discussing this morning
5		the difficulty of getting jurors to understand
6		evidence in what has to be recognized as probably
7		the ideal situation and to have the lay public
8		understand an extracted piece of evidence which
9		may be taken out of context in the newspapers is
10		obviously very risky and I would have thought that
11		it's very difficult to control.
12	Q	And that would be the concern with your report,
13		that parts of it might have been taken out of
14		context?
15	А	Yes.
16	Q	Do you have any recollection of that happening
17		or
18	А	I don't.
19	Q	We'll go through some articles here and I may ask
20		you that question. If we can go to 277637, and
21		just for the record, so this is July 5, sending
22		the exhibits back to the Court of Queen's Bench.
23		Now, I see at this time, if we
24		can just go up to the top, this is a different
25		letterhead than from before, D.N.A. Genetic Typing

1		Laboratory. Was this the same lab that you had
2		used before?
3	А	Yes. At that stage we had an established
4		laboratory and we had our own letterhead.
5	Q	And I think you told us that the lab shut down at
6		some point after you did the work in February,
7		March of '88. Would it have still been operating
8		in July of '89?
9	A	Yes, the lab was still operating. Funding had
10		ceased, but my Ph.D. student was still working in
11		the laboratory and in fact we didn't, I suppose,
12		completely close the laboratory and empty the
13		facility until about 1991.
14	Q	If we can then go, I showed you the May 3, 1989
15		letter where Mr. Asper told you that he gave you
16		your name to some reporters. If we could go to
17		025909, please, and this is an article by Dan
18		Lett, August 5, 1989, if we can just go to the
19		next page, and I don't believe that you are
20		quoted, your report is quoted here from my review
21		of the article, it doesn't look like you would
22		have talked to Mr. Lett. Let me just go through
23		this and maybe you can tell us that. It says:
24		"In an attempt to further analyse
25		forensic evidence presented at the
	I	

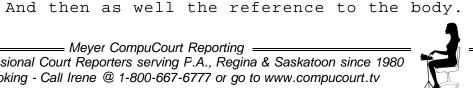

1 trial, Asper sought the services of 2 Dr. James Ferris, a noted Canadian 3 forensic pathologist." 4 And then the headline, "Proves -- or byline, "Proves Innocence": 5 "According to Ferris's report, in which 6 he re-examined extensively the trial transcripts and physical evidence, the 8 9 semen sample was incorrectly analysed by 10 RCMP pathologists and in fact proves Milgaard's innocence." 11 12 Would you agree with that headline and that 13 paragraph? No, I would not. 14 Α 15 Why not? 16 Well, first of all, I don't believe that I ever Д 17 claimed that the sample had been incorrectly 18 analysed by the RCMP pathologists, I mean, that's 19 not correct at all, and that, on the basis of that 20 fact it proved Milgaard's innocence, I mean, 21 that's non-sequitur, that's a very loose 22 interpretation of my opinion, and that's exactly 23 the sort of problem that I think I was alluding to 24 They've taken an opinion, they have

extracted parts of it and they have applied it.

1 mean, to say even I re-examined extensively the 2 trial transcripts, that's not correct. I examined 3 extensively the trial transcripts relating specifically to the forensic evidence, but not any 4 5 others, so it's very easy to create a misleading impression and that's exactly the sort of 6 paragraph that does concern me. 8 And then it goes on to say the quote from your 9 report: 10 "On the basis of the evidence that I have examined, I have no reasonable 11 12 doubt that the serological evidence 13 presented at the trial failed to link 14 David Milgaard with the offence, " the 15 report stated, "and in fact, could be 16 reasonably considered to exclude him 17 from being the perpetrator of the murder." 18 19 And I read that this morning, and I think what 20 you told us is that that assumed the integrity of 21 the sample; correct? 22 That's right, and it does not prove Milgaard's 23 innocence, which is what the introductory 24 paragraph says.

25

Q

Okay.

1		From having read this part of the article, I think
2		this is the only part that refers to you. Are you
3		able to tell us whether you would have spoken to
4		Dan Lett before he wrote this article?
5	A	No, I don't think I did, and I actually haven't
6		seen this before.
7	Q	If we could go to 155497, and this is an August
8		8th, 1989 report from Patricia Alain to Mr. Eugene
9		Williams, and I believe Ms. Alain was a serologist
10		or yes, I think a serologist with the
11		Government of Canada. Are you familiar with her
12		at all?
13	A	Yes, I have met her, but not for many years.
14	Q	And just a couple of parts here. They are viewing
15		the comments of you in the report that was
16		submitted to Justice and if we can go to the next
17		page, she reports here:
18		"Therefore, assuming that the donor of
19		the saliva is a non-secretor becomes a
20		questionable assumption. As serologists
21		are aware, the quantity of antigens
22		present in the saliva of secretor
23		individuals will be variable during the
24		day. Dilution can be a factor,
	1	

particularly if someone has consumed a

1		large amount of liquids e.g. water,
2		coffee, etc. It is known that the body
3		itself will produce variable amounts of
4		antigens during the day. In other
5		words, the absence of "A" or "B"
6		antigens in a stain that has been
7		identified and proven to contain saliva
8		does not definitely prove that a person
9		is a non-secretor."
10		Would you agree with that comment or are you in a
11		position to comment on that?
12	А	Yes, I would agree with that, but remember, she is
13		not addressing that from the perspective of the
14		evidence that was presented at the trial, that's
15		her conclusion based on all the evidence that she
16		is aware of at that time. I was only at the time
17		reviewing the evidence that had been presented to
18		the jury.
19	Q	I see. But as far as what she says in that
20		paragraph about the, and I think it's the
21		reliability of the saliva test that was described
22		at trial, do you take any issue with what she says
23		there?
24	Α	No, she's quite right.
25	Q	And then this paragraph talks about the:
		Mayor Communicated Personaling

1 "... screening or presumptive test which can be indicative of blood was 2 3 positive." And then it goes on: 4 5 "A positive reaction does not mean that blood is present, only that it could 6 be." 8 And would you agree with that? 9 Α Yes. 10 If we could now go to, there's a couple of video 11 clips and some newspaper articles at the time. 12 we could call up 230 -- sorry, let me back up. 13 Yeah, 230046, I think just if I can see it on the 14 screen, the tape recording -- no, actually 230173, 15 and I believe there's a video exchange here. Ιf 16 we could -- I'm going to play just part of a news 17 clip here that you were interviewed, it's at the 18 three minute mark, it's just a short clip. 19 Sorry, if we could just scroll back, and 20 I think the date on this is October, 1989, but I 21 stand to be corrected. Just go back 10 seconds on 22 that tape. 23 VIDEO CLIP PLAYED 24 "REPORTER: ... in the snow four days after 25 the murder. David Milgaard has spent 20

1 years in prisons across this country, in 2 part because he has always refused to 3 admit quilt. Even saying sorry would have improved his chances for parole, 4 5 but Milgaard wants vindication and now 6 he says there is new evidence compelling enough he hopes to have the Justice 8 Department reopen his case. 9 DR. FERRIS: I would not have found him 10 guilty. REPORTER: Dr. James Ferris heads the 11 12 forensic pathology department at the 13 Vancouver General Hospital. 14 DR. FERRIS: If I was to look at it purely 15 analytically as a forensic scientist, I 16 think I would probably have said there 17 was not enough evidence to convict. 18 REPORTER: Dr. Ferris was approached by 19 Milgaard's family to examine the court 20 transcripts and evidence presented at 21 the trial. He believes the semen sample 22 discovered in the snow bank four days 23 after the murder did not match 24 Milgaard's and that the court did not 25 understand the forensic evidence as

presented.

20

21

22

23

24

25

There is almost no element of DR. FERRIS: the entire case which does not raise some questions and the validity of the semen itself collected three or four days after the assault, clearly an issue with that, there's the whole question of an assault at minus 40 degrees Celsius, that's an area of concern. The question of the timing of his alibi is an area of concern. The reliability of many of the I think there are many areas witnesses. that certainly would give rise for concern."

TAPE ENDS

BY MR. HODSON:

Q Okay. That's the only part that refers to it.

Just on the latter part, your comments about the alibi and the reliability of witnesses, on what basis were you making those comments?

A Well, that was made on the basis of additional information which had come to me, I think, at that stage from either Mr. Asper or Mr. Wolch.

Q And would that be in any way related to the

forensic work that you were doing or are you

1		talking forensic witnesses?
2	А	No, I'm not, I'm talking about other witnesses.
3	Q	And then as far as your comments let me just
4		find actually, for the record, we don't need to
5		bring it up, 001548 is a transcript of that, but
6		there's some parts that are marked out.
7		COMMISSIONER MacCALLUM: What's the number?
8		MR. HODSON: 001548.
9		COMMISSIONER MacCALLUM: Thank you.
10		BY MR. HODSON:
11	Q	And just on your comment that, "As a forensic
12		scientist, I think I would probably have said
13		there's not enough evidence to convict," can you
14		elaborate on that, please?
15	А	Well, I think that really is exactly what I've
16		been saying so far today, that in fact if we look
17		at the forensic evidence that was presented at the
18		trial and you look at the issues of integrity of
19		samples, continuity of evidence and interpretation
20		of those samples, they really would not allow, on
21		the basis of that forensic evidence, a presumption
22		of guilt.
23	Q	So am I correct what you are saying, based on the
24		forensic, based on that frozen semen, that that in
25		and of itself would
	l	

1	A	I think that on its own could not be used to
2		convict because in my view there were so many
3		issues relating to possible interpretation of the
4		sample and even the integrity of the sample that
5		it does not form a reasonable foundation for
6		evidence to convict.
7	Q	Yeah. And again, we talked about this this
8		morning, we don't know what caused the jury to
9		reach the conclusion they did. In the closing
10		addresses of the Crown and defence counsel that we
11		looked at this morning, and again I appreciate
12		that the jury may view it differently, but the
13		Crown position, at least in the closing address,
14		was this doesn't implicate and it doesn't
15		eliminate; is that correct?
16	A	I think that's correct, yes.
17	Q	And so are your comments, when you talk about, "As
18		a forensic scientist, I think I would probably
19		have said there's not enough evidence to convict,"
20		are you limiting your opinion to the forensic
21		evidence or are you taking everything else into
22		the non-forensic evidence?
23	A	No, I'm limiting myself in that comment to the
24		forensic evidence.
25	Q	Okay. If we can go ahead to 230046, please. This

is -- just put the video cover up on the screen -this is March 15th, 1990, so this would be about a year and a half -- I think your opinion was September 13th, 1988, and at this time the application before the minister was still pending, and there is a clip here on the video, I think it's at the 30, if you go to 34 minutes and 50 seconds.

VIDEO CLIP PLAYED

"REPORTER: ... says the physical evidence that helped convict him in 1970 should actually have cleared him. Sperm samples were found at the scene of the crime. Like blood, it can be tested for type, and it tested out as type A. David Milgaard's blood is type A, but he is one of the few people who doesn't leak that typing into other bodily fluids.

A forensic pathologist who has reviewed the evidence says that means the semen that helped convict David Milgaard wasn't his.

DR. FERRIS: My view would be that the defence did not exploit many of the

25

weaknesses in the Crown case. The jury were probably left with only the Crown case to consider. I think, if the defence had been more active in criticizing the forensic evidence, then the outcome might have perhaps been different.

"REPORTER: The man who is Milgaard's lawyer..."

TAPE ENDS

BY MR. HODSON:

- Again, if you had been aware of what was presented by Mr. Tallis to the jury at the conclusion of the case, would that have changed what you had to say in that?
- A Yes, it would. That really is not correct, what I said, because I think, in fact, Mr. Tallis did go through all of the problems associated with these elements of the Crown evidence.
- If we could go to 159867, this is May 12th, 1990, and it's an article by Dan Lett. And, again, the date is here, so this is about, I was going to say about almost 18 or 20 months after your report, and about 16 months after the application was filed with the minister, and this is just at the

1 time, I think, that the Milgaards indicated that 2 Peter Markesteyn was going to give a follow-up opinion. 3 And you say: "Ferris added he thought a 4 5 thorough analysis of his original report should have been conducted by Justice 6 Department officials months ago." 8 And the over to the next column: 9 "'That has to be done,' 10 Ferris said of Markesteyn's efforts. 'They need another opinion.' 11 12 However, Ferris said it is even 13 stranger that although the Justice 14 Department was given his report 16 15 months ago, none of the investigators 16 have ever contacted him. 17 'I don't think they really have 18 a reasonable excuse for not having at 19 least contacted me directly,' Ferris 20 said. 'I'm surprised at that.'" 21 And, again, would that be an accurate quote of 22 what you would have said at the time? 23 Α Umm, well I don't remember the words, but that may 24 well be correct. That's certainly how I felt 25 about it at the time.

1	Q	Right. And I think, at least from the documentary
2		record, it doesn't look as though you were
3		contacted until I think June of 1990, about a
4		month after this article; does that accord with
5		your recollection?
6	А	Yes, that's correct.
7	Q	And were you surprised by that?
8	А	I just assumed that the contact had been
9		stimulated by Mr. Asper.
10	Q	Were you were you waiting to hear from somebody
11		on your report?
12	А	Yes, I was.
13	Q	And who were you waiting to hear from?
14	А	I had no idea.
15	Q	Okay. But someone?
16	А	Someone.
17	Q	If we can then go to 048870. And this is now
18		just trying to see the date here June 8th,
19		1990, and this is I think when we first hear about
20		the dog urine theory, and:
21		"'The evidence doesn't
22		exclude it (as dog urine),' Markesteyn
23		said from Winnipeg. 'There are various
24		sources of yellow stains in a snowbank.'
25		David Asper, Milgaard's lawyer,

1		is more blunt about the report.
2		'It concludes that what Penkala
3		found in the snow could very well be dog
4		urine,' said Asper."
5		Did you become aware or involved in these
6		discussions or theories about the frozen semen
7		being dog urine?
8	А	Not until after Dr. Markesteyn had written this
9		opinion, and then I met him at a meeting, and we
10		discussed it.
11	Q	And do you recall whether you formed any
12		conclusions as to whether or not the frozen semen,
13		or frozen lump, was dog urine or wasn't?
14	А	No. The what I did, in essence said to Dr.
15		Markesteyn and I believe it was Dr. Merry, is I
16		felt that they were better qualified to give that
17		opinion than me and that I really had no
18		particular knowledge or expertise in this area.
19	Q	And would it be fair to say that, if the frozen
20		semen was dog urine, that it could not be used to
21		exonerate or prove Mr. Milgaard's innocence; is
22		that fair?
23	А	Yes. I mean, in essence, it was another reason
24		for questioning the continuity and integrity of
25		the sample.
	I	

1	Q	Right. It would mean it would have no value in
2		either linking or not linking someone to the
3		crime?
4	Α	Correct.
5	Q	If we can go to 002483, please. This is a memo of
6		June 12th, 1990 by Mr. Eugene Williams to his
7		file, and it talks about interviewing you on June
8		11th, 1990 at your Vancouver office; do you recall
9		being interviewed by Mr. Williams?
10	A	Yes, I do.
11	Q	And do you remember what did he tell you what
12		his purpose in interviewing you was?
13	Α	Umm, well he, he just simply said that he was here
14		as part of the investigative process for the
15		Justice Department.
16	Q	And what did you understand his role to be then?
17	Α	Well I, I'm not sure exactly what his role was,
18		but he, he questioned me fairly vigorously about
19		my opinion, and most of his questioning related to
20		the fact that it was now known that David was a
21		secretor and how that would have affected my
22		original opinion, and I was unable to, I think,
23		make him understand that my original opinion was
24		based on the evidence as it was apparently
25		understood at the time of the original trial, and
		1

1 he was not concerned with that, he wanted to know 2 how the new results would have affected my 3 opinion. 4 If I might, just by way of assistance, Dr. Ferris, 5 this -- what you may be referring to is a later discussion with Mr. Williams. Let me just tell 6 you -- and maybe in fairness I should go through the memo with you first. I think at this time the test for secretor had not been conducted, it was 10 February of 1992, and then I think there is a 1993 11 discussion or exchange, maybe a meeting, and I'll 12 take you to those documents where that happened. 13 So --14 I may be confused about it. Α 15 And so maybe what I will do, in fairness, 16 is just go through this memo and maybe that will 17 Now please keep in mind these are his assist you. 18 notes of the meeting with you, and I just want to 19 get your comments on what is said and what is 20 attributed to you. He says he interviewed you 21 about your September 13th report: 22 "Of particular interest was Dr. Ferris' 23 assertion on page 7 of his report that 24 the serological evidence presented at

the trial of David Edgar Milgaard could

1 be reasonably considered to exclude him 2 (David Milgaard) from being the 3 perpetrator of the murder of Gail Miller." 4 5 And then it also talks about comments upon Dr. Markesteyn's report. And then if you can scroll 6 down: 8 "Initially, our discussion centred on 9 identifying all the sources to which Dr. 10 Ferris referred, during the preparation of his opinion and the formation of the 11 12 conclusions contained therein. 13 Ferris confirmed that the only sources to which he referred were those noted on 14 15 pages 1, and 2, of his September 13, 16 1988 letter." 17 And then, if I can pause there, would that be 18 accurate? 19 I think so, yes. 20 I think that's what you told us today. 21 "He readily admitted that he had not 22 seen Dr. Emson's autopsy report, the 23 photographs of the murder scene, which 24 showed the position and the condition of 25 the body. Apparently, he had not read

1 the evidence of the Crown's key 2 witnesses, the prosecutor's address to 3 the jury and the judge's charge to the 4 jury." 5 And, again, would that be accurate? Yes. 6 Α And then, next paragraph: Q "Secondly, Dr. Ferris was invited to 8 9 comment upon Dr. Markesteyn's report 10 concerning the identity of the frozen 11 lump of yellow sperm found in the snow 12 four days after the body was discovered. 13 Dr. Ferris indicated that he was in 14 general agreement with the findings of 15 Dr. Markesteyn in that 'he could not 16 exclude the yellow frozen lumps which 17 contained sperm, as having originated 18 from a dog.' He noted that there was a 19 reasonable doubt that it was human 20 because of its colour and the fact that 21 dogs secrete semen in their urine." 22 And would that be accurate of what you said at 23 the time? 24 Yes, I think I was passing on information that I 25 had obtained from Peter Markesteyn.

		. ago 20077
1	Q	As a forensic pathologist and, again, I'm not
2		sure if this is your area but are you able to,
3		using scientific methods, determine whether a
4		sample of semen is human or dog?
5	А	Oh, that can certainly be done, but not by me.
6	Q	I see. And that's an area that you are not
7		familiar with; is that right?
8	А	I have some rudimentary familiarity with the
9		technology, but I wouldn't do it.
10	Q	I would ask you to read Dr. Merry's evidence
11		before the Inquiry, but I think that I'll leave it
12		there.
13		So as far as the distinguishing
14		between the two, was it your understanding that
15		tests could be conducted to exclude the sample as
16		being from canine origin?
17	А	Yes.
18	Q	And were you aware whether those tests were ever
19		done?
20	А	No.
21	Q	So, doctor, if I could just scroll down to the
22		actually, go to the next page, please. And I
23		don't mean to jump over parts of these, I just
24		want to go to the entire memo is in as
25		evidence, but I just want to ask you about parts
		4

1		of these. It says:
2		"Dr. Ferris noted that the serological
3		evidence should not have been admitted
4		because the continuity of the sample had
5		not been satisfactorily established. He
6		readily admitted that the semen was
7		probably contaminated as a result of
8		being piled up with the blood-stained
9		snow outdoors for four days."
10		Is that correct?
11	А	Yes.
12	Q	Then the next paragraph:
13		"He also acknowledged that the testing
14		performed on David Milgaard's saliva may
15		have been wrong. Therefore, the
16		non-secretor status attributed to David
17		Milgaard may be wrong."
18		Is that accurate as to what you would have said?
19	А	Umm, it may be. It sounds a bit strong for an
20		opinion on this subject from me, but I may have
21		said that, I simply I can't confirm because I
22		don't remember.
23	Q	Okay. And then the next page. Mr. Williams then
24		says:
25		"I then asked Dr. Ferris to take into

Α

account the contamination of the semen specimen, to which he alluded on page 4 of his report, and which is noted in Dr. Markesteyn's report, and indicate whether the evidence excluded David Milgaard. Dr. Ferris then stated that the serological evidence did not link David Milgaard to the offence, however, you could not say it (the serological evidence) excluded him."

And is that something that you would have said to Eugene Williams?

Umm, I may have said that, but I don't understand the context. I think that would relate to the reliability of the secretor status, so I don't know. I certainly -- if he was referring to the evidence of the secretor status and the testing as performed at the trial then I would not have said that, but if he was referring to the discussion that we obviously had about the reliability of secretor status then that's correct, I'm -- I would have to say that, if there are doubts about the secretor status, then you would have to say that the serology -- the serological testing did not exclude David.

		1 age 23320
1	Q	Okay.
2	A	But I go back to the point that my brief
3		originally was to look at the evidence that the
4		jury heard.
5	Q	Okay. So, just so that I understand this, if the
6		secretor status of David Milgaard is in doubt, in
7		other words that you can't assume that he is a
8		non-secretor, are you then saying "yes, I could
9		have or would have said, or I believed at the time
10		that you could not say that it, the serological
11		evidence, excluded him"; is that correct?
12	А	That's correct.
13	Q	Secondly, if you assume or have the opinion that
14		the frozen semen is contaminated and is not
15		reliable, would you also have said or thought at
16		the time that:
17		" you could not say it (the
18		serological evidence) excluded him."
19	А	I don't think I could say that. I think if the
20		serological, if the tests and the sample, if the
21		sample cannot be relied upon then the tests cannot
22		be relied upon, and if the tests can't be relied
23		upon, you can't use that as evidence against him.
24	Q	Can you use it as evidence to exclude him?
25	А	No.
		1

1	Q	If we can then go down to under the Conclusion:
2		"Very little, if any weight can be given
3		to a conclusion that blindly ignored the
4		obvious contamination of the samples
5		that were collected. The conclusion is
6		also wrong because an essential fact
7		upon which it is based, namely, David
8		Milgaard's status as a non-secretor, has
9		not been established."
10		And again, in fairness, the quotes above are just
11		from doctor from Dr. Emson. And, again, we
12		may have touched on this, the David Milgaard's
13		status as a non-secretor you told us was assumed
14		because you were giving a brief based on what was
15		before the jury at the trial; is that correct?
16	А	Correct.
17	Q	And would it be fair to say that in the comment
18		here that the contamination of the samples that
19		were collected, I think you've told us you did not
20		ignore that, in fact I think that was your first
21		opinion that they should not be relied upon; is
22		that correct?
23	Α	Correct, yes.
24	Q	Go to 185365. And this is a report or a letter
25		June 12th, 1990 from Patricia Alain to Mr.
		1

1		Williams, and I may have asked you this, so I will
2		be a bit more specific. She says to Mr. Williams:
3		"The morphological differences of human
4		spermatozoa and canine spermatozoa are
5		several. The experienced examiner would
6		not have any problems in distinguishing
7		between human and canine spermatozoa."
8		Are you able to tell us whether you agreed with
9		that or not?
10	А	I would have no experience of that.
11	Q	Okay. If we could go to 185372. This is Dr.
12		Markesteyn's report of June 4th, 1990. You are
13		familiar with the fact that he gave a report
14		reviewing some of the same things you did?
15	А	Yes.
16	Q	And in this report he says:
17		"I have been informed that the original
18		notes on which this evidence by Staff
19		Sgt. Paynter was based are no longer
20		available. Staff Sgt. Paynter informed
21		me that he does not remember (some
22		twenty years after the event) whether or
23		not he performed specific tests to
24		determine the human origin of these
25		specimens."
	II	

1		And this relates to the dog urine issue. Do you
2		have any recollection of contacting Staff
3		Sergeant Paynter to get his notes?
4	A	No, I have never contacted Staff Sergeant Paynter.
5	Q	Would those notes have been of assistance to you
6		in the opinions that you were providing?
7	A	Umm, they might have been. Umm, the difficulty is
8		that for someone like myself reviewing this work,
9		I would start probably with his conclusions, and I
10		would only look at the data on which he formed
11		those conclusions if I was going to question the
12		conclusions, and if you read all the evidence that
13		I have seen so far his conclusions that the
14		serological sample was type A and that the, that
15		David was a non-secretor, are really not
16		conclusions that I would necessarily want to
17		question, so I would have been more inclined to
18		simply accept his conclusions and not go back to
19		his notes.
20	Q	Okay. If we can go to 004374, please. And this
21		is a memorandum of August 28th, 1990 from Mr.
22		Williams, who you met with, to Mr. Bruce
23		MacFarlane, Deputy Attorney General, and it's
24		outlining various issues. If I could go to page
25		004376. And this is where Mr. Williams is

Page 23524 1 commenting on basically his review of the report and his meeting with you, and he refers to the 2 3 quote from your September 13th, 1988 report which 4 says: "On the basis of the evidence that I 5 have examined, I have no reasonable 6 doubt that serological evidence 8 presented at trial failed to link David 9 Milgaard with the offence and that in 10 fact, could be reasonably considered to 11 exclude him from being the perpetrator 12 of the murder." 13 14 15 Alain.

16

17

18

19

20

21

22

23

24

25

And then, if we can just scroll down to the next paragraph, it talks about them going to Pat

> "In her written report and in later conversations, she indicated that the likelihood of contamination, and the state of the scientific art was such that:

- the serological evidence did not link David Milgaard to the offence;
- the forensic evidence, in view of the circumstances under which the samples were collected, did not exclude

Meyer CompuCourt Reporting =

1		David Milgaard from being the
2		perpetrator of the murder."
3		And would you agree with those comments?
4	A	I don't think I would agree with number 2 if she
5		is talking about the forensic evidence that was
6		presented at the trial.
7	Q	I think what it refers to the if we can just
8		scroll back up a bit, she talks about the
9		likelihood of contamination, and then goes on to
10		say:
11		"I believe",
12		scroll down to paragraph 2, that:
13		" in view of the circumstances under
14		which the samples were collected",
15		and I'm assuming that refers to the issue of
16		contamination. And I think you told us earlier
17		that, in light of your opinion on contamination,
18		the sample was of no value one way or the other;
19		is that
20	A	Yes, but she is actually specifically saying here
21		that that sample, because of contamination, does
22		not exclude David Milgaard. What she should have
23		said is that it cannot be used to either include
24		him or exclude him.
25	Q	Fair enough.
	1	.

1	А	But it is quite wrong to say that a contaminated
2		sample doesn't exclude him unless there was
3		reasonable grounds to believe that the sample
4		should have included him.
5	Q	Well let me maybe just scroll back up, and I don't
6		want to get into semantics over other people's
7		words up further. I think up further,
8		please I think what the response is, is to the
9		fact that in your opinion and, again, it's only
10		one paragraph talked about that evidence being
11		used to exclude him, and then I think and maybe
12		let me paraphrase what I take from the memo is
13		saying "lookit, because of the contamination, it
14		shouldn't be relied upon to exclude him or to
15		implicate him", and I think that's what you have
16		told us; is that correct?
17	A	Yes, that's correct. But it's most important, and
18		I know that there it's just one or two words, but
19		those words can completely change the foundation
20		of the opinion and
21	Q	Go to the full page here, please.
22	A	and reading that number 2 conclusion I think
23		what she appears to be saying is that this
24		evidence does not exclude David Milgaard.
25	Q	Okay.
	li .	

		Page 23527 —————
1	A	And I that, that is not the correct
2		interpretation of that evidence.
3	Q	It
4	A	That evidence is either irrelevant to his guilt or
5		innocence, or it can be used to exclude him, but
6		it cannot be used in the context of not excluding
7		him.
8	Q	Well again, in light of your opinion about the
9		contamination, maybe I misunderstood what you
10		said. I think you told us the value of the sample
11		was nil, of no probative value?
12	A	Yes.
13	Q	And, in light of that, could that sample exclude
14		David Milgaard from being the perpetrator of the
15		murder?
16	A	Ah, I see what you are arguing.
17	Q	I'm asking.
18	A	Umm, yeah, or what you are saying. I think
19		what yes, I mean the, in essence if the sample
20		is contaminated it has no relevance and,
21		therefore, it should not have been used at all.
22	Q	To implicate or to exclude?
23	A	Implicate or exclude.
24	Q	Okay.
25	A	But I think to say that to take just one part
		Movey CompuCount Penarting

1		of it and say "it doesn't exclude him" negates the
2		fact that it doesn't implicate him either.
3	Q	Yeah. I think if you go up to paragraph 1
4		scroll up a bit it doesn't link him and it
5		doesn't exclude him. Now in fairness I think the
6		wording, you are saying you might have used
7		different language, and in fairness these are Mr.
8		Williams' Mr. Williams quoting what someone
9		else said to him, and I think I've heard your
10		position on that, so I can move on.
11	A	Yes. Well, if I may say so, if you are writing an
12		opinion in which you do not want David Milgaard to
13		be excluded from the investigation you will write
14		exactly this. You will write as your number 2
15		paragraph, which is your final paragraph, that
16		this evidence does not exclude him. I mean I'm
17		sorry to be critical, but I and my opinion is
18		perhaps coloured by my interviews with Mr.
19		Williams, but I got the feeling, in talking to
20		him, that his he saw his role to make sure that
21		the evidence did not exclude David Milgaard.
22	Q	Did he maybe we could just scroll up did he
23		challenge you in your conclusion no, scroll up
24		further, actually go back to the full page and
25		just call it out so we can get it all here did
	Ĩ	

1		he challenge your conclusion in this paragraph
2		that the frozen semen excluded Mr. Milgaard; was
3		that what he was taking issue with, that it really
4		didn't exclude him?
5	А	I think he was. But that, I mean he has correctly
6		reported what I said, but it's it's very
7		difficult, as you know, when you are talking to an
8		individual you can get perhaps entirely
9		unreasonable impressions of what way the
10		conversation is going, and at the end of it I felt
11		that my association with Mr. Williams was, shall
12		we say, unhappy.
13	Q	Okay. And would that be at this I think this
14		would be your first meeting with him, was this
15	A	I don't remember.
16	Q	Yeah. When going through this memorandum, does
17		this assist you in your recollection of the
18		meeting with him then?
19	A	No, it doesn't.
20	Q	But you met with him once and you have an
21		unfavourable a memory of the meeting with him
22		that you did not I think your words were
23		"unhappy"; is that
24	A	Yes.
25	Q	And, again, maybe you could, just so that we

	understand it, is there anything else in the
	exchange with Mr. Williams that made you unhappy?
A	I can't, I truly can't remember, I just the
	if I met him twice, and I apparently did
Q	Actually, I'm not sure you did, I think the later
	one might have been by correspondence.
A	Okay. Well the impression that I had from him was
	that the issue of secretor status was the key as
	far as he was concerned and he, I know he asked me
	on several occasions if it could be shown that
	David Milgaard was a secretor, would that have
	changed my opinion. And
Q	And what did you say to him?
A	Well I kept saying to him at the time of the trial
	the evidence was that he was a non-secretor, and I
	if you tell me that he did not know his
	secretor status until two years later I find that
	interesting, because that was certainly not the
	impression that I got from him.
Q	And again, we have not heard from Mr. Williams yet
	what this document suggests is that they doubted
	the validity of the original secretor status. I'm
	not aware that they'd actually done the test until
	1992, but certainly and I can show you another
	item.
	Q Q A

1		Just back on this issue versus
2		what you looked at the trial and at the time, were
3		you aware that Mr. Williams was looking at, at
4		this time, whether or not the Minister of Justice
5		should set aside Mr. Milgaard's conviction or give
6		him some relief at that time?
7	A	I probably was aware that that certainly was the
8		I mean the my meeting with Mr. Williams, I
9		assumed, was part of his response to the
10		applications by David Milgaard, by Mr. Wolch and
11		Mr. Asper.
12	Q	If he would have said to you "one of my tasks is
13		to try and determine, or gather information to
14		determine today whether or not David Milgaard is
15		innocent of this crime", would David Milgaard
16		being a secretor or not in June of 1990 be
17		relevant to that question?
18	A	He might it would have been relevant to that
19		question.
20	Q	Okay.
21	A	But, again, I would have had to go back and say
22		that that was not an issue for me in my original
23		opinion.
24	Q	Okay. If we can go to the next page, and we may
25		have covered some of this the last ten minutes,

1 but there's -- and, again, this is Mr. Williams 2 reporting about a discussion with you: 3 "The investigation of this area was completed with an interview of Dr. 4 5 Ferris. Dr. Ferris reiterated the position he had stated in his report. 6 However, when he was questioned about 8 the effect that contamination of the 9 sperm sample obtained from the snowbank, would have on his conclusion that the 10 forensic evidence could reasonably be 11 12 considered to have excluded Milgaard as 13 the culprit, Dr. Ferris stated that: 14 'Once you introduce contamination; once 15 the result may be wrong, you can't say 16 it excludes him or not.'" 17 And would that be an accurate recording of what 18 you would have said? 19 That's fair because it includes the qualifiers 20 that are necessary to allow for that interpretation of 'excludes him or not'. 21 22 And then: 23 "Dr. Ferris noted that his report of 24 September 13, 1988 was intended to be a 25 re-interpretation of the evidence before the Milgaard jury, and was not 'new evidence'. On the basis of his examination, he felt that the portions of the evidence he examined could afford reasonable doubt of Milgaard's guilt, or should have been used by the defence to exclude Milgaard as the culprit."

Would that be a fair recording of what you would have told Mr. Williams?

A Yes.

If we could go do 001529, please. This is the February 27th, 1991 letter from Minister Kim Campbell to Mr. Wolch and this is when Mr. Milgaard's first application was dismissed and he then subsequently re-applied and got a hearing before the Supreme Court, and in this letter she deals with some of the forensic evidence that was put forward. If we could go to 001534, please, I just want to go through some of the paragraphs and get your response. She says:

"At trial, the RCMP forensic analyst testified that he found "A" antigens in the sample taken from one of the lumps of frozen snow, and concluded that the sample was probably from a blood group

1		"A" person that was a secretor, or from
2		a blood group "AB" person. The analyst
3		also testified that Milgaard had blood
4		type "A", and the test he performed on a
5		saliva sample from Milgaard indicated
6		that Milgaard was a non-secretor. There
7		was, therefore, some evidence from which
8		the jury could have inferred, if they
9		felt it reasonable, that the seminal
10		fluid did not originate from Milgaard."
11		And would you agree with that statement?
12	A	Yes, I probably would. I'm not sure if Mr. Tallis
13		would agree with that statement because I think it
14		was a lot more than "some" evidence.
15	Q	Fair enough. So you might say it's a bit stronger
16		than "some" evidence that the jury could have
17		inferred?
18	A	Yes.
19	Q	And go down to the bottom, it talks about the
20		opinion that you provided, and I won't go through
21		it again, and then it starts here:
22		"Assuming that Milgaard is a
23		"non-secretor", he concluded that
24		Milgaard could not have provided the
25		seminal fluid. He also assumed that the

1 donor of that seminal fluid was Gail 2 Miller's assailant." 3 And then go to the next page, and then makes a 4 reference here to Dr. Markesteyn who says: 5 "Dr. Markesteyn added that, "(t)he determination of the non-secretor status 6 of Mr. Milgaard, although perhaps 8 acceptable at the time, would now no 9 longer serve as proof of his 10 non-secretor status." 11 Would you have been aware of that opinion from 12 Dr. Markesteyn at the time? 13 Α No, I was not aware of that. 14 And then if we can just go down to the bottom 15 paragraph: 16 "It is important to remember that it is 17 common ground, both on the basis of the evidence tendered at trial as well as 18 19 the information from current experts, 20 that the probability of contamination of 21 the seminal fluid in this case, which 22 was found in the snow after several days 23 of activity at the scene, was such that 24 it was difficult to draw any inferences

from the evidence at all. Dr. Ferris

Д

was aware of this, and on page 4 of his report he expressed surprise that the samples were admitted into evidence, given the circumstances and timing of their discovery. When interviewed, he agreed that once contamination of the sample was taken into account, the forensic evidence neither inculpated nor exculpated David Milgaard."

And would you agree with that comment, sir?

Yes. I suppose technically that's correct,

although, as you know, my opinion is that it

should not have been used at all.

Right, okay. And then down at the bottom, I am not sure the minister had the benefit of

Mr. Tallis' closing address to the jury when this letter was written, it says:

"The trial judge did not comment on the forensic evidence in his charge to the jury. Despite this, counsel appearing for the accused did not ask the judge to provide direction to the jury through a recharge. That is not surprising, because the evidence, as tendered, favoured Milgaard's position."

= Meyer CompuCourt Reporting = urt Reporters serving P.A., Regina

1		And just your comment on that, whether at trial
2		would you agree that that evidence on the frozen
3		semen favoured David Milgaard's position?
4	А	Yes, it does.
5	Q	And then the next page, it says:
6		"In the final analysis, the forensic
7		evidence presented at trial proved
8		nothing. With the benefit of hindsight,
9		it may have been preferable had the
10		evidence simply not been tendered.
11		Nevertheless, the case against Milgaard
12		was a strong one. The suggestion that
13		the forensic evidence exonerates
14		Milgaard misstates the value of that
15		evidence. The forensic evidence
16		tendered at trial, when elevated to its
17		highest probative value, is neutral,
18		establishing neither guilt nor
19		innocence. The recent opinions do not
20		establish that the evidence should now
21		be viewed any differently."
22		Now, if you can ignore this sentence about the
23		case against Milgaard was a strong one, do you
24		agree with the balance of that paragraph?
25	А	No, I don't, because I believe that the forensic

1 evidence that was tendered at the trial elevated 2 to its highest probative value clearly, at the 3 least, indicates Milgaard's innocence and in fact I believe could be reasonably interpreted as 4 5 making him not guilty of the offence. It's again, it's part of the problem of all of these review 6 systems. Remember, the trial is to determine 8 guilt, not innocence. If you were a Crown witness back at the trial, 10 giving advice to the Crown and said how do you use this sample to establish guilt or innocence, what 11 12 would you have told the Crown? 13 Α Well, I would have -- well, I mean, to me the 14 procedures are straightforward. The Crown meets 15 with the expert witnesses prior to the trial, the 16 expert witnesses give their opinions on the 17 strength of their evidence and I have no doubt that the forensic science evidence would have 18 19 questioned the reliability of the sample.

20

21

22

23

24

25

existing system for the Crown to have presented the issues of the integrity of this sample and its validity as evidence in the form of voir dire where the judge could have ruled on it. that, quite honestly I believe that if the judge

I would

have thought it was perfectly open within the

1		had been properly informed on the question of
2		contamination and the unreliability of this sample
3		and the difficulty of interpretation of the blood
4		tests, he probably would have said this should not
5		go to the jury.
6	Q	And so in that respect, if the defence wishes to
7		use it as exculpatory from the other side, the
8		counter argument to that would be, well, no, you
9		can't rely on it for anything?
10	А	Clearly, and that's always the risk in putting
11		together a case for either the Crown or for the
12		defence, but I think bad evidence serves nobody.
13	Q	And if we can go to 002623, and this is around the
14		time of the Supreme Court of Canada reference, and
15		there's a couple of letters here that you maybe
16		haven't seen, this one is from Murray Brown who is
17		with Saskatchewan Justice to the Federal Justice
18		lawyers about who were going to be witnesses at
19		the reference, and your name is listed as a
20		witness I believe that Mr. Wolch may wish to have
21		called. What do you remember talking to Mr.
22		Wolch or Mr. Asper about giving evidence at the
23		Supreme Court in the reference case?
24	A	I do. I don't have very good recollection of it,
25		but what I remember, I think I was informed that
	1	

Q

my name was on the witness list along with Peter Markesteyn, but I believe that the decision was made that the serological evidence would not become part of the material which was ultimately presented to the Supreme Court.

Okay. If we could go to 009878, and this is Mr. Wolch's -- if we can actually go to page 4 of that. This is Mr. Wolch's letter to Chief Justice Lamer about witnesses, and then if we can go to the next page, it talks here about:

"We would appreciate further information from Justice as to time frames, as well as some views as to how this impacts on the calling of Drs. Ferris and

Markesteyn and perhaps Dr. Emsen ... "

And it appears from this letter that you were on the list at this time. If we could call up 230797 and go to page 799, this is -- and you may not have seen this, this is a February 3rd, 1992 report from the forensic lab that, where David Milgaard was determined to be a secretor, and I believe that this was the first secretor test done, at least based on the documents we have in our database and the evidence we've heard to date, this is when the test was done on David

1 Milgaard's secretor status, that it was in the 2 midst of the Supreme Court reference. 3 recall whether this test and the results, the 4 fact that David Milgaard was now -- well, he was 5 always a secretor, but the test now showed he was a secretor, did that impact on your testifying at 6 the Supreme Court reference? Well, obviously it was not discussed with me, but 8 9 I'm quite sure it did impact on the presentation 10 of that evidence. You are sure it did? 11 Q 12 А I would imagine so. I mean, it almost makes the 13 conclusions that Dr. Markesteyn and myself had 14 reached no longer relevant given the strength of 15 the other arguments that were going to be 16 available. 17 If we can then go to 041911, this is a Okay. 0 18 letter of May 3, 1993 from Inspector Sawatsky of 19 the RCMP, and I'm sorry, earlier I indicated that 20 there was some correspondence you had with Eugene 21 Williams in '92 about getting copies of your file 22 notes and I think that's when you sent him the 23 file notes, and I don't have any other documents 24 that suggest a further meeting with Mr. Williams. 25 Do you remember more than one meeting with Eugene

1		Williams?
2	А	No, I don't, but I actually I believe that I
3		remember that Mr. Sawatsky was the first person to
4		tell me that David Milgaard was a secretor.
5	Q	Okay.
6	A	I
7	Q	In fact, let me just go through
8	A	I think that is correct, but I don't know when
9		that happened.
10	Q	Did that surprise you?
11	A	That he was a secretor?
12	Q	Yes.
13	A	Not really, because, I mean, I was well aware of
14		the fact that the secretor tests from saliva were,
15		not to say unreliable, but not always correct.
16	Q	Okay. Here Mr. Sawatsky, or Inspector Sawatsky
17		was doing some work for the RCMP, he attaches
18		copies of reports that may assist you. If we can
19		go to the next page, to 041913, and I won't go
20		through all, these are some internal reports about
21		testing, and then go to the next page where it
22		says both David Milgaard and Larry Fisher are
23		secretors, and I believe this would be the
24		information that he would have provided to you; is
25		that correct?

	——————————————————————————————————————
A	Yes, that's correct, but I actually think he told
	me verbally
Q	On the phone?
	maybe by phone.
	Okay. Would it have been around I don't think
~	he was involved in this matter until late '92,
	early '93, so would it have been around the time
	that he also sent you this letter?
z	I presume so, but I'm afraid I have no record I
A	may actually have the letters in my file, but
Q	Actually, 041916, this is your letter back June
	4th, '93, and you say:
	"As you know my original opinion was
	simply addressing issues raised at the
	time of the trial and I expressed an
	opinion that based on the evidence
	submitted at the trial which included an
	interpretation by the Crown that David
	Milgaard was a non-secretor that this
	evidence could be reasonably considered
	to have excluded David Milgaard.
	As you may know one of the
	arguments advanced by the Crown was that
	not only was David Milgaard a
	non-secretor but the apparent secretor
	A Q A Q

1 status of the seminal sample was based 2 on contamination by blood although no 3 evidence of Milgaard suffering from any 4 injury likely to contaminate his semen 5 was ever adduced." Then scroll down: 6 "I also spoke to Mr. Wolch, lawyer for 8 David Milgaard, indicating to him that 9 the methods used to determine secretor 10 status at the time of the original 11 investigation would not necessarily 12 exclude David Milgaard from being a 13 secretor and it is therefore no 14 particular surprise for me to learn that 15 David Milgaard is in fact a secretor." 16 And again this is your letter of June 4, 1993, 17 and is that accurate? 18 Α I presume so. My recollection of all of this is 19 not great, but, I mean, I'm assuming that this was 20 correct. 21 And it says here that you spoke to Mr. Wolch Q 22 indicating to him that the methods used to 23 determine secretor status at the time of the 24 original investigation would not necessarily

exclude David Milgaard from being a secretor.

25

1		When would you have had that discussion with Mr.
2		Wolch?
3	A	I don't know, but it certainly would not have been
4		at the time of the original opinion and must have
5		been subsequent to that.
6	Q	And why do you say that?
7	А	Because I think at the time of the original
8		opinion I was not fully aware of the unreliability
9		of saliva testing for secretor status.
10	Q	And so and when did you become aware of that?
11	A	I don't know, I honestly don't know, but remember
12		the reports from Pat Alain had been in before
13		that.
14	Q	If I might just assist, from what we have seen
15		from some other documents in evidence, in June of
16		1990 I believe Dr. Merry and as well possibly Dr.
17		Markesteyn in reports had indicated that the
18		secretor test may not have been reliable. Is it
19		possible that it would have been around that time
20		frame that you would have had those discussions?
21	А	Well, that's correct, it might be. At that time,
22		you know, I had attended a number of conferences
23		with Dr. Markesteyn and clearly we discussed this
24		case and I don't know at what stage I became aware
25		of that.

1	Q	Okay. If we can then go to 061498 and this, we're
2		now into I guess 1994 and the Justice Department
3		and/or the RCMP were looking at doing some further
4		DNA testing and there's a call from a Corporal
5		Wozney about the, it says you advised him:
6		"The portion of material extracted from
7		panties belonging to Gail Miller was
8		tested for D.N.A. results. There was no
9		success in this process and the entire
10		portion of exhibit was consumed during
11		the examination. Dr. Ferris states he
12		has nothing to report and is not in
13		possession of any exhibit which can be
14		returned."
15		Is that accurate?
16	A	Yes, it is. Corporal Wozney was at that time
17		associated with one of the major crime units with
18		the RCMP and I think she was responsible for, I
19		think she came to the lab to see exactly what was
20		available.
21	Q	And so when you did the testing on the cloth
22		removed from the panties, was that cloth destroyed
23		in the testing process?
24	A	It would have been destroyed after the testing
25		process.
		1

		1 age 20041
1	Q	Or after the testing process?
2	A	Yes.
3	Q	If we can then go ahead to 314267, please, and I
4		will not go through this, this is the transcript
5		of your evidence. You testified at both the
6		preliminary hearing and trial of Larry Fisher; is
7		that correct?
8	A	Yes, I did.
9	Q	And this preliminary hearing transcript, I'm not
10		sure if you've read it recently, but I believe you
11		would have read this before you testified at the
12		trial; is that fair?
13	A	That's correct, and I also read it before I came
14		here.
15	Q	And are you able to tell us that what you
16		testified to in the preliminary hearing and indeed
17		at the trial remains accurate?
18	A	Yes. In fact, it documents the handling of each
19		of the exhibits and so on much better than my
20		present recollection.
21	Q	Okay. And if we could go to 314131, I just want
22		to finish up some this is the trial transcript,
23		and if we can go to 314143. Actually, go to
24		314147. I think in your evidence there you also
25		said that you did not recall examining the dress.
		Meyer CompuCourt Penorting

1 Here at 314147: 2 "And do you have any personal 3 recollection of whether or not the dress 4 was examined? 5 Α No." And you talked about the extraction of DNA being 6 done by the scientists, and then you say: "We did extract material which we felt 8 9 was DNA, but we were not able to do any 10 characterization of it that would even 11 confirm that it was human or animal or 12 whatever, so we couldn't identify it. 13 We felt that we had DNA, but that was 14 all." 15 And would that be an accurate statement? 16 Yes, and in fact I think the radiographs that we А 17 saw earlier show exactly what we saw and what the 18 problems were. 19 If we could then go to 317002, please, this is an 20 article in The Leader Post, October 22nd, 1999, I 21 think this was just around the time you were 22 testifying at trial, and it appears that you were 23 interviewed after your evidence, and it says here: 24 "Outside court, Ferris said his lab, 25 which shut down in 1990, was a research

you would have told them?

facility and was never intended as a "full service" laboratory, where tests are provided for clients.

"The only reason we did the

pressure from Joyce Milgaard," he said."

And would that be an accurate recording of what

tests at all was because of immense

I suspect that's probably a little unfair to Mrs. Milgaard. As I said this morning, we were primarily a research facility. It was our hope that we would eventually become a full service laboratory and although I don't want to underemphasize the pressure that Mrs. Milgaard placed upon me, it really was I think justified pressure in light of the fact that we were at that stage, I have to say, almost her only hope as far as DNA was concerned. Maybe I should have been, I should have said to her, you know, the chances are not good, I probably did, but I may not have said it strongly enough, but on the other hand, as a result of my introduction to her and those tests which failed, I think the review of the subsequent evidence probably made the contact worthwhile.

MR. HODSON: Okay. Thank you, Dr. Ferris,

1		those are my questions. We'll maybe break here
2		and I can canvass with counsel.
3		COMMISSIONER MacCALLUM: Thanks.
4		(Adjourned at 2:52 p.m.)
5		(Reconvened at 3:09 p.m.)
6		BY MR. HODSON:
7	Q	Just sorry, before Mr. Gibson starts, there's
8		just one document that I should have put to you
9		regarding I think I told you I didn't think
10		there was a second meeting with Eugene Williams.
11		If we go to 277709 and go to the next this is
12		Mr. Williams sending back. If you can go to the
13		next page, please, where they talk about meeting
14		on Tuesday, May 19th, so it does look like there
15		may have been a 1992 meeting?
16	А	Yes.
17	Q	At your offices?
18	А	Yes. That may have been in the laboratory, I
19		don't know. I can't remember.
20	Q	And this would be after the Supreme Court
21		reference and I think after Mr. Milgaard's
22		conviction was set aside and he was released from
23		prison and this may well have had to do with
24		further DNA or forensic work. Do you have any
25		recollection of that?
	ĺ	▲

I don't. I know that, from the context of the letter, it looks as if he was principally interested in talking to Mr. Kelly McNeill.

MR. HODSON: Okay, thank you. I just wanted to bring that to your attention because I think I may had led you to believe that there was only one meeting.

BY MR. GIBSON:

Dr. Ferris, for the record, my name is Bruce

Gibson, we had a chance to say hello at the break.

I'll be asking you a few questions in relation to

some of the evidence that you've gone over with

Mr. Hodson and I'm going to try not to belabour

that very much.

First off, I would like to thank you for the assistance that you rendered to the RCMP in the 1990s in clarifying a lot of the evidence in the scientific data when you were contacted by Inspector Sawatsky.

One of the areas I do want to touch on is the evidence with respect to the retrieval of the sample from the snowbank, and I know we've been over that evidence a good deal today already, and again I don't want to belabour that, but my understanding is that your evidence

1		was that it was questionable as to whether that
2		should have been used at the trial and your
3		concern again was with respect to the
4		contamination and continuity of that sample; is
5		that correct?
6	А	Correct.
7	Q	And I believe that your evidence was that if the
8		forensic scientist had gone out to the scene, he
9		likely would have drawn the conclusion that that
10		sample would not be the best sample to use because
11		of the observations one could make with respect to
12		the trampling of the snow and the porosity of the
13		snow and the blood that had seeped into that?
14	А	Yes. I mean, clearly if the sample had been
15		collected at the very initial stages of the scene
16		examination, then its significance might have been
17		much greater.
18	Q	And were you aware as to whether Staff Sergeant
19		Paynter actually attended the scene? There's no
20		evidence that he did.
21	A	No, I'm not aware of that.
22	Q	Okay. And obviously that would have been
23		something that would have been beneficial if he
24		would have had that opportunity, to attend the
25		scene and then make that determination on his own?

		——————————————————————————————————————
1	А	Yes.
2	Q	Now, as far as what sample may have been best to
3		use, I think you agreed that the vaginal aspirate
4		would have been a far better sample to be doing
5		the type of tests that Staff Sergeant Paynter
6		eventually did; is that correct?
7	А	Yes, and clearly it would have been a better
8		sample, but it would have been better still to
9		have access to that and any other sample,
10		including the snow sample, and to have at least a
11		comparative examination of the samples.
12	Q	And I suppose you may agree with this comment in
13		that a scientist doesn't always necessarily get to
14		choose what sample he gets to do his analysis on?
15	А	Oh, no, that's correct, but in his report he will
16		often qualify his results based on what he
17		understands to be the integrity of the sample.
18	Q	Okay. And we do know that the evidence that went
19		in at trial, it was very clear in that evidence
20		that that sample was found a number of days later,
21		Lieutenant Penkala who found the sample testified
22		at the trial, and so that was certainly not a
23		secret at the trial as to the continuity and the
24		location of that exhibit?
25	A	That's correct.

1	Q	Now, I'm going to try to speed over this area
2		rather rapidly because we have gone through this
3		evidence a fair bit, even before your attendance
4		here today and yesterday, Dr. Ferris. Staff
5		Sergeant Paynter's evidence in the trial in 1969
6		was that he used a hemostix test which he gave
7		evidence was a presumptive test that there could
8		be blood in the sample, and would you agree with
9		that?
10	A	Yes.
11	Q	And Staff Sergeant Paynter at this Inquiry gave
12		evidence that that was only a presumptive test and
13		that he would have wanted to have done a
14		hemochromogen test to confirm that blood was
15		present in that sample, but there wasn't enough of
16		the sample there for him to do that confirmation
17		test, and does that make sense to you, Doctor?
18	A	Yes, it does, and in fact he would probably have
19		explained that even the hemochromogen test does
20		not confirm that it is human.
21	Q	Yes. And the evidence at trial was slightly
22		different, he never referenced the hemochromogen
23		test, but and again I don't think that's
24		necessary to put that up, but for the assistance
25		of you, Mr. Commissioner, at 041925, at 945 Staff

Sergeant Paynter indicated that there was insufficient colouring in the sample to confirm positively if the blood was there, and you will agree that that was the evidence at trial? think you actually addressed your mind to that portion earlier with Mr. Hodson, you did go through that evidence. Α Yes. And there was I quess a rather stern warning from the judge that there was no evidence that blood had been identified in the frozen sample and there was an exchange back and forth with Mr. Tallis and Mr. Caldwell and Chief Justice Bence on that? Α In fact, I think the judge actually said there was no evidence whatsoever of blood. And I guess it was on that basis, because the Q judge ruled that there was no evidence of blood, that the identification was that the sample was from an A blood type secretor and that Mr. Milgaard was identified, at least at the trial stage, as being an A blood type non-secretor, that you were able to draw the conclusion that in all likelihood the evidence at trial went more to exculpating Mr. Milgaard than inculpating him? The forensic evidence, that's correct. Α

1	Q	Yeah, that's what I mean, yes. Now another area
2		that was covered by Mr. Hodson was the address to
3		the jury by Mr. Caldwell, and again I'm not going
4		to go through that, but at the end of the day I
5		think you agreed that Mr. Caldwell's view that
6		was that it, I guess that evidence didn't identify
7		Mr. Milgaard as the culprit and did not eliminate
8		him as the culprit either, it was really I guess a
9		wash if anything?
10	A	Yes.
11	Q	And it was your view that that was a fair comment?
12	Α	Umm
13	Q	At least that aspect of it?
14	А	yes, underwritten by the fact that I felt that
15		it would have been more appropriate to say that
16		you could not draw any conclusions from that
17		sample.
18	Q	Okay.
19	А	I know the two conclusions are either it includes
20		him or it excludes him but, in fact, it's slightly
21		different to say that you could draw no
22		conclusions from that.
23		Remember, I presume Mr.
24		Caldwell's task was to show evidence that linked
25		David Milgaard with the murder, and by saying that

1		you could neither include nor exclude him made
2		that piece of evidence neutral when in fact the
3		piece of evidence meant nothing, which is slightly
4		different from being neutral.
5	Q	Now you also went through Mr. Tallis' address to
6		the jury with Mr. Hodson, and I think you agreed
7		with his comments that the evidence was
8		exculpatory of Mr. Milgaard, that was certainly in
9		Mr. Tallis' submission to the jury; correct?
10	A	Yes.
11	Q	And I suppose you would agree with me, and I
12		believe you did make the comment, that it was
13		really fact-specific and it was up to the
14		individual counsel in this case to decide, I
15		suppose, whether that evidence was beneficial to
16		his client or harmful to his client. And
17		certainly, from what we have seen, it was
18		obviously a determination made by Mr. Tallis that
19		his best argument and, again, he'll get an
20		opportunity to give that evidence that that was
21		beneficial to his client because, clearly, he
22		never called any expert evidence on his own;
23		correct?
24	A	Correct.
25	Q	And I suppose it would be fair, then, that your

1		view of the evidence in reviewing it in 1969, in
2		that sense, would have been I suppose similar to
3		Mr. Tallis' in that you took the view that the
4		evidence as presented at trial was exculpatory of
5		David Milgaard?
6	А	That's correct.
7	Q	Just a couple of other points that I want to touch
8		on with you, Dr. Ferris. Now, back in 1969, would
9		you agree that there would have been no way to
10		differentiate between Larry Fisher and David
11		Milgaard if both had been identified as A blood
12		type secretors, there was no additional testing
13		that could have been done to their body fluids to
14		test those body fluids to make a differentiation
15		between those two individuals?
16	A	Not on those serological typing tests. There were
17		some other tests becoming available but the
18		difficulty, in those days, was the reliability of
19		those tests in stains.
20	Q	Yes. And now of course, if we are able to
21		identify a stain, it would be appropriate to do
22		DNA testing and, thank goodness, hopefully people
23		won't have to have these lengthy discussions about
24		secretor or non-secretor issues?
25	A	Well most of the serological tests have been
		1

1		abolished in laboratories.
2	Q	Now if we can go back again to 1969, and we can
3		look at the testing that was undergone by Staff
4		Sergeant Paynter, and he took the sample and ran
5		tests on it and identified the sample as coming
6		from an A blood type secretor, and if he had found
7		further samples, would you agree with me, doctor,
8		that finding further samples wouldn't have given
9		him any other opportunity to run any more tests on
10		anything? If he had found further seminal fluid,
11		there's not really much more that one could do
12		once you've identified the blood type and whether
13		they are a secretor or a non-secretor?
14	A	Yes. I've I don't think it's quite correct to
15		say that Mr. Paynter's conclusion was that this
16		sample of semen came from an A-type secretor. I
17		think what he said was that he typed the semen as
18		type A and, therefore, it was either from a type A
19		secretor or it was contaminated by blood from an A
20		type A secretor or from other blood.
21	Q	So he that was
22	A	He may not have actually said it quite like that
23		but I think his evidence, if you read it, allows
24		for that interpretation.
25	Q	And that's as definite as he could get in the
		1

1		sense that what he drew a conclusion from, that
2		sample, was that he had found an A blood type
3		sample, and then the issue was if there is no
4		blood in it then that may be from a secretor, if
5		there is blood in it that still may be from a
6		secretor; is that fair?
7	A	That's correct. And that's that was the issue,
8		then, that became available to Crown.
9	Q	Okay. One other area I just want to touch on
10		briefly with you, Dr. Ferris, is you gave evidence
11		at the Larry Fisher trial with respect to your
12		review of the clothing items that were forwarded
13		on to you in 1988, and I believe your recollection
14		was that you likely examined the uniform and it
15		may have been put under a UV light; is that
16	А	Yes. I can't remember. I mean we should have
17		examined all of the items, I mean that would
18	Q	It would make sense that you would do that?
19	А	That would be the normal, but I have no actual
20		memory of that garment. I have a very good memory
21		of the bra and the panties because I took the
22		samples from those, and I have some recollection
23		of the other samples, but for some reason I can't
24		remember the dress.
25	Q	And if we could just put up from that transcript, $lack$

1 I think it's doc. number 314131, and if we could 2 put up 173 of that document, please. If I could just call up that bottom portion, this is under 3 examination by Mr. Beresh on behalf of Larry 4 5 Fisher at that trial, and it says: With respect, I don't want to debate 6 "0 this all morning, your notes don't tell 8 us whether or not the other items were 9 examined? 10 Α I can tell you that they were examined, but I can tell you that they 11 12 were not tested for DNA, and fabric 13 was not cut out of them. 14 They were tested using UV light, O 15 correct? 16 I can't even tell you that, but I Α 17 think they were." 18 And if we go to the next page, just to finish 19 that off: 20 And certainly Mr. McNeill didn't 21 report to you; using UV light he found 22 an area on cloth which suggested bodily 23 fluid? 24 Well, I was the one that used the UV 25 light, not him."

1		And, again, your notes don't confirm that there
2		was any stain identified, but does that help with
3		your recollection that it was likely that he
4		reviewed that item of clothing with sight and UV
5		light to try and identify if there was any
6		staining?
7	А	Well, all I can say is that it is likely that I
8		did, but I don't recall it.
9	Q	All right. And, again, it's likely well, I
10		guess it's obvious that you weren't able to
11		identify a stain that was later identified by Dr.
12		Barber; correct?
13	A	Correct.
14	Q	Okay. Thank you, doctor.
15	ву	MR. LORAN:
16	Q	Good afternoon, Mr. Ferris, I'm Pat Loran and I'm
17		here with the Saskatoon Police Service.
18		I just wanted to ask you about
19		something I heard near the end of your evidence.
20		Did I correctly hear you say that the sample of
21		cloth from the panties was destroyed after you had
22		completed your analysis in 1988?
23	A	<pre>I that's my recollection.</pre>
24	Q	Okay. Now you've indicated that surprising
25		advances in the scientific understanding and

1		technology associated with DNA testing have
2		occurred in the last 10 or 15 years, I think that
3		was your evidence, wasn't it?
4	A	Yes.
5	Q	If that sample were still around is it possible
6		that current techniques would permit the
7		extraction of a sample with some probative value
8		regarding DNA?
9	A	Possibly, unless our manipulation of the sample
10		and our attempts to extract DNA had in fact
11		removed all of the DNA that was there.
12	Q	Okay. Umm, are you able to say, at this time,
13		whether a technology which might not yet be
14		developed will come along which would have allowed
15		the extraction of a sample with probative value?
16	Α	I'm I simply can't look into the future.
17	Q	When you destroyed the sample would it be fair to
18		say that you didn't consider yourself to be
19		destroying valuable evidence because the available
20		knowledge at the time led you to believe that the
21		sample had no probative value?
22	A	Umm, it I was of I was under the impression,
23		at that time, that we had done all that could be
24		done to that particular sample.
25	Q	And you thought it would be of no further value.

1		That was because of the scientific knowledge or
2		technology at the time; would that be correct?
3	А	That was correct in part, but I think we also
4		might have modified the sample in such a way that
5		further testing might have been unreliable, and,
6		remember, there were still other parts of the
7		fabric and garments would still be available for
8		further testing.
9	Q	Thank you. Those are all the questions I have.
10	BY I	MR. PRINGLE:
11	Q	Dr. Ferris, you know me, I'm Alex Pringle, I
12		represent Justice Tallis.
13		Just a few questions for you,
14		Dr. Ferris. One of the, I'm sure you've run into
15		this as an expert witness who testifies in our
16		courts often, but one of the principles of
17		Canadian law is that the, you know, the expert's
18		opinion is it has to be supported by proof of
19		underlying material facts; is that correct?
20	А	Yes.
21	Q	And in this case the, any opinion that has been
22		provided in this case to reach any conclusion that
23		there was a match between the frozen semen and
24		David Milgaard's, any opinion, that has to be

based upon underlying evidence that is proven;

25

		——————————————————————————————————————
1		correct?
2	Α	Yes.
3	Q	Okay. And you've already pointed you've
4		already observed the address by Justice Tallis
5		where he is basically saying that, in argument,
6		and very alertly pointing out to the jury in final
7		argument that there is no evidence that David's
8		blood was in his semen at the material time?
9	А	Correct.
10	Q	And the judge also said that there was no evidence
11		that, you know, that his blood would be in his
12		semen at the material time, and Crown's theory
13		that, you know, he was suffering from some illness
14		or injury that would cause blood to seep into his
15		semen, there was no evidence to that effect?
16	А	Correct.
17	Q	And to think otherwise would be what we could say,
18		in law, "speculation"?
19	А	Correct.
20	Q	It would just be speculative to reach such a
21		conclusion?
22	А	Correct.
23	Q	There was no evidentiary basis in this trial for
24		that opinion, for the opinion being based upon
25		that type of evidence?

		——————————————————————————————————————
1	A	Correct.
2	Q	And that's why you're saying that in the final
3		analysis, when you look at the evidence that was
4		called at this trial, the blood evidence was
5		exculpatory in favour of David Milgaard?
6	А	Effectively, yes.
7	Q	And so that really, when you look at the final
8		result here, the final, you know, the final
9		conclusion that can be drawn from the evidence is
10		that there was no evidence that the A antigens in
11		the frozen lump came from any other source than an
12		A secretor?
13	A	That's correct.
14	Q	And it would be speculation to conclude otherwise?
15	A	That's correct.
16	Q	And your position on analysing the evidence, then,
17		that David Milgaard could not be the source of
18		that frozen semen?
19	А	Correct.
20	Q	And that was what Justice Tallis was arguing in
21		at the time of the trial in his closing address?
22	А	That's correct.
23	Q	Now if a defence lawyer is going to get that
24		result in the evidence would you not think, from a
25		tactical point of view and I just, I know you
	İ	

1 are a scientist and a doctor, and the thinking of 2 doctors is different when it comes to the 3 adversarial system because doctors are more used 4 to a venue where you are getting at the truth in a 5 scientific inquiry -- but in a trial process, and you are familiar enough with trials, don't you 6 think that in this trial, considering what 8 ultimately occurred, it was a wise decision by Mr. 9 Tallis not to seek a voir dire, to allow the 10 evidence in, and get that ultimate result with respect to the evidence? 11 12 А I think that may well be correct, but I have one 13 concern. And, I mean, I'm not a trial lawyer, 14 although --15 Right. Q 16 Α -- I mean for 40 years I have been participating 17 in trials. If you stand back and look at this 18 case from the jury point of view you have evidence 19 being presented by the Crown which, much of which 20 is really bad news for David Milgaard; and then 21 you have serological evidence which is being 22 presented by the Crown, and although it does not

again and again and again that in fact it's

23

24

25

neutral.

implicate David, the evidence from the Crown is

1 Now Mr. Tallis correctly argued 2 that that was not correct, in fact it was more 3 than neutral, it was -- actually potentially excluded him. 4 5 Q Correct. And the judge also argued that, and pointed out on 6 Α several occasions, that the jury could reasonably 8 interpret this evidence as excluding David 9 Milgaard, or words to that effect. 10 Q Right. And I think what I would have done is it would 11 Α 12 have been, I think, a requirement by the defence 13 to counter the Crown case by calling their own 14 expert because they would be saying to the jury 15 "this is very important evidence and our expert is 16 telling you this is the correct way to interpret 17 this evidence. It may be the same interpretation 18 as the Crown, but I want you to understand that it 19 is actually defence evidence", and the only way 20 the jury will identify it as being of significance 21 to the defence is to hear it from the defence 22 through the mouth of a good, articulate, defence

Right. But the, at the end of the day the Crown is saying at the end of the trial, you know, "at

23

24

25

expert.

1		worst this is neutral evidence"; right, that's
2		what Mr. Caldwell said at the end of the trial?
3	A	Yes.
4	Q	And Mr. Tallis correctly pointed out that there
5		was no evidence, there was no evidence that
6		supported a match, the Crown's theory with respect
7		to, you know, the fact that blood could get into
8		the semen through an injury or illness is, you
9		know, is simply speculation, and the only
10		conclusion that can be reached on that evidence is
11		that, you know, David Milgaard is a non-secretor,
12		and that the evidence that is there is a secretor.
13		You have what you want, you have the evidence that
14		you need, and there are always problems in calling
15		experts for the defence; aren't there?
16	A	Oh
17	Q	Things can go sideways?
18	A	Absolutely.
19	Q	Like
20	A	On the other hand, you have got to make sure that
21		the jury, that they
22	Q	Well
23	A	that the tunnel vision that the jury may have
24		developed at the beginning of the trial is
25		including your arguments, and that sometimes
		•

		•
1		doesn't happen.
2	Q	But here, in this case we had a judge intervene
3		right at the material time, and point out to the
4		jury the situation?
5	A	Yes. And I mean I'm not, I'm not disagreeing with
6		you, I mean I agree entirely.
7	Q	Yeah.
8	A	I think the problem is that we know what happened,
9		and somehow or other the jury set this evidence
10		aside, and the question really is what allowed the
11		jury to set aside exculpatory evidence.
12	Q	Yeah. And if Mr. Tallis had gone out and got an
13		expert the expert may have decided to test, test
14		David Milgaard's saliva, and found out that he is
15		a secretor, and that could have happened; right?
16	А	But isn't that part of the problems associated
17		with adversarial systems. I mean that's hardly a
18		reason for not seeking an expert.
19	Q	Well, you know
20	А	Maybe I'm being naive.
21	Q	Well, you don't know whether he did seek an expert
22		or not, that's
23	A	No, all right, that's sorry.
24	Q	But the judgement call as to whether to call an
25		expert, when the Crown 's expert comes down really

1 totally in your favour, as you've pointed out, is a judgement call a defence lawyer makes, and that 2 3 in this case the serological evidence was exculpatory, it was totally favourable to David 4 5 Milgaard as led in the Crown's case; is that not what you were saying? 6 Correct. Α And so when you, as I said before, when you get 8 0 9 that result in the evidence is it fair to say that 10 the defence lawyer would not want to question the 11 integrity of the sample, it -- when you want to 12 get that evidence in, when you can get the type of 13 result that Justice Tallis ultimately obtained 14 with respect to the serological evidence? 15 Yeah, I'm sure that's correct. Α I'm really not in 16 a position to make that sort of judgement call, 17 but I can understand it. 18 But I -- as far as trying, you know, as far Q 19 as a reason why the defence would want to try and 20 keep that evidence out, it's hard to come up with 21 a reason, isn't it, they would want that evidence 22 in? 23 Α Yes, certainly. As that evidence stands, and in 24 view of the other evidence, you certainly would 25 want that evidence in.

1	Q	Yeah. And, you know, like if for instance I had
2		if I was defending him and I did this trial, or
3		let's say Mr. Tallis had you were back
4		practicing forensic pathology back in 1969 and he
5		had gone and hired you and you had given an
6		opinion, I don't think I don't think you would
7		be called, because you would be saying that the
8		sample is contaminated, and he would never get to
9		the ultimate conclusion that the Crown's expert
10		got to in this particular case because you would
11		be questioning whether you should even consider
12		the ultimate results that were obtained?
13	А	That may be correct.
14	Q	Like, I think what would have happened if the
15		defence had retained you, you would have ended up
16		being an advisor, I don't think the defence would
17		have called you, because you would have brought
18		into question whether the exhibits should be
19		considered and the value of their evidence, you
20		would say that the samples, the frozen samples
21		should not even be considered because of their
22		contamination?
23	A	Maybe
24	Q	It's right in your report.
25	A	Maybe that's why I give evidence so little and I'm

1		consulted so often.
2	Q	Right. So, you know, hiring a defence expert
3		witness here is complicated, isn't it, it's a
4		complicated decision as to whether you
5		especially when you get such favourable evidence
6		coming out
7	A	Yeah.
8	Q	in the Crown's case, as to whether you would
9		start calling expert evidence in the defence case?
10	А	I would hate to think that the experts determined
11		how the evidence is presented. I mean these are
12		tactical issues that really are in the hands of
13		the lawyers.
14	Q	Yeah. And you mentioned the fact that the jury
15		could have got tunnel vision here, but let's face
16		it, we don't know how the jury reached their
17		conclusion, reached their conclusion, but if they
18		did misunderstand the impact of that serological
19		evidence they may very well have misunderstood it
20		even if another expert was to testify; is that not
21		fair to say?
22	А	Yes.
23	Q	And, you know, I might say this; that it may have
24		been helpful and I'm sure you will agree with
25		me that if the judge at the end of the trial
		Meyer CompuCourt Reporting

1 and of course Mr. Tallis would not know the judge 2 wouldn't do this when he is calling his 3 evidence -- but at the end of the trial, if the judge in his final charge to the jury had 4 reiterated the fact that the Crown had not proven 5 that David's blood, through injury or illness, 6 could go into his semen, if the judge had reiterated that, that might have been helpful; is 9 that not fair to say? 10 Α Yes, although I presume -- I don't know what the 11 custom was in those days -- but presumably counsel 12 do have an opportunity to inform the judge of 13 issues that they think need further stressing. 14 And if counsel felt it was clear at that point 15 they wouldn't bother. Okay, well thank you very 16 much, doctor. 17 BY MS. KNOX: 18 Dr. Ferris, I just introduced myself to you during Q 19

Dr. Ferris, I just introduced myself to you during
the break. As you know, my name is Catherine
Knox, and I am counsel for the prosecutor, T.D.R.
Caldwell, and I do have some questions for you.
But contrary to your opinion, I hope I won't make
you feel like, as you suggested, that I was going
to tear you apart.

20

21

22

23

24

25

But, doctor, I was interested in

	a couple of comments that you have made in the
	course of your evidence today, and I'll paraphrase
	a bit because my note-taking is a little bit off,
	but at one point in response to questions from Mr.
	Hodson, Commission Counsel, you indicated to him
	and I think I've got your words right "I
	suppose I have an inherent distrust of trial by
	press"?
А	Yes.
Q	And I take it that's a sentiment or a belief or a
	philosophy that you have developed over the some
	40 years that you have indicated you have been
	involved in scientific work and have had some
	involvement with courts and court process and
	criminal proceedings?
A	Yes.
Q	Now, sir, you've also testified today that it was
	only a couple of weeks ago that you came into
	possession of significant documentation from the
	perspective of my client, being his opening
	address to the jury, his closing address, Mr.
	Tallis' closing address to the jury, and the
	judge's charge to the jury?
А	Yes.
Q	And I guess my question is how is it that a man of

1 your experience and a man of your discrimination -- and I'll use that word -- with respect to being 2 3 able to know that trial by press is not a good thing; how come you did not follow a first-step 4 5 prudent practice of making sure that you had possession of the full documentary record with 6 respect to these issues in this trial, if not all of the issues in the trial, before you made the 8 9 statements you made that, for many years now, have 10 called into question the competence and at some levels have called into question the ethics of 11 12 people like T.D.R. Caldwell, who you had never 13 met? Well, first of all, I am never aware of how much 14 Α 15 evidence is available, --16 Uh-huh. Q 17 -- I am only aware of the evidence that is Α 18 supplied to me, and when I asked originally for 19 all of the evidence that was relevant to the 20 forensic issues in this case I had to assume that 21 that had been provided to me. So I based my 22 opinion on that evidence, and I listed all of 23 those documents, and I presume it would have been 24 available to any of the parties interested that

the documents that you've just referred to were

1 not included in that list, and I presume if it had 2 been important, those could then have been 3 They were first provided to me provided to me. within the last couple of weeks, which is over 20 4 5 years after that opinion. Doctor, you write that those documentations were Q 6 available and they could have been provided to 8 you, and anybody looking at your report, be it a 9 lawyer or another scientist, could tell from 10 looking at it that there would be some limitations 11 on the material that you had, and working within 12 professional circles and professional communities 13 that response makes sense, but you are aware that 14 what happened with your report is your report went 15 out into the public media? 16 But is it not correct that the transcripts А 17 of those addresses were not in fact prepared some 18 -- until some five years after I wrote my report? 19 I don't believe that to be the case. I could be 20 Maybe Commission Counsel could wrong on that. 21 assist me? 22 MR. HODSON: It's my understanding that 23 certainly with respect to Mr. Tallis' closing 24 address, it was not available until towards the 25 end of 1992 when it was prepared from shorthand

taken at the time. Mr. Caldwell's opening address was, his notes were obtained by Mr. Carlyle-Gordge in 1983, being a copy of his I believe his opening address was in the transcript that may have been provided to Dr. Ferris, may not have, I'm not sure, and certainly the charge to the jury would have been available as part of the transcript. reference I think was limited to Mr. Tallis' 10 address which would not have been available. The other ones were to my understanding. 12 А Certainly I did not see them. 13 BY MS. KNOX: 14 You did not see them, but you were aware, based on what Commission Counsel just advised us, that as 16 of about 1983, given that some of the notes were given to Mr. Carlyle-Gordge, in 1983 they were in 18 the possession of parties acting on behalf of the Milgaards and the transcripts were in their 20 possession certainly from early 1980, so well

Α Yes, but I would not have been aware of that unless someone told me.

these materials?

24

25

But, sir, as a person who by that time had been Q

before you became engaged they had possession of

1 practicing in the system for about 20 years, and I'm not sure I've got the exact numbers, I'm 2 3 borrowing from your term of about 40 years' 4 involvement, but having practiced in the system 5 for about 20 years by the time you were asked for this review, you would have known the protocol for 6 the conduct of a trial, a jury trial in particular, that there would be a documentary 8 9 record, there would be remarks made to the jury. 10 I'm sure you in your capacity as an expert perhaps on occasion have been consulted by Crowns or 11 12 defence lawyers about how to incorporate the 13 evidence that you can offer into a jury address? 14 That's correct, but I have to tell you that over Α 15 reviewing multiple transcripts of evidence in 16 multiple cases, to receive a copy of the charge to 17 the juries by either defence or Crown or even the 18 judge is not very common. Usually I'm dealing 19 specifically with the evidence of the experts as 20 it is presented and not how it is reinterpreted. 21 Now, clearly in this case it was important. 22 Dr. Ferris, I suggest to you that it was far more 23 than important, it was critical, you stood in 24 front of the TV camera at one point in time as we 25 saw today and you criticized the competence of

1		Mr. Tallis about what he should have done at a
2		trial only to find out that in fact he did the
3		very thing that you said in a public forum on
4		national TV that he should have done, didn't you?
5	A	Yes.
6	Q	Sir, with respect to other issues that were put
7		into the paper such as the article that was
8		referred to you today where one of the captions in
9		it indicated that your report proved innocence,
10		you indicated you hadn't seen that newspaper
11		article before, but you were aware, were you not,
12		how your report was being taken, and I mean no
13		disrespect by this term, but the spin that was
14		being put on it by advocates for Mr. Milgaard and
15		the consequent criticism and harm that was doing
16		to the reputations of professionals who had worked
17		on this case?
18	A	No, I was not aware of that. How would I have
19		been aware of that?
20	Q	How could you not have been aware of it?
21	A	First of all, I was not aware of it because I was
22		living and working full time in Vancouver, well
23		away from all of these press reports, and unless I
24		had received direct communication from either Mr.
25		Wolch's office or Mrs. Milgaard, I would not have

25

searched the press in order to see this. I mean, I was a full-time forensic pathologist dealing with other critical issues and this was one case, admittedly a very serious one, but the only time that I gave much thought to the case after writing that original opinion was whenever I was asked specifically about it, and you are right, that information had changed and the availability of information had changed, but at no time was I made aware of that additional information or given an opportunity to consider it. If I had sought it, you are correct, it might well have affected what 13 I said, and I'm sorry if in not seeking that I 14 have said the wrong things and offended people. 15 That certainly was never my intention. 16 Sir, did you not agree when you were contacted by Q Mr. Asper to co-operate in the publication of some 18 materials from your report? Mr. Hodson showed you 19 a letter where you were advised that your name was 20 being given to reporters and presumably by implication permission had been given to them to 22 contact you. Did you not react to that and say 23 hold on a minute, I only commented or I only reviewed one aspect of this case, I'm in no position to be commenting on the big picture?

1	А	No, because the context of my opinion was clearly
2		defined within the opinion.
3	Q	Sir, in the news clip that we saw where you spoke
4		on, one of the TV clips that Mr. Hodson showed
5		you, you commented on more than the forensic
6		evidence, you commented on the other evidence, and
7		I've lost my place in the notes, but you commented
8		on the frailties of eye witness testimony, you
9		commented on different aspects of the Crown case,
10		but what I hear from your evidence today, you had
11		no knowledge of it except that which was being fed
12		to you by advocates for Mr. Milgaard?
13	А	Correct.
14	Q	And as a scientist you saw, or obviously you
15		didn't see that as a bar to preventing you from
16		passing your opinion when you are being consulted
17		as an expert on areas of evidence that you hadn't
18		a clue about in terms of his reliability,
19		credibility, except for third-hand information
20		from advocates for the accused?
21	А	Well, what I was stating in those comments was
22		what my understanding was. I don't think I stated
23		that this was factual evidence.
24	Q	Dr. Ferris, in fairness, when you appear in front
25		of a TV camera and you are identified as a doctor,

1		a forensic pathologist, do you not consider that
2		the impression that goes with your credentials and
3		your qualifications is one that will cause the
4		public to perhaps give more weight to what's
5		coming from you than if those words came out of
6		Joyce Milgaard or David Asper or others?
7	A	I suppose it might, but it's not something that I
8		actually think usually about. I don't think I
9		have that influence.
10	Q	Based on the way the media used your report in
11		this case, have you had reason to think that maybe
12		you do have that kind of influence by virtue of
13		your professional expertise?
14	А	I might do in some cases, but, you know, it's not
15		very often that what I say either in court or out
16		of court ever gets reported.
17	Q	Doctor, if we could bring up document 153446,
18		please, this is a transcript of what I believe is
19		the Pamela Wallin tape that Mr. Hodson had played
20		for you this afternoon, and if I could skip to
21		page 159448, please, I draw your attention to this
22		paragraph which is a response that you give to the
23		reporter, and the reporter says, Dr. Ferris and
24		in the previous paragraph:
25		"Dr. Ferris was approached by Milgaard's

1		family to examine the court transcripts
2		and evidence presented at the trial. He
3		believes the semen sample discovered in
4		the snow bank four days after the murder
5		did not match Milgaard's, and that
6		the"
7		And I can't read what's, I think it's perhaps a
8		word like unreliable,
9		" the forensic evidence as presented."
10		But you see the context that the reporter framed
11		the question, she said you examined the court
12		transcripts and the evidence presented. There's
13		no limitation that you examined the forensic
14		evidence and the court transcripts to do with
15		forensic evidence only is there?
16	А	Not except at the end of the paragraph.
17	Q	And, sir, your response is:
18		"There is almost no element of the
19		entire case which does not raise some
20		questions, and the validity of the semen
21		itself"
22		You talk about the semen, that's an area of
23		concern. There's a there's some there's
24		some other areas quoted by you, one being the
25		temperature the morning that this happened,

1		that's an area of concern. A second question
2		that again I can't pick out, and I didn't make a
3		note of it, and then you go on to say:
4		"The reliability of many of the
5		witnesses. I think there are many areas
6		that certainly would give rise for
7		concern."
8		But you see, whether you intended to or not, that
9		the response you gave here was a very broad-based
10		judgment by you on the merits of the entirety of
11		the Crown case?
12	A	Well, with the exception of the last sentence
13		which talks about the issue, or other issues that
14		give rise for concern such as the reliability of
15		witnesses. All of the others are within the
16		context of the original opinion that I wrote.
17	Q	The reliability of many of the witnesses would be
18		within the parameters
19	А	That's what I say, with the exception of that, and
20		that was additional information that I had been
21		provided.
22	Q	But you didn't caveat by saying that you hadn't
23		looked at it, that you were relying on information
24		that was given to you by others?
25	А	Well, I think, as you are probably well aware,
		Mayor CampuCayet Banastina

1		interviews with the press are not quite the
2		writing of medical legal opinions.
3	Q	Exactly, sir, that's the point isn't it, what goes
4		out in the press you don't control once you start
5		talking to them do you?
6	A	Exactly.
7	Q	But the consequences for people in the system who
8		you talk about can be quite profound can't they?
9	A	You don't have to tell me that.
10	Q	Sir, when you were provided with the copies of the
11		jury address a couple of weeks ago by Mr. Hodson,
12		I understand you took the opportunity to review
13		them?
14	A	Yes, I did.
15	Q	Do you recall that there were a number of times
16		during the course of the opening address, the
17		summations and the charge by the judge where the
18		jury was cautioned that whatever was said to them
19		by Mr. Tallis, Mr. Caldwell or even the judge with
20		respect to the evidence and the facts was not
21		matters that they need be guided by, that they
22		were the judges of the facts and only they could
23		be the judges of the facts?
24	A	Correct, and I have to tell you that when I spoke
25		to Mr. Hodson, having reviewed this material, I
		Meyer CompuCourt Reporting ————————————————————————————————————
	(Certified Professional Court Reporters serving P.A., Regina & Saskatoon since 1980

1		pointed out to him that all of the areas of my
2		concern relating to that whole issue of the
3		presentation of the evidence in fact were
4		addressed in those addresses to the jury.
5	Q	So if you had had those addresses to the jury in
6		1998, Mr. Caldwell and Mr. Tallis and others might
7		not have been subjected to the criticisms, some of
8		them quite unfair that they've been subjected over
9		the course of years by people using your report,
10		as the basis to found those criticisms?
11	A	Well, I have to say that this is the first time
12		that I've heard that they were subjected to that,
13		and if I'm responsible for that, please give them
14		my sincerest apologies.
15	Q	My client would appreciate that, sir. Thank you.
16	ву	MS. McLEAN:
17	Q	Good afternoon, sir. I'm Joanne McLean, I'm
18		counsel for Joyce Milgaard as you know.
19		I want to go back to something
20		that you said this morning to Mr. Hodson just
21		I'm not entirely sure I understood your answer.
22		It was dealing with Dr. Emson and the fact that he
23		had discarded the vaginal samples taken from Miss
24		Miller's body at autopsy after determining that
25		there was in fact sperm present in the sample. Do

1 you remember those questions? 2 Α Yes. 3 And if I understand your answer, you said that you understood or you could have some understanding 4 5 about why he would have thrown them out; correct? Yes. Α 6 And I think your answer was that he thought he Q would have enough other evidence or something? 8 9 Well, what -- again, he's really the only person Α 10 that can answer these questions and I can only 11 tell you what I would have done under similar 12 circumstances, but if I had been handling those 13 samples, I would probably have looked at them for 14 the presence of sperm and I believe he did that 15 Under the microscope he probably and saw sperm. 16 also saw some red blood cells which he identified 17 as evidence of blood and that is fair enough, and 18 depending on the information that would be 19 available to me at that time, if I had been given 20 to understand that other samples were available 21 for testing, then it might have been possible to 22 discard them. Clearly I don't think I would have 23 discarded them, but I can perhaps understand how 24 he might have been misled into thinking they were

no longer of any significance.

1	Q	Okay, that's precisely my question, what other
2		samples or what other evidence are you suggesting
3		that he might have been led to believe existed?
4	А	Well, there would be first of all the clothing.
5	Q	Yes.
6	А	Which may well have had obvious stains in it at
7		that time and which Dr. Emson would have seen. He
8		may possibly have been told about the collection
9		of seminal samples from the scene, I don't know
10		whether that occurred later or not.
11	Q	It's my understanding it was later, sir.
12	A	Okay. I don't know exactly what samples he did
13		collect. He may even have collected additional
14		samples which got, that he had intended to keep
15		but which got destroyed in error. I don't know.
16		I mean, often we do swabs, we do smears and we do
17		washings and that would result in perhaps as many
18		as half a dozen samples, and it's possible that
19		you give instructions that say some of these
20		samples should be destroyed and then by mistake
21		all of them get destroyed, that could have
22		happened. I just don't know.
23	Q	Okay. So you are really suggesting some form of
24		error rather than thinking that there was an
25		additional source of material; am I correct?
	1	

1	Α	Well, I was simply offering that as one possible
2		reason, but I don't know.
3	Q	Okay. Now, you told us in response to somebody's
4		questions today that you have you have some
5		problems with an adversarial system, or have some
6		concerns with an adversarial system, and I want to
7		ask you about your interviews with the Department
8		of Justice officials after your report in 1988.
9		Did you have some concerns with the manner in
10		which Mr. Eugene Williams dealt with you?
11	Α	At the time I did, but this may I mean, as you
12		know, sometimes there can be personality issues
13		that can rise that it's hard to put your finger
14		on.
15	Q	Yeah.
16	А	But I don't think Mr. Williams particularly liked
17		me and I didn't particularly like him, and that
18		may be entirely unfair because when I read his
19		report, it's actually a pretty objective report.
20	Q	Could we go to the report, please, because I want
21		to ask you about that. I hope the number is
22		002483. Is it? Hey, I'm impressed. The report
23		starts off with, that he's there to discuss the
24		contents of your September 13th, 1988 report.
25		Now, in the first place he's there some 16 or 18
	1	•

1 months after you had filed it. Did that strike 2 you as odd, that it took from September of '88 3 until June of '90 to speak to you about your 4 report? 5 Α Well, I mean, that was out of my control. Ι think -- I believe there was a significant delay 6 between the initial approach by Mr. Wolch or Mr. 8 Asper and --9 Mr. Commissioner, the report was MS. COX: 10 completed perhaps in September of '88, but it actually wasn't filed with the application until 11 12 December of 1988. 13 BY MS. McLEAN: Yeah, that's fine, that's why I'm saying 16 to 18 14 Q 15 months instead of closer to two years. 16 The question I guess really is 17 would it have been preferable for you and do you think it would have been easier for you to discuss 18 19 your report if you had done so a little closer in 20 time to the time that you had prepared the report 21 or did it make no difference to you? 22 I don't think it really made any difference. 23 Okay. And Mr. Williams sets out the general 24 discussion that you had with him. If we could

move on to page 2. On this, this part here in the

1		centre, he's recorded you saying that you were
2		asked to review the trial evidence, not, you know,
3		as we've heard, not the addresses, just the
4		evidence at the trial, and that you made your
5		opinion on four assumptions; correct?
6	A	Yes.
7	Q	So you had the assumption that the semen was
8		human, it had the A antigen, it was not
9		contaminated by blood, David Milgaard was an A
10		non-secretor and there was no evidence that David
11		Milgaard bled, and that was because you were asked
12		to review the trial evidence on the basis of the
13		facts established at the trial and you put
14		yourself in the position of a juror hearing the
15		evidence; correct?
16	А	Essentially correct, yes.
17	Q	And Mr. Williams has set that out accurately;
18		right?
19	А	Yes.
20	Q	And then taking only those facts into account, you
21		reached the conclusion that the evidence could be
22		reasonably considered to exclude David from being
23		the perpetrator of the murder?
24	А	Yes.
25	Q	And that you were of the belief, and you discussed

1		this with Mr. Pringle, but you were of the belief
2		that the evidence should not have been admitted at
3		trial?
4	Α	Yes.
5	Q	So your assumption or your, the assumption that
6		you proceeded on was that having been admitted, it
7		would have to be not contaminated because if it
8		was contaminated, it shouldn't have been admitted;
9		right?
10	Α	Well, yes, having been admitted, then one could
11		raise the argument of contamination.
12	Q	Yes. And your view was that if contaminated, it
13		should not have been admitted?
14	A	Yes, but that presupposes that it was not
15		admitted. In fact, once it is admitted, then the
16		issue of contamination becomes an argument.
17	Q	Okay. If we can go to the last page of this.
18		Mr. Williams, just before setting out his
19		conclusion, he says:
20		"I then asked Dr. Ferris to take into
21		account the contamination and
22		indicate whether the evidence excluded
23		David Milgaard. Dr. Ferris then stated
24		that the evidence did not link David
25		Milgaard to the offence, however, you
	Ĭ	

1		
1		could not say it (the serological
2		evidence) excluded him. (Underlining
3		added)"
4		So that's Mr. Williams' emphasis there; correct?
5	A	Correct.
6	Q	And I think you told us earlier that the secretor
7		status was key to Mr. Williams?
8	A	It seemed to be at the time that I spoke to him.
9	Q	Okay. And then we go on to the conclusion where
10		he uses the quote that has, he calls it the often
11		quoted paragraph, and I presume that's from
12		submissions made by Mr. Wolch and Mr. Asper, where
13		you state that you have no reasonable doubt that
14		the blood evidence presented at the trial failed
15		to link David Milgaard with the offence and that
16		opinion has not changed in any way, sir, has it?
17	A	No, it hasn't.
18	Q	Same in 1969, 1988, 1990, 2006, that evidence did
19		not link David Milgaard with the offence?
20	A	The emphasis today, given what we know about David
21		Milgaard's secretor status, puts that evidence, if
22		it was admissible, back into the neutral position.
23		In other words, at this stage, given that we know
24		that David Milgaard is a secretor and is A
25		positive, then you can no longer say anything

1		other than that this piece of evidence neither
2		includes or excludes him, whereas I believe at the
3		time that I wrote my original opinion, based on
4		the assumption that David was a non-secretor, that
5		it could be used, as Mr. Tallis had intended it to
6		be used, to exclude him.
7	Q	And that's why I stopped reading where I did here,
8		the evidence failed to link David Milgaard with
9		the offence, that part has always been true;
10		right?
11	A	Correct.
12	Q	The part that has changed as a result of the
13		secretor status is that it could be reasonably
14		considered to exclude him from being the
15		perpetrator of the murder?
16	A	Correct.
17	Q	And that:
18		"Dr. Ferris"
19		According to Mr. Emson,
20		" provided a re-interpretation on the
21		evidence on what we now know to be a
22		fallacy."
23		And then his statement, Mr. Williams' statement:
24		"Very little, if any weight can be given
25		to a conclusion that blindly ignored the
		4

1		obvious contamination of the samples
2		that were collected. The conclusion is
3		also wrong because an essential fact
4		upon which it is based, namely, David
5		Milgaard's status as a non-secretor, has
6		not been established."
7		Does that strike you, sir, as an objective
8		rendering of your report, your interview with Mr.
9		Williams?
10	A	I think that's what Mr. Williams was saying when
11		he left my office and it certainly was not what I
12		had hoped he would understand.
13	Q	Do you consider it to be an objective assessment?
14	A	Well, it's his assessment.
15	Q	Yeah.
16	A	It would not have been mine.
17	Q	Okay. Do you think overall that we may be better
18		served in the criminal justice system by having
19		cases investigated by people who are removed from
20		the Department of Justice that has the
21		responsibility for determining whether or not a
22		case should be reviewed?
23	A	If you mean reviewed prior to trial or reviewed
24		after trial?
25	Q	After trial.

1 Α That's a -- quite seriously, that is a difficult 2 question, because part of the problem is the issue 3 of objectivity. Objectivity is, in part, in the eye of the beholder, but you can take the most 4 5 potentially biased and bigoted individual and get a very objective, carefully thought out argument. 6 Uh-huh. Q And you can take someone who is apparently 9 entirely objective and entirely independent and 10 they can just go into an investigation, quickly form a bias and look for issues that support that 11 12 bias, so I really don't think there is a hard and 13 fast rule. The only guiding, guidance might be is 14 the public perception and I doubt if the public 15 perception in Canada, or in any other jurisdiction 16 that I've worked in, is that senior, if you like, 17 bureaucrats working within a department, a 18 government department necessarily have a 19 particular bias and I would have not expected Mr. 20 Williams to have a bias. It's possible that he 21 may have had an instruction about which I know 22 nothing, but I'm sure Mr. Williams himself did not 23 go into this case with a bias unless he was 24 instructed to do so. 25 You entered this case in 1988 as a result Q

		J
1		of some pressure from my client?
2	A	Yes.
3	Q	She's the one that made the initial telephone
4		contact to you?
5	A	Yes.
6	Q	And in that conversation you had with Mrs.
7		Milgaard she was asking for DNA testing primarily;
8		am I right?
9	А	Yes.
10	Q	And did you do you recall discussing financial
11		matters with her?
12	А	Not really. I think there was an understanding
13		that there would be no charge.
14	Q	More specifically, she told you that she had no
15		money to pay for this and she was desperate?
16	А	I'm sure that's correct.
17	Q	And you agreed to do this without any charge?
18	А	Correct.
19	Q	Why?
20	А	Perhaps because I was interested, but also it
21		did if we had got a positive result or a
22		conclusion, it would have helped us in terms of
23		justifying our research laboratory, it would have
24		been another example of one of the issues that we
25		were specifically researching, but I was also well
		4

1		aware of the fact that the likelihood of getting
2		anything that would be immediately helpful was not
3		great.
4	Q	Mrs. Milgaard takes the position that, "I was
	2	
5		desperate and he helped me." Will you accept that
6		or were you hoping to get some research material?
7	A	I suspect that initially we were hoping to get
8		some material. Not research material, but
9		material that would help justify the research lab.
10	Q	Sorry.
11	A	But when it came round to reviewing the transcript
12		evidence and the other evidence, there was no
13		objective at that stage other than just personal
14		interest.
15	Q	You said earlier this morning, or yesterday
16		perhaps, that you were impressed when David was
17		willing to offer samples for DNA testing?
18	A	Yes.
19	Q	Can you expand on that?
20	A	Well their knowledge of DNA from the press at that
21		stage must have been that DNA was going to be able
22		to prove David's innocence, if he was innocent,
23		and they probably would have had no other
24		knowledge other than that; and if that was the
25		case they also knew that if David was guilty

1		and David would be the only person who would know
2		that that it was going to prove he was guilty.
3	Q	And at that time, in 1988, the only type of DNA
4		testing that was out there, so to speak, that the
5		public would be aware of would be the RFLP
6		testing, which was known as genetic
7		fingerprinting?
8	A	That's correct.
9	Q	And that is the one that effectively, at that
10		time, said that there is one person in the world
11		that could leave that genetic print?
12	A	Yes.
13	Q	And that's kind of where we are now with the
14		development of the PCR, that you can effectively
15		say that as well?
16	А	Yes. I think the statistics have become more
17		realistic, but yes, that's correct.
18	Q	Okay. But back at that time, if David is offering
19		DNA testing, offering his blood for DNA testing
20		and his mother is pushing to have it done and it's
21		going to be done, that's a real risk to be taking
22		if he is, in fact, guilty;
23	А	Correct.
24	Q	is it not? And that's what impressed you about
25		it, that he may very well not be guilty if he is
		1

		1 age 23001
1		willing to take that kind of a risk?
2	A	Yes.
3	Q	You have had some other, some involvement with
4		some other cases of what are now acknowledged to
5		be wrongful convictions, have you?
6	А	Yes, I have.
7	Q	What cases in Canada have you been involved with
8		that fit into that category?
9	A	Umm, the Ronald Dalton case from Gander; Clayton
10		Johnston from Halifax; umm, umm, Louise Reynolds
11		from Kingston, although that did not actually
12		proceed right through to trial; umm, Guy Paul
13		Morin, Ontario; umm, and I suppose this case.
14	Q	And what about outside of Canada, in any other
15		jurisdictions?
16	А	Umm, I have been involved in the Chamberlain
17		Commission of Inquiry from Australia, sometimes
18		known as the dingo baby case; I have been involved
19		in, recently, in a case from Britain, the Queen
20		versus Pauca.
21		COMMISSIONER MacCALLUM: Who?
22		MR. HARDY: <i>R versus Pauca</i> , P-A-U-C-A.
23		COMMISSIONER MacCALLUM: U-C-A?
24	А	It was in the Court of Appeal in London in
25		November and I believe is now written up in one of
	l	

the law reports.

Umm, I'm -- I have been involved in a number of cases of alleged miscarriage of justice where it has been proven that the case, in fact, was correctly tried and prosecuted, both in Britain and currently in Australia, and I have been before the Court of Appeal in New Zealand on a similar case.

BY MS. McLEAN:

- So going to the ones where they are, they fit into the wrongful conviction category, you have had access to transcripts and police reports and various things involved in those cases; haven't you?
- A Yes.
- Q And, not restricting it just to pathology, do you notice any kind of commonality amongst the cases?
- A Well each case has its own special characteristics, but there are some features that, to a greater or lesser extent, seem to keep repeating themselves.
- And, from a systemic point of view, this

 Commission is interested in the types of systemic

 problems that cause wrongful convictions and

 recommendations that can be made to avoid them, so

Meyer CompuCourt Reporting =

1		with that in mind, could you give us an idea of
2		some of the things that you say keep repeating
3		themselves?
4	A	I would say that they do, and they vary, and I
5		with due respect to Mr. Caldwell, and it probably
6		does not apply in this case
7	Q	If I could just, I don't want you to address this
8		case in particular,
9	А	No, I just
10	Q	or any. It's systemic.
11	A	I have to say that from time to time Crown or the
12		prosecution services may not be as critical of the
13		evidence that they are about to present,
14		particularly the technical scientific evidence, as
15		they might be, and I'm well aware of some cases
16		where scientific experts have been put in court
17		without any prior consultation with the
18		prosecutor. Now, clearly, that doesn't apply
19		here.
20		There are other cases where the
21		defence simply failed to research their case at
22		all, maybe for as simple reasons for financing and
23		inadequate Legal Aid support, and I know of cases
24		where that is clearly the case.
25		Then the reliability of expert

witnesses. There have been problems over the years, fortunately they are being dealt with internationally, but there are problems with regard to the reliability of expert testimony, even pathology expert testimony, and it's very hard to deal with this. I think the forensic scientists have dealt with this issue much better than forensic pathologists have.

The Association of Crime

Laboratory Directors in the United States has
established an international network for crime

laboratory standards throughout the World, and
almost all major accredited crime laboratories are
sort of covered by this mushroom of standard

laboratory testing with test results being sent
all over the world, and they are required to test
unknown samples and then compare results.

Forensic pathologists are slowly moving in that direction. The Home Office in Britain has established a Standard Code of Practice for forensic pathologists throughout Britain, and it is produced and published by the Home Office and the Royal College of Pathologists; in Ontario the, there is a Code of Practice dealing with some particular types of case

investigation for pathologists; in the United States the North American Association of Medical Examiners has recently produced a document, umm, a Code of Practice and Quality Assurance; and I have been responsible for writing a Code of Practice For Forensic Pathology and Colonial Pathology in New Zealand, and it's currently working its way through the system and is being reviewed by some of my colleagues, but even there there are problems in that some people feel that the standards that have -- that I have drawn up in New Zealand are too high, that, you know, "this is not the way we've done things over the years and why should we change". Medical people are very slow at adapting. But all I'm saying is that this

is not the way it used to be, it is improving, and it's improving significantly.

And I suppose the final question really is how the jury view the evidence, and that's often out of the control of everybody, but the one thing that is common in many of the miscarriages is that there is some quirk or issue about the defendant that has made the jury dislike them, they are either presented as being unusual,

or odd, or even the, clearly their behaviour in Court is inappropriate. And I think one very good example of that was the *Chamberlain* case in Australia where Lindy Chamberlain, in Court and in the witness box, became a very unattractive individual.

- Q So it may not have anything to do with the actual evidence led, it may just be a, at least in her case, maybe a demeanour issue?
- Well, there were major evidence issues there as well, about the reliability, in fact many in parallel with this case.
- Q Yes.

A But the point is that many of these issues are out of the control of the trial judge and the lawyers, but in terms of the presentation of the scientific evidence I'm very much in favour of having this sort of evidence tested, you know. I believe, you know, issues such as the reliability of evidence and the acceptability of evidence needs to be tested more through the voir dire system and then the judge can truly make a decision, before the jury hear the evidence, as to whether or not it's safe to let that evidence go before the jury, and can also, if he decides that it is appropriate,

1		prepare himself in such a way that he can control
2		how that evidence is heard in Court and ultimately
3		plan how he is going to address the jury and
4		advise them on its validity.
5	Q	And, also, to control how it's, how it's dealt
6		with after it's presented so that it's not
7		misconstrued by either party to the trial;
8		correct?
9	A	Yes. I mean as Mr. Caldwell's counsel pointed
10		out, you know, all of these issues in the Milgaard
11		case were in fact dealt with by counsel and the
12		judge, and therefore you may have to recognize
13		that the issue that I have been dealing with may
14		well have been simply set aside by the jury.
15	Q	Uh-huh?
16	A	And although it could have been interpreted as
17		excluding David, if they choose chose to set
18		that evidence aside, then there is other evidence
19		that really gave them little choice with regard to
20		their verdict.
21	Q	And what do you mean there?
22	A	Well, the evidence of the witnesses that has later
23		been shown to be unreliable was pretty damning.
24	Q	And you are referring, there, to the witnesses
25		Nichol John, Ron Wilson, Albert Cadrain?
	I	

		1 age 23000
1	А	Yes. I have to again say that I am not, I've
2		never read the transcripts of their evidence, but
3		I've heard it discussed and I've heard it
4		discussed amongst the lawyers.
5	Q	Finally, sir, do you have any familiarity with the
6		Criminal Cases Review Commission set up in the
7		United Kingdom?
8	A	Yes, I'm aware of some of the people involved in
9		that.
10	Q	And
11		COMMISSIONER MacCALLUM: Criminal justice
12		review commission, is it?
13		MS. McLEAN: It's the Criminal Cases Review
14		Commission.
15		COMMISSIONER MacCALLUM: Okay.
16		BY MS. McLEAN:
17	Q	Have they got around to setting one up in New
18		Zealand yet?
19	A	No. It's on the agenda to be discussed by the new
20		government but I suspect that's as far as it will
21		go. There are various claims that there may be as
22		many as 40 cases in New Zealand that could be
23		submitted to such a commission, I simply have no
24		idea.
25	Q	Okay. And you understand that the way the
		Meyer CompuCourt Reporting

	commission works is that there are well,
	actually, maybe it's better if you tell us what
	your understanding is of how it works.
A	Well, in essence, they bring in a series of
	experts who are appropriate to the particular case
	involved, and they will review it independently
	and submit reports, and I think they go through
	the Commission to the Home Office and presumably,
	ultimately, will go through the Crown prosecution
	service and maybe finally to the Attorney General.
	I'm not sure of how the ultimate process is.
Q	Okay. The Criminal Cases Review Commission will
	actually have applications made to it as opposed
	to a Home Office, you understand that,
A	Yes I do.
Q	as opposed to the old system? And that the
	investigation is done by the staff, the employees
	and the material of the manual of the Quining
	or the retainers of the people at the Criminal
	Cases Review Commission, as opposed to an
	Cases Review Commission, as opposed to an
A	Cases Review Commission, as opposed to an applicant having to hire an expert; do you
A Q	Cases Review Commission, as opposed to an applicant having to hire an expert; do you understand that?
	Cases Review Commission, as opposed to an applicant having to hire an expert; do you understand that? Yes I do.
	Q A

1	A	Umm, absolutely. But you must also remember that,
2		for example with regard to forensic pathology, any
3		forensic pathologist that is advising the review
4		commission will also be, already, a Home Office
5		pathologist.
6	Q	And is that a problem?
7	A	No, it's not a problem, but it relies upon the
8		integrity of that pathologist and a recognition,
9		by him or her that they are independent of any
10		agency, even though they are retained by the Home
11		Office.
12	Q	And in cases where the expert is a non-pathologist
13		do you have any awareness of where those experts
14		come from?
15	A	It will depend. They may be privately retained.
16		There are a number of forensic scientists within
17		Britain, and the Forensic Science Service itself
18		is now an arm's length agency of the Home Office,
19		they are no longer Home Office laboratories
20	Q	Uh-huh?
21	Α	and there are other large, private forensic
22		laboratory services that are available. But most
23		forensic experts, regardless of their specialty,
24		see themselves as independent even though they may
25		be receiving their salary from one side or the
		1

		Page 23611 —————
1		other or from government.
2	Q	And when you were doing your report for the
3		Milgaards and looking at the DNA and looking at
4		the case in general terms, you had some real
5		concerns about the location of the body versus the
6		location of the crime scene, correct?
7	A	Umm, yes. But, again, I have never been given
8		access to all of the information that I would like
9		with regard to the crime scene.
10	Q	Yes, but you had some concerns?
11	A	Yes.
12	Q	You had some concerns about a rape taking place at
13		minus 40 degree weather,
14	A	Yes.
15	Q	notwithstanding that apparently it happened;
16		you expressed in your report some concerns about a
17		complicated scene having to do with what must have
18		happened to Gail Miller to result in her having
19		stab wounds to her body, stab holes in her coat,
20		and yet nothing on the dress?
21	А	Yeah.
22	Q	That was an issue that
23	A	Yes.
24	Q	Okay. And it's not really what you were
25		specifically retained to look at, it's just
		and the second s

1		something that caused you some kind of concern
2		there?
3	А	That's right. And they were included in my report
4		simply to identify issues that Mr. Wolch might
5		wish to follow up with other people if
6		appropriate.
7	Q	And do you understand that the composition of the
8		Criminal Cases Review Commission, in addition to
9		hiring experts and funding the same, would also
10		have investigators there that will go and speak to
11		witnesses, interview witnesses, review the
12		evidence from the trial, review the theories
13		offered at trial and the theories consistent with
14		guilt and with innocence, and render their
15		recommendations to the Court of Appeal based on a
16		full investigation that they have done?
17	A	Yes.
18	Q	And do you think that would be a good idea,
19		generally, to have in a criminal justice system
20		that does make mistakes?
21	A	Umm, I think it could be, but there may be an
22		intermediate or an interim phase that needs to be
23		considered.
24	Q	Uh-huh?
25	А	And again, I'm not a lawyer, but within our system
		.

1 it is very unusual in any appeal court process, in 2 other words where the case is subject to further 3 review by a higher court, --4 Yes? 0 -- for the scientific evidence to be looked at 5 Α unless there is clear evidence of new evidence. 6 Simple criticism of scientific evidence alone is 8 usually not grounds for appeal. Appeal is made 9 purely on the basis of the legal issues, as I 10 understand it, and yet in two of the appeal Court cases that I have been involved in in the last two 11 12 years I have actually been called to address the 13 issue of reinterpretation of the medical and 14 pathological evidence that was presented in Court. 15 It was presented as so-called new evidence, but to 16 some extent that was a term that was really an 17 excuse for an opportunity to review the case, and 18 it may be that we should make the process of 19 complete case review a little bit easier and more 20 acceptable to the appeal court system. 21 Q Or to -- or as an intermediate step where you 22 don't require what could be an insurmountable 23 hurdle of coming up with fresh evidence before you 24 can have a case looked at again? 25 Α Remember that the Criminal Case Review Yes.

1		Commission is designed to review cases that have
2		already gone through all of the system and have
3		essentially failed.
4	Q	Yes.
5	A	And what I am suggesting to you is that maybe the
6		system itself can adopt some of those principles
7		in the step to the appeal court.
8	Q	How would you address the floodgates argument that
9		I would anticipate coming there, like wouldn't,
10		wouldn't you have the courts swamped with people
11		who have a pending appeal and then want to have
12		their appeal re-looked at and
13	А	Well, again, isn't there a general principle that
14		there have to be reasonable grounds?
15	Q	Yeah, but some who's going to be, who's going
16		to be making the assessment of the reasonable
17		grounds?
18	А	Well you'll have to, again, rely on the integrity
19		of the scientists, the pathologists, and the
20		lawyers.
21	Q	Okay. Overall, sir, are there any, any other
22		recommendations or insights you can offer, based
23		on your involvement in this case or your general
24		knowledge of wrongful conviction cases?
25	А	I don't think so. I think there are many issues
		1

1 that can be dealt with on an individual case 2 basis. 3 Thank you, sir, and thank you for your 4 involvement. 5 COMMISSIONER MacCALLUM: I just have, if there is no further cross-examination, I have a 6 question for the doctor. 8 Doctor, the objection is often 9 heard that juries are not suitable vehicles for 10 finding of facts in cases where complicated scientific evidence must be understood. 11 12 leave that question aside, I'm not going to 13 trouble you with it. But to bring the matter 14 closer to home, in a jury trial it is the 15 responsibility of the judge to make sure, as far 16 as he can, that the jury understands. 17 Now I don't often get the 18 chance to ask somebody with 40 years experience, 19 being a scientist, what his perception is, but 20 I'm going to ask you, and don't be shy about 21 replying, please. What do you think, in general, 22 about the performance of judges in adequately 23 explaining forensic scientists/science to jurors? 24 Umm, I have to say that generally I think judges

do it extremely well.

25

Umm, I -- I have to say that I'm not quite sure what would happen if the issue relating to expert testimony gets to where it is in some parts of United States where, in fact, the judge effectively acts as the gatekeeper for the admissibility of all scientific testimony and there are very specific criteria for the admission of that evidence. I think that requires a level of understanding not just of the import of the evidence, but even the scientific process, which even the scientists often don't agree on.

COMMISSIONER MacCALLUM: Well I believe I'm familiar with the subject, I believe it arose in

familiar with the subject, I believe it arose in the United States District Court, and I can't remember the name of the case but it received a lot of attention, and it was concerned mainly with so-called experts chiefly in the soft sciences, and it -- the burden of it was that judges should not just take qualifications of an expert and allow them to express an opinion simply because they have had a lot of training in their field, which might be not a worthy field of expertise at all. I think there's -- that that, that question has been addressed well enough. We don't have enough of it in this country, in my

1		opinion, but is that what you are referring to?
2	А	Yes it is.
3		COMMISSIONER MacCALLUM: Yeah, okay, thank
4		you.
5		MR. HODSON: With that, I think that is
6		all.
7		If I could pass on my thanks to
8		you, Dr. Ferris, for your cooperation not only in
9		your discussions with me, but changing your
10		travel arrangements to be here in person to give
11		your evidence, which is far better than by
12		telephone. So thank you very much for
13		accommodating us.
14	А	Thank you.
15		COMMISSIONER MacCALLUM: And thank you, Dr.
16		Ferris, and you are excused.
17	А	Okay.

23608:12, 23608:23,	comparisons [1] - 23397:19
23608:12, 23608:23, 23609:1, 23610:4	comparisons [1] - 23397:19 compelling [2] -
23608:12, 23608:23, 23609:1, 23610:4 Commission [18] -	comparisons [1] - 23397:19 compelling [2] - 23487:6, 23504:6
23608:12, 23608:23, 23609:1, 23610:4	comparisons [1] - 23397:19 compelling [2] - 23487:6, 23504:6 competence [2] -
23608:12, 23608:23, 23609:1, 23610:4 Commission [18] - 23358:2, 23358:14, 23359:1, 23359:2,	comparisons [1] - 23397:19 compelling [2] - 23487:6, 23504:6 competence [2] - 23576:10, 23579:25
23608:12, 23608:23, 23609:1, 23610:4 Commission [18] - 23358:2, 23358:14,	comparisons [1] - 23397:19 compelling [2] - 23487:6, 23504:6 competence [2] - 23576:10, 23579:25 complete [4] - 2341:
23608:12, 23608:23, 23609:1, 23610:4 Commission [18] - 23358:2, 23358:14, 23359:1, 23359:2, 23359:9, 23418:25,	comparisons [1] - 23397:19 compelling [2] - 23487:6, 23504:6 competence [2] - 23576:10, 23579:25
23608:12, 23608:23, 23609:1, 23610:4 Commission [18] - 23358:2, 23358:14, 23359:1, 23359:2, 23359:9, 23418:25, 23575:5, 23577:20,	comparisons [1] - 23397:19 compelling [2] - 23487:6, 23504:6 competence [2] - 23576:10, 23579:25 complete [4] - 23412 23463:18, 23472:25 23613:19
23608:12, 23608:23, 23609:1, 23610:4 Commission [18] - 23358:2, 23358:14, 23359:1, 23359:2, 23359:9, 23418:25, 23575:5, 23577:20, 23578:15, 23601:17,	comparisons [1] - 23397:19 compelling [2] - 23487:6, 23504:6 competence [2] - 23576:10, 23579:25 complete [4] - 2341- 23463:18, 23472:25 23613:19 completed [4] -
23608:12, 23608:23, 23609:1, 23610:4 Commission [18] - 23358:2, 23358:14, 23359:1, 23359:2, 23359:9, 23418:25, 23575:5, 23577:20, 23578:15, 23601:17, 23602:23, 23608:6,	comparisons [1] - 23397:19 compelling [2] - 23487:6, 23504:6 competence [2] - 23576:10, 23579:25 complete [4] - 23412 23463:18, 23472:25 23613:19
23608:12, 23608:23, 23609:1, 23610:4 Commission [18] - 23358:2, 23358:14, 23359:1, 23359:2, 23359:9, 23418:25, 23575:5, 23577:20, 23578:15, 23601:17, 23602:23, 23608:6, 23608:14, 23609:8, 23609:12, 23609:19, 23612:8, 23614:1	comparisons [1] - 23397:19 compelling [2] - 23487:6, 23504:6 competence [2] - 23576:10, 23579:25 complete [4] - 2341- 23463:18, 23472:25 23613:19 completed [4] - 23496:2, 23532:4,
23608:12, 23608:23, 23609:1, 23610:4 Commission [18] - 23358:2, 23358:14, 23359:1, 23359:2, 23359:9, 23418:25, 23575:5, 23577:20, 23578:15, 23601:17, 23602:23, 23608:6, 23608:14, 23609:8, 23609:12, 23609:19, 23612:8, 23614:1 Commissioner [23] -	comparisons [1] - 23397:19 compelling [2] - 23487:6, 23504:6 competence [2] - 23576:10, 23579:25 complete [4] - 2341- 23463:18, 23472:25 23613:19 completed [4] - 23496:2, 23532:4, 23562:22, 23591:10
23608:12, 23608:23, 23609:1, 23610:4 Commission[18] - 23358:2, 23358:14, 23359:1, 23359:2, 23359:9, 23418:25, 23575:5, 23577:20, 23578:15, 23601:17, 23602:23, 23608:6, 23608:14, 23609:8, 23609:12, 23609:19, 23612:8, 23614:1 Commissioner[23] - 23362:3, 23370:18,	comparisons [1] - 23397:19 compelling [2] - 23487:6, 23504:6 competence [2] - 23576:10, 23579:25 complete [4] - 2341- 23463:18, 23472:25 23613:19 completed [4] - 23496:2, 23532:4, 23562:22, 23591:10 completely [5] -
23608:12, 23608:23, 23609:1, 23610:4 Commission[18] - 23358:2, 23358:14, 23359:1, 23359:2, 23359:9, 23418:25, 23575:5, 23577:20, 23578:15, 23601:17, 23602:23, 23608:6, 23608:14, 23609:8, 23609:12, 23609:19, 23612:8, 23614:1 Commissioner[23] - 23362:3, 23370:18, 23391:24, 23392:13,	comparisons [1] - 23397:19 compelling [2] - 23487:6, 23504:6 competence [2] - 23576:10, 23579:25 complete [4] - 2341- 23463:18, 23472:25 23613:19 completed [4] - 23496:2, 23532:4, 23562:22, 23591:10 completely [5] - 23379:6, 23411:7,
23608:12, 23608:23, 23609:1, 23610:4 Commission[18] - 23358:2, 23358:14, 23359:1, 23359:2, 23359:9, 23418:25, 23575:5, 23577:20, 23578:15, 23601:17, 23602:23, 23608:6, 23608:14, 23609:8, 23609:12, 23609:19, 23612:8, 23614:1 Commissioner[23] - 23362:3, 23370:18, 23391:24, 23392:13, 23403:2, 23407:25,	comparisons [1] - 23397:19 compelling [2] - 23487:6, 23504:6 competence [2] - 23576:10, 23579:25 complete [4] - 2341- 23463:18, 23472:25 23613:19 completed [4] - 23496:2, 23532:4, 23562:22, 23591:10 completely [5] - 23379:6, 23411:7, 23442:25, 23498:12
23608:12, 23608:23, 23609:1, 23610:4 Commission[18] - 23358:2, 23358:14, 23359:1, 23359:2, 23359:9, 23418:25, 23575:5, 23577:20, 23578:15, 23601:17, 23602:23, 23608:6, 23608:14, 23609:8, 23609:12, 23609:19, 23612:8, 23614:1 Commissioner[23] - 23362:3, 23370:18, 23391:24, 23392:13, 23403:2, 23407:25, 23408:3, 23415:1,	comparisons [1] - 23397:19 compelling [2] - 23487:6, 23504:6 competence [2] - 23576:10, 23579:25 complete [4] - 2341- 23463:18, 23472:25 23613:19 completed [4] - 23496:2, 23532:4, 23562:22, 23591:10 completely [5] - 23379:6, 23411:7, 23442:25, 23498:12 23526:19 complex [1] - 23423 complicated [4] -
23608:12, 23608:23, 23609:1, 23610:4 Commission[18] - 23358:2, 23358:14, 23359:1, 23359:2, 23359:9, 23418:25, 23575:5, 23577:20, 23578:15, 23601:17, 23602:23, 23608:6, 23608:14, 23609:8, 23609:12, 23609:19, 23612:8, 23614:1 Commissioner[23] - 23362:3, 23370:18, 23391:24, 23392:13, 23403:2, 23407:25, 23408:3, 23415:1, 23459:12, 23459:14,	comparisons [1] - 23397:19 compelling [2] - 23487:6, 23504:6 competence [2] - 23576:10, 23579:25 complete [4] - 2341- 23463:18, 23472:25 23613:19 completed [4] - 23496:2, 23532:4, 23562:22, 23591:10 completely [5] - 23379:6, 23411:7, 23442:25, 23498:12 23526:19 complex [1] - 23423 complicated [4] - 23573:3, 23573:4,
23608:12, 23608:23, 23609:1, 23610:4 Commission[18] - 23358:2, 23358:14, 23359:1, 23359:2, 23359:9, 23418:25, 23575:5, 23577:20, 23578:15, 23601:17, 23602:23, 23608:6, 23608:14, 23609:19, 23612:8, 23614:1 Commissioner[23] - 23362:3, 23370:18, 23391:24, 23392:13, 23403:2, 23407:25, 23408:3, 23415:1, 23459:12, 23459:14, 23506:7, 23506:9,	comparisons [1] - 23397:19 compelling [2] - 23487:6, 23504:6 competence [2] - 23576:10, 23579:25 complete [4] - 2341- 23463:18, 23472:25 23613:19 completed [4] - 23496:2, 23532:4, 23562:22, 23591:10 completely [5] - 23379:6, 23411:7, 23442:25, 23498:12 23526:19 complex [1] - 23423 complicated [4] - 23573:3, 23573:4, 23611:17, 23615:10
23608:12, 23608:23, 23609:1, 23610:4 Commission[18] - 23358:2, 23358:14, 23359:1, 23359:2, 23359:9, 23418:25, 23575:5, 23577:20, 23578:15, 23601:17, 23602:23, 23608:6, 23608:14, 23609:8, 23609:12, 23609:19, 23612:8, 23614:1 Commissioner[23] - 23362:3, 23370:18, 23391:24, 23392:13, 23403:2, 23407:25, 23408:3, 23415:1, 23459:12, 23459:14, 23506:7, 23506:9, 23550:3, 23554:25,	comparisons [1] - 23397:19 compelling [2] - 23487:6, 23504:6 competence [2] - 23576:10, 23579:25 complete [4] - 2341. 23463:18, 23472:25 23613:19 completed [4] - 23496:2, 23532:4, 23562:22, 23591:10 completely [5] - 23379:6, 23411:7, 23442:25, 23498:12 23526:19 complex [1] - 23423 complicated [4] - 23573:3, 23573:4, 23611:17, 23615:10 composition [1] -
23608:12, 23608:23, 23609:1, 23610:4 Commission[18] - 23358:2, 23358:14, 23359:1, 23359:2, 23359:9, 23418:25, 23575:5, 23577:20, 23578:15, 23601:17, 23602:23, 23608:6, 23608:14, 23609:8, 23609:12, 23609:19, 23612:8, 23614:1 Commissioner[23] - 23362:3, 23370:18, 23391:24, 23392:13, 23403:2, 23407:25, 23408:3, 23415:1, 23459:12, 23459:14, 23506:7, 23506:9, 23550:3, 23554:25, 23591:9, 23601:21,	comparisons [1] - 23397:19 compelling [2] - 23487:6, 23504:6 competence [2] - 23576:10, 23579:25 complete [4] - 2341: 23463:18, 23472:25 23613:19 completed [4] - 23496:2, 23532:4, 23562:22, 23591:10 completely [5] - 23379:6, 23411:7, 23442:25, 23498:12 23526:19 complex [1] - 23423 complicated [4] - 23573:3, 23573:4, 23611:17, 23615:10 composition [1] - 23612:7
23608:12, 23608:23, 23609:1, 23610:4 Commission[18] - 23358:2, 23358:14, 23359:1, 23359:2, 23359:9, 23418:25, 23575:5, 23577:20, 23578:15, 23601:17, 23602:23, 23608:6, 23608:14, 23609:8, 23609:12, 23609:19, 23612:8, 23614:1 Commissioner[23] - 23362:3, 23370:18, 23391:24, 23392:13, 23403:2, 23407:25, 23408:3, 23415:1, 23459:12, 23459:14, 23506:7, 23506:9, 23550:3, 23554:25,	comparisons [1] - 23397:19 compelling [2] - 23487:6, 23504:6 competence [2] - 23576:10, 23579:25 complete [4] - 2341. 23463:18, 23472:25 23613:19 completed [4] - 23496:2, 23532:4, 23562:22, 23591:10 completely [5] - 23379:6, 23411:7, 23442:25, 23498:12 23526:19 complex [1] - 23423 complicated [4] - 23573:3, 23573:4, 23611:17, 23615:10 composition [1] - 23612:7 concentrations [1]
23608:12, 23608:23, 23609:1, 23610:4 Commission[18] - 23358:2, 23358:14, 23359:1, 23359:2, 23359:9, 23418:25, 23575:5, 23577:20, 23578:15, 23601:17, 23602:23, 23608:6, 23608:14, 23609:8, 23609:12, 23609:19, 23612:8, 23614:1 Commissioner[23] - 23362:3, 23370:18, 23391:24, 23392:13, 23403:2, 23407:25, 23408:3, 23415:1, 23459:12, 23550:3, 23554:25, 23591:9, 23601:21, 23601:23, 23601:21, 23601:23, 23608:11,	comparisons [1] - 23397:19 compelling [2] - 23487:6, 23504:6 competence [2] - 23576:10, 23579:25 complete [4] - 2341: 23463:18, 23472:25 23613:19 completed [4] - 23496:2, 23532:4, 23562:22, 23591:10 completely [5] - 23379:6, 23411:7, 23442:25, 23498:12 23526:19 complex [1] - 23423 complicated [4] - 23573:3, 23573:4, 23611:17, 23615:10 composition [1] - 23612:7 concentrations [1] -
